Emrich, Michael Wiegand, 2012-12-06 Professor Detlev Ploog On March 19 21 1989 a symposium entitled *Integrative Biological Psychiatry* was held at the Ringberg Castle Bavaria to honor the scientific work of Detlev Ploog who retired at that time from his position as the Director of the Max Planck Institute of Psychiatry in Munich The lectures represent an overview of the scientific work conducted at the Max Planck Institute within the recent past and thus also reflect the scientific intentions and research strategies of Detlev Ploog who brought together extremely divergent tendencies

within basic and clinical research and integrated the findings to elucidate new perspectives for fundamental psychiatric problems His ability to combine topics such as brain and behavior with neuropsychological neuroethological psychopharmacological and behavioral aspects generated a scientific climate in which psychiatric research flourished The chapters in the present volume represent a documentation of this integrative view on psychiatry and we who worked together with Detlev Ploog as his university colleagues at the Ludwig Maximilians University H H the Technical University of Munich H L and as his successor at the Max Planck Institute F H wish him also after his retirement continued scientific success with many additional contributions to modern psychiatry Hanns Hippus Florian Holsboer Hans Lauter Preface One of the main purposes of science is to elaborate models of natural processes that should be as realistic as possible

**Advances in Research on Neurodegeneration** R. Horowski,Y. Mizuno,C.W. Olanow,W. Poewe,P. Riederer,J.A. Stoessel,M.B.H. Youdim,2013-04-09 The 10th International Winter Conference on Neurodegeneration IWCN has taken place from February 14 16 2002 at the lovely SchloB Ziethen an old prussian manor in Prussia faute de mieux called SchloB i e castle or residence This place is 20 km off Tegel Airport Berlin s main airport and has been beautifully restored by baroness Edith von Thiingen nee von BUlow i e of historical Prussian aristocracy it lends itself rather perfectly for the IWCN type of small interdisciplinary workshops on neurodegenera tion which combine short lectures with plenty of discussion In this context we could quote Alexander von Humboldt s famous opening words for one of the first international scientific meetings held at Berlin on September 18 1828 The main purpose does not consist in a mutual reading of manuscripts all to be printed after at least one year in specialised publications but in the personal communication amongst those who work in similar scientific fields the oral and thus more stimulating exchange of ideas might they represent facts opinions or doubts the foundation of friendly relations which convey illumination to our sciences serene grace to our lives and tolerance and mildness to our habits Berlin Sept 18 1828 Alexander von Humboldt To the IWCN aficionado it may come as a little surprise that this is the publication of the 10th Winter Conference as this might mean that they must have missed number 9 New

Chadwick, Kate Widdows, 2008-04-30 Classical studies of steroid hormones are concerned with their regulation of protein synthesis via the modulation of genomic transcription But many of the actions of these hormones occur too rapidly to be explained in this manner particularly their effects on the central nervous system This text deals with recent discoveries showing that steroids can modulate the activity of some neurotransmitters It explores the role of GABA as an important regulator of neuronal activity in the central nervous system and its inhibitory action as mediated via the GABA receptor and potentiated by steroids In addition the binding of steroids to cell membranes the components involved and the outcome of such interactions are described Also discusses possible uses of steroids as anesthetics and anticonvulsants

70 **Mechanistic Relationships Between Development and Learning** Thomas J. Carew, R. Menzel, C. J.

Shatz,1998-06-29 At the turn of the century the pioneering neuroscientist Ramon y Cajal articulated the hypothesis that growth processes involved in the development of the central nervous system may persist into adulthood where they might be retained to mediate the formation and maintenance of memory Over the decades since Cajal s seminal suggestion extensive experimental attention has been directed at elucidating the cellular and molecular mechanisms underlying both neuronal development and learning and memory Many exciting technical and conceptual advances have been made on each front Thus as we approach the end of this century the field is now poised to assess the status of Cajal s provocative hypothesis directly This volume reflects a highly interdisciplinary dialog among experts in the fields of development and learning and memory who came together not only to assess the validity of the general hypotheses that development and learning might share mechanistic features but also to identify issues preparations and paradigms that would allow for a rigorous evaluation of ways to advance the hypothesis on the one hand and determine its fundamental limitations on the other Towards this end the volume is organized into four levels of analysis behavioral systems cellular and molecular At each level neuroscientists from the general fields of development and learning engage in lively exchange of ideas which serve to highlight the similarities and differences of both the concepts and the experimental approaches used in their diverse fields The result of this endeavor is a collection of seminal chapters and summary reports that provide a novel synthesis of important advances in two exciting areas of modern neuroscience Goal of this Dahlem Workshop to evaluate the validity of the general thesis that mechanisms utilized in the development of the nervous system are reutilized in the adult to mediate formation and maintenance of memory
