Recent Advances In Parsing Technology:

Recent Advances in Parsing Technology H. Bunt, Masaru Tomita, 1996-08-31 In Marcus 1980 deterministic parsers were introduced These are parsers which satisfy the conditions of Marcus's determinism hypothesis i.e they are strongly deterministic in the sense that they do not simulate non determinism in any way In later work Marcus et al 1983 these parsers were modified to construct descriptions of trees rather than the trees themselves The resulting D theory parsers by working with these descriptions are capable of capturing a certain amount of ambiguity in the structures they build In this context it is not clear what it means for a parser to meet the conditions of the determinism hypothesis The object of this work is to clarify this and other issues pertaining to D theory parsers and to provide a framework within which these issues can be examined formally Thus we have a very narrow scope We make no arguments about the linguistic issues D theory parsers are meant to address their relation to other parsing formalisms or the notion of determinism in general Rather we focus on issues internal to D theory parsers themselves

Language Production and Interpretation: Linguistics meets Cognition Henk Zeevat, 2014-01-30 An utterance is normally produced by a speaker in linear time and the hearer normally correctly identifies the speaker intention in linear time and incrementally This is hard to understand in a standard competence grammar since languages are highly ambiguous and context free parsing is not linear Deterministic utterance generation from intention and a best Bayesian interpretation based on the production grammar and the prior probabilities that need to be assumed for other perception do much better The proposed model uses symbolic grammar and derives symbolic semantic representations but treats interpretation as just another form of perception Removing interpretation from grammar is not only empirically motivated but also makes linguistics a much more feasible enterprise The importance of Henk Zeevat's new monograph cannot be overstated Its combination of breadth formal rigor and originality is unparalleled in work on the form meaning interface in human language Zeevat's is the first proposal which provides a computationally feasible integrated treatment of production and comprehension for pragmatics semantics syntax and even phonology I recommend it to anyone who combines interests in language logic and computation with a sense of adventure David Beaver University of Texas at Austin
