Hauspie, Noël

Cameron, Luciano Molinari, 2004-06-24 In order to gain an understanding of the dynamics of human individual and average growth patterns it is essential that the right methods are selected There are a variety of methods available to analyse individual growth patterns to estimate variation in different growth measures in populations and to relate genetic and environmental factors to individual and average growth This volume provides an overview of modern techniques for the assessment and collection of growth data and methods of analysis for individual and population growth data The book contains the basic mathematical and statistical tools required to understand the concepts of the methods under discussion and worked examples of analyses but it is neither a mathematical treatise nor a recipe book for growth data analysis Aimed at junior and senior researchers involved in the analysis of human growth data this book will be an essential reference for anthropologists auxologists and paediatricians Metabolic Support of the Critically Ill Patient Douglas W. Wilmore, Yvon A. Gerontology and Geriatrics held in Erice Trapani Italy at the International Centre for Scientific Culture Ettore Majorana on March 20-25 1997. This international effort was organized jointly by professors from the University of Palermo Italy and from Wayne State University Michigan USA as a result of a cross-cultural collaboration of several years. The increasing average age of the populations in industrialized countries has resulted in increased interest in the different biological, medical, psychological, and economic aspects related to the health and social care of the elderly. Physicians and health care practitioners are realizing the need for a revised approach to geriatric care. Comprising contributions of clinicians and scientists from Italy and North America, the present volume provides a multidisciplinary approach to many gerontological and geriatric problems examined from a scientific and a practical point of view. Several of the most important aspects of the aging process: the genetics of aging, body composition, modification, immunological, endocrinological, and renal physiology changes have been addressed. Data from a multi-center Italian study on centenarians is reported together with an update on clinical and pharmacological approaches to dementia syndromes and economic and social aspects related to the care of the elderly.
