

TYPES OF OPTICAL FIBERS

- ✦ It is necessary to consider the various optical fibers currently available.
- ✦ It is interesting to note, however, that although the high performance values quoted are for fibers produced and tested in the lab, the performance characteristics of commercially available fibers in many cases are now very close to these values indicating improvements made over recent years in the fiber materials preparation technologies.
- ✦ In particular, high performance silica based fibers for operation in 3 major wavelength regions (0.8 to 0.9, 1.3 & 1.55 μm) are now widely commercially available.
