Reality Based Real Estate Investing John Mazzara, 2008-03-13. Real Estate investing has been a tried and true path to accumulating wealth. It is also a lot of work. There are many unseen pitfalls and risks. John Mazzara has successfully sold, owned, managed, and financed investment properties since 1986. Experience counts. John provides you with direction and recommendations so that you can correctly identify opportunities in today's real estate investing marketplace. There are real-life examples from the trenches. Unlike other books, you will be given an overview of the big picture so that you can put it all together: goals, creation, property selection, holding period, considerations, tax strategies, correct financing, proper insurance, and tenant management. The book title refers to reality-based investing because too many books base their information on unrealistic assumptions or gloss over the work involved to become successful. This information is applicable to landlords and budding real estate entrepreneurs everywhere.

Applications of Immersive Technology in Architecture, Engineering and Construction Abhinesh Prabhakaran, Abdul-Majeed Mahamadu, Colin A. Booth, Patrick Manu, 2025-06-27. This edited book addresses a gap in literature by advancing current understandings of the applications of immersive technology within the architecture, engineering, and construction (AEC) sector. Globally, the architecture, engineering, and construction (AEC) sector makes an enormous contribution to the socio-economic development of nations, which is primarily evidenced by its creation, provision of the built environment. The sector has, however, often been criticised for inefficiencies, waste, and diverse forms of adverse impacts that are associated with the lifecycle of the provision of built assets: design, construction, operations, and maintenance, and end-of-life phases. Over the years, the inefficiencies, waste, and adverse impacts have often been a catalyst for calls and initiatives to transform the AEC sector. The advent of the fourth industrial revolution, commonly referred to as Industry 4.0, which entails the automation and digitalisation of production, presents opportunities to leverage emerging technologies to improve the image and productivity of the sector. Prominent among the emerging technologies in the Industry 4.0 era is that of immersive technology, which includes virtual reality, mixed reality, and augmented reality. The capability of immersive technology to deliver beneficial impacts for multiple construction sector stakeholders throughout the construction lifecycle has been acknowledged within the industry, and this continues to stimulate interest amongst practitioners, policymakers, and researchers. Despite this phenomenon, at present, there is no dedicated compendium of research-informed text that focusses on the multifaceted applications of immersive technology.

throughout the lifecycle of the provision of built assets right from concept design to end of life This book thus addresses this gap in literature by advancing current understanding of the applications of immersive technology within the AEC industry Readers will understand how the technologies are applied the resulting array of impacts including benefits drawbacks challenges and future directions for applications research and development
