Recent Developments in the Chemistry of Natural Phenolic Compounds W. D. Ollis, 2013-10-22 Recent

Development in the Chemistry of Natural Phenolic Compounds covers the proceedings of the Third Plant Phenolics Group Symposium held in April 1960 This symposium brings together important and interesting developments in the chemistry of naturally occurring phenolic compounds This book is divided into 12 chapters that specifically concern with the biosynthesis and the determination of the structure of phenolic natural products The first three chapters discuss the various aspects of biosynthesis and the structural and biogenetic relationships among a large number of natural products These chapters also consider the biosynthesis of flavonoids with particular reference to the isoflavones The succeeding chapter highlights the variety of structures shown by phenolic compounds containing terpenoid substituents Another chapter deals with the recent syntheses of various natural products by methods involving oxidative coupling of phenolic precursors Other chapters are devoted to the relationship of phenolic precursors to natural biosynthetic routes The rest of the book deals with structural investigations which have led to the recognition of several classes of natural products This book is of great value to organic chemists and researchers

Recent Developments in the Chemistry of Natural Carbon Compounds , 1965 Recent Developments in the Chemistry of Natural Phenolic Compounds Plant Phenolics Group. Symposium, 1961 Fortschritte der Chemie Organischer Naturstoffe / Progress in the Chemistry of Organic Natural Products , 2012-12-06 The cyanogenic glycosides here defined as

glycosidic derivatives of α -hydroxynitriles represent a rather limited class of natural products which are widely distributed in the plant kingdom and to a small extent even in animals. A characteristic feature of these glycosides is their ability to release hydrocyanic acid on treatment with dilute acids or appropriate enzymes. The term cyanogenic is used to designate this property regardless of whether pure substances plants or animals are serving as the source. In the latter cases the term cyanophoric is occasionally employed synonymously. Cyanogenesis in plants was probably first discovered by SCHRADER in 1803 while working with bitter almonds. In 1830 ROBIQUET and BOUTRON CHARLARD also succeeded in isolating the parent glycoside namely amygdalin. Over the years a total of 18 cyanogenic glycosides have been isolated and characterized more or less completely. Table I p 76. It will be noted that the majority of these compounds has been isolated in the era of classical organic chemistry and that progress in discovering new compounds not to mention new structural types has been surprisingly slow. It is worth remembering here that the mechanism of cyanogenesis has been established only in the minority of known cyanogenic species. The cyanogenic glycosides have last been reviewed in 1958 by DILLE MANN 36. Since then no complete reviews in this field have appeared. It is the purpose of the present article to survey the more recent advances and hopefully to stimulate continued interest in these interesting compounds.

Remediation Engineering of Contaminated Soils Donald L. Wise, 2000-07-25. Offers thorough coverage of the remediation of soils contaminated by hazardous wastes including materials analytical techniques cleanup design and methodology characterization of geomedia monitoring of contaminants in the subsurface and waste containment. Fruit Phenolics Jean-Jacques Macheix, Annie Fleuriet, 1990-03-20. This fascinating work provides state of the art information on phenolic compounds in fruits. Written in a concise format it covers qualitative aspects by demonstrating the diversity of phenolic features in the major fruits of economic importance. It extensively covers the role played by phenolic compounds in the quality of fruits with regard to organoleptic characteristics and also as a parameter involved in enzymatic browning and other modifications which take place during fruit processing. This easy to read resource particularly emphasizes beverages made from fruits and the use of phenolic compounds in the detection of adulteration. This reference is indispensable to researchers in fundamental fields plant physiologists phytochemists biochemists as well as engineers and technologists working on practical applications in fruits.
