Hydrometallurgical Process Fundamentals Renato G. Bautista,2013-12-19 The mineral resources of the industrialized countries especially the member nations of the North Atlantic Treaty Organization are being depleted at such a rate that more and more of these countries are beginning to depend on ore imported from other countries To sustain the economic and strategic well being of these member countries it becomes imperative that a program of developing and exploiting other non conventional mineral resources and a conservation program where metal values from waste dumps and scrap metals and alloys are recycled must be initiated and implemented In order to meet this challenge new processes and technology must be available for consideration in the design and operation of the new plants One of the possible routes of extracting the metals from their ores especially for multimetal complex ores and very low grade ores is by hydrometallurgical processing The hydrometallurgical route of metal recovery where dissolution leaching separation and concentration ion exchange solvent extraction and membrane separation and reduction to metal cementation precipitation by gaseous reduction and electrolysis is carried out at near ambient temperature is becoming more competitive with the conventional high temperature processes used in the smelting of metals from high grade and beneficiated ores **Encyclopedia of Chemical Processing and Design** John J. McKetta Jr,1988-03-14 Written by engineers for engineers with over 150 International Editorial Advisory Board members this highly lauded resource provides up to the minute information on the chemical

processes methods practices products and standards in the chemical and related industries **Metal Recovery from Industrial Waste** Clyde S. Brooks, 2018-01-18 This book is offered as a practical primer on the hydrometallurgy of nonferrous metal reclamation from industrial wastes as well as a brief discussion of pyrometallurgy biological and other separation processes The objectives are to acquaint nontechnical readers with the subject as well as providing a detailed survey of current research and industrial practice to technical readers concerned with the management of industrial waste

Polymer Permeability J. Comyn, 2012-12-06 Polymers are permeable whilst ceramics glasses and metals are generally impermeable This may seem a disadvantage in that polymeric containers may allow loss or contamination of their contents and aggressive substances such as water will diffuse into polymeric structures such as adhesive joints or fibre reinforced composites and cause weakening However in some cases permeability is an advantage and one particular area where this is so is in the use of polymers in drug delivery systems Also without permeable polymers we would not enjoy the wide range of dyed fabrics used in clothing and furnishing The fundamental reason for the permeability of polymers is their relatively high level of molecular motion a factor which also leads to their high levels of creep in comparison with ceramics glasses and metals The aim of this volume is to examine some timely applied aspects of polymer permeability In the first chapter basic issues in the mathematics of diffusion are introduced and this is followed by two chapters where the fundamental aspects of diffusion in polymers are presented The following chapters then each examine some area of applied science where permeability is a key issue Each chapter is reasonably self contained and intended to be informative without frequent outside reference This inevitably leads to some repetition but it is hoped that this is not excessive

Advanced Process Control and Simulation for Chemical Engineers Hossein Ghanadzadeh Gilani, Katia Ghanadzadeh Samper, Reza Khodaparast Haghi, 2016-04-19 This book offers a modern view of process control in the context of today's technology It provides innovative chapters on the growth of educational scientific and industrial research among chemical engineers It presents experimental data on thermodynamics and provides a broad understanding of the main computational techniques used for chemical
