## **Recent Progress In Adsorption And Ion Exchange:**

**Recent Progress in Adsorption and Ion Exchange**, 1987      *Recent Progress in Desalination, Environmental and Marine Outfall Systems* Mahad Baawain, B.S. Choudri, Mushtaque Ahmed, Anton Purnama, 2015-08-31 This book collects current scientific information on advanced technologies and management practices associated with the desalination industry in the Middle East and elsewhere around the world. The book opens with an introductory chapter which briefly recounts the history of desalination and describes the current state of development in the field. Part I Desalination Systems includes ten chapters which describe a variety of techniques and designs intended not only to minimize the impact of desalination but also to save energy and use natural resources to maximize the output of integrated desalination systems. Among the highlights are a chapter on the use of ceramic membrane technology for sustainable oil water production, a case study on the use of solar heating systems in desalination technology in Oman, discussion of fouling and its effect on design and performance of desalination systems, a review of shore approaches and sea lines with case studies from Australia and Germany, and a discussion of the integration of desalination technology with renewable energy for climate change abatement in the Middle East and North Africa region. Part II Environmental Systems includes among others a chapter on regulating the use of water resources and desalination technology on a regional scale, reducing the carbon footprint of desalination with examples from Australia, a description of desalination for irrigation in the Souss Massa region in the south of Morocco, a study of the impact of the coastal intake environment on operating conditions of thermal desalination plants in the United Arab Emirates, a discussion of hydrodynamic and thermal dispersion modeling of the effluent in a coastal channel with a case study from Oman, and a mathematical model study of effluent disposal from a desalination plant in the marine environment at Tuticorin in India. The book aims to inspire developments in desalination technologies which are specifically aimed at reducing energy consumption and cost and minimizing environmental impact.

**Microbial Enhancement of Oil Recovery - Recent Advances** E.C. Donaldson, 1991-04-03 This conference was instituted to examine field activities in Microbial Enhancement of Oil Recovery The U S Department of Energy has sponsored several field projects and the details from some of these were presented as well as a few from industry The balance of the program was concerned with new developments in research Today s oil production technology leaves one third to one half of the original oil in place in the reservoir at abandonment of secondary recovery waterflooding This leaves a very large target for microbial enhanced oil recovery which was shown by the research papers of this conference to be capable of producing up to 50% of the residual oil The field trials show that the normal projected oil production decline curve can be reversed or leveled off by microbial enhancement of oil recovery This conference has shown that a variety of applications are possible to correct oilfield problems as well as to enhance oil recovery Among these is the suppression of hydrogen sulfide production which alone is a

tremendous advance because of the large quantity of sour oil production If hydrogen sulfide production can be curtailed it would increase the value of the produced oil decrease its toxicity and largely decrease its corrosiveness All of these would be welcome both in the field and at the petroleum refinery where special precautions must be taken to process sour crude oil Another very important discovery is the ability of certain bacteria to eliminate paraffin deposition around the producing well and in the tubulars This is a welcome improvement for many producers who have considerable difficulty in controlling paraffin deposition
