Cunningham, 2012-12-06 Foams are gas filled integral structures in which the gas is finely dispersed throughout a continuously connected solid phase The bulk density is usually substantially lower than that of the solid component and for the foams which form the focus for this book the volume fraction of the gas phase is considerably greater than 0.5 and in most instances in excess of 0.9 Many of the materials encountered in every day experience such as bread plants and trees structural materials for buildings comfort materials for domestic and automotive seating shock absorbers or car bumpers and materials for noise control have one thing in common the cellular nature of their physical structure Why are these structures so important in the natural and man made world The reasons are both technical and commercial From a technical viewpoint cellular materials offer 1 high specific stiffness and strength making them suitable for structural applications 2 close to ideal energy management hence their use in thermal and acoustic insulation vibration damping acoustic absorption and shock mitigation and 3 comfort hence their use for domestic and automotive seating Advances in Cryogenic Engineering K. D. Timmerhaus, 2013-11-11 The 1959 Cryogenic Engineering Conference Committee is pleased to present the papers of the 1959 Cryogenic Engineering Conference We are fortunate to have had the University of California at Berkeley Ca as our host for the fifth national meeting of this kind The move to the West Coast for this past Cryogenic Engineering Conference was prompted in part by the large concentration of missile activities which are to be found there Recognition of cryogenic operations and techniques in the missile field is given in many of the included papers The University of California was certainly well suited for such a meeting as this because it was here that much early work was done in cryogenics This pioneering in cryogenics is still evident today in the operation of the 72 inch bubble chamber at the Lawrence Radiation Laboratory The Cryogenic Engineering Conference salutes the missile industry and the cryogenic pioneers of yesterday and today at the University of California Special thanks must go to Dr D N Lyon from the Low Temperature Laboratory of the University of California who as chairman of the 1959 Cryogenic Engineering Conference Committee has worked tirelessly to increase the stature of this conference vii
