Argument Dialectics: The Place of Reasons in Logic Hubert Marraud, 2025-06-12 This book is a systematic exposition of Argument Dialectics AD Despite its name argument dialectics is a logical approach to argumentation theory AD stands out among theories of argument because of three unusual features it is reasons based holistic and particularistic This implies that AD conceives of logic as a theory of the dialectical construction of reasons not as a theory of inferences Consequently contrary to other logical approaches AD focuses on the study of inter argumentative relations especially those of opposition and weighing The book makes an extensive use of the theory of reasons a branch of metaethics that has been a very valuable quarry of intuitions and concepts for the elaboration of a reason based theory of argument The oppositions generalism particularism and atomism holism proposed by Jonathan Dancy which play a central role in the book and in the development of AD have been adapted from the theory of reasons and the same can be said of the distinction between different statuses of reasons that AD associates with different kinds of counterarguments Conceiving of the theory of argument in terms of reasons has the effect of situating the paradigm of argumentation in practical argumentation reasoning about what to do rather than in theoretical argumentation about what to believe as inference based theories do Hence this book is of interest to argumentation theorists communication theorists epistemologists linguists moral philosophers and philosophers of law

argumentation are covered in an exhaustive and critical fashion and are analysed in connection with more general types and problems of reasoning Accordingly the subject matter of the handbook divides in three parts The first one introduces and discusses the basic concepts of practical reasoning The second one discusses the general structures and procedures of reasoning and argumentation that are relevant to legal discourse The third one looks at their instantiations and developments of these aspects of argumentation as they are put to work in the law in different areas and applications of legal reasoning

Gage, 2006 This brief rhetoric of argument teaches critical reading informal reasoning and writing as reasoned inquiry and now features a new collection of student arguments The Shape of Reason emphasizes the enthymeme as the central basis for the invention and structuring of arguments This approach blends classical insights into rhetorical reasoning with contemporary understandings of the composing process as generative and organic situated within discourse communities The book helps students understand argument as inquiry stressing the responsibility that writers

Argument and Inference Gregory Johnson, 2017-01-06 A thorough and practical introduction to inductive logic with a focus on arguments and the rules used for making inductive inferences This textbook offers a thorough and practical introduction to inductive logic The book covers a range of different types of inferences with an emphasis throughout on representing them as arguments This allows the reader to see that although the rules and guidelines for making each type of inference differ the purpose is always to generate a probable conclusion After explaining the basic features of an argument and the different standards for evaluating arguments the book covers inferences that do not require precise probabilities or the probability calculus the induction by confirmation inference to the best explanation and Mill's methods The second half of the book presents arguments that do require the probability calculus first explaining the rules of probability and then the proportional syllogism inductive generalization and Bayes rule Each chapter ends with practice problems and their solutions Appendixes offer additional material on deductive logic odds expected value and very briefly the foundations of probability **Argument and Inference** can be used in critical thinking courses It provides these courses with a coherent theme while covering the type of reasoning that is most often used in day to day life and in the natural social and medical sciences **Argument and Inference** is also suitable for inductive logic and informal logic courses as well as philosophy of sciences courses that need an introductory text on scientific and inductive methods

Rigour and Reason: Essays in Honour of Hans Vilhelm Hansen J. Anthony Blair , Christopher W. Tindale, 2020-06-11 Built in the centre of Copenhagen and noted for its equestrian stairway the Rundetaarn Round Tower was intended as an astronomical observatory Part of a complex of buildings that once included a university library it affords expansive views of the city in every direction towering above what surrounds it The metaphor of the towering figure who sees what others might not whose vantage point allows him to visualize how things fit together and who has an earned stature of respect and authority fits another Danish stalwart Hans Vilhelm Hansen whose contributions to the fields of informal logic and argument theory have earned the gratitude of his colleagues and inspired this collection of essays written to express the appreciation of its authors and of the many many colleagues they represent

Goal-based Reasoning for Argumentation Douglas Walton, 2015-08-25 Practical argumentation is intelligent reasoning from an agent's goals and known circumstances and from an action selected as a means to arrive at a decision on what action to take This book will appeal to a wide audience from designers of multi agent and robotics systems to social scientists

The Fundamentals of Argument Analysis Richard L Epstein, 2018-11-05 This series of books presents the fundamentals of logic in a style accessible to both students and scholars The text of each essay presents a story the main line of development of the ideas while the notes and appendices place the research within a larger scholarly context The essays

overlap forming a unified analysis of logic as the art of reasoning well yet each essay is designed so that it may be read independently The question addressed in this volume is how we can justify our beliefs through reasoning The first essay Arguments investigates what it is that we call true or false and how we reason toward truths through arguments A general theory of argument analysis is set out on the basis of what we can assume about those with whom we reason The next essay Fallacies explains how the classification of an argument as a fallacy can be used within that general approach In contrast there is no agreement on what the terms induction and deduction mean and they are not useful in evaluating arguments as shown in Induction and Deduction In reasoning to truths in the end we must take some claims as basic not requiring any justification for accepting them How we choose those claims and how they affect our reasoning is examined in Base Claims The essay Analogies considers how comparisons can be used as the basis of arguments arguing from similar situations to similar conclusions An important use of analogies is in reasoning about the mental life of other people and things which is examined in Subjective Claims written with Fred Kroon and William S Robinson Generalizing examines how to argue from part of a collection or mass to the whole or a larger part The question there is whether we are ever justified in accepting such an argument as good Probabilities sets out the three main ways probability statements have been interpreted the logical relation view the frequency view and the subjective degree of belief view Each of those is shown to be inadequate to make precise the scale of plausibility of claims and the scale of the likelihood of a possibility Many discussions of how to reason well and what counts as good reason are given in terms of who or what is rational In the final essay Rationality it is shown that what we mean by the idea of someone being rational is of very little use in evaluating reasoning or actions This volume is meant to give a clearer idea of how to reason well setting out methods of evaluation that are motivated in terms of our abilities and interests At the ground of our reasoning though are metaphysical assumptions too basic and too much needed in our reasoning for us to justify them through reasoning But we can try to uncover those assumptions to see how they are important and what depends on them

Creating a Shared Morality Heather Salazar, 2021-10-18 In Creating a Shared Morality Heather Salazar develops a consistent and plausible account of ethical constructivism that rivals the traditional metaethical theories of realism and subjectivism without lapsing into subjectivism as do previous constructivist attempts Salazar's Enlightenment argues that all people have moral obligations and that if they reflect well they will naturally come to care about others as extensions of themselves Enlightenment resolves difficulties within constructivism builds bridges between the two traditional Western views of metaethics and employs concepts from Eastern Buddhist philosophy It embraces universal morality while elevating the importance of autonomy diversity and connectedness Constructivist enlightenment entails understanding the interdependence of people on others such that we are all co responsible for the world in which we live
