Generative and Transformational Techniques in Software Engineering Ralf Lämmel, João Saraiva, Joost Visser, 2006-09-29 This tutorial book presents an augmented selection of material presented at the International Summer School on Generative and Transformational Techniques in Software Engineering GTTSE 2005 The book comprises 7 tutorial lectures presented together with 8 technology presentations and 6 contributions to the participants workshop The tutorials combine foundations methods examples and tool support Subjects covered include feature oriented programming and the AHEAD tool suite program transformation with reflection and aspect oriented programming and more *ICDT'86* Giorgio Ausiello, Paolo Atzeni, 1986-12 **CONPAR 1986** Wolfgang Händler, Dieter Haupt, Rolf Jelitsch, Wilfried Juling, Otto Lange, 1986-09 Proceedings Parallel Computing **Accurate Scientific Computations** Willard L. Miranker, Richard A. Toupin, 1986-09 Mathematics of Computing Numerical Analysis *Machine Intelligence 15* Koichi Furukawa, Kōichi Furukawa, Donald Michie, Stephen Muggleton, 1999 Following on from previous volumes in the series Machine Intelligence 15 provides an overview of current areas of interest in artificial intelligence *Algebraic Algorithms and Error-Correcting Codes* Jaques Calmet, 1986-07 *Computer and Information Sciences II* Erol Gelenbe, Ricardo Lent, Georgia Sakellari, 2011-09-30 Information technology is the enabling foundation for all of human activity at the beginning of the 21st century and advances in this area are crucial to all of us These advances are taking place all over the world and can only be followed and perceived when researchers from all over the world assemble and exchange their ideas in conferences such as the one presented in this proceedings volume regarding the 26th International Symposium on Computer and Information Systems held at the Royal Society in London on 26th to 28th September 2011 Computer and Information Sciences II contains novel advances in the state of the art covering applied research in electrical and computer engineering and computer science across the broad area of information technology It provides access to the main innovative activities in research across the world and points to the results obtained recently by some of the most active teams in both Europe and Asia **Computing and Combinatorics** Lusheng Wang, 2005-09-07 The papers in this volume were presented at the Eleventh Annual International Computing and Combinatorics Conference COCOON 2005 held August 16 19 2005 in Kunming China

Algorithmic Learning Theory Shai Ben David, John Case, Akira Maruoka, 2004-09-24 Algorithmic learning theory is mathematics about computer programs which learn from experience This involves considerable interaction between various mathematical disciplines including theory of computation statistics and combinatorics There is also considerable interaction

with the practical empirical elds of machine and statistical learning in which a principal aim is to predict from past data about phenomena useful features of future data from the same phenomena The papers in this volume cover a broad range of topics of current research in the eld of algorithmic learning theory We have divided the 29 technical contributed papers in this volume into eight categories corresponding to eight sessions re ecting this broad range The categories featured are Inductive Inf ence Approximate Optimization Algorithms Online Sequence Prediction S tistical Analysis of Unlabeled Data PAC Learning Boosting Statistical pervised Learning LogicBased Learning and Query Reinforcement Learning Below we give a brief overview of the eld placing each of these topics in the general context of the eld Formal models of automated learning re ect various facets of the wide range of activities that can be viewed as learning A rst dichotomy is between viewing learning as an inde nite process and viewing it as a nite activity with a de ned termination Inductive Inference models focus on inde nite learning processes requiring only eventual success of the learner to converge to a satisfactory conclusion

Perspectives of Systems Informatics Edmund Clarke, Irina Virbitskaite, Andrei Voronkov, 2012-05-13 This book contains thoroughly refereed and revised papers from the 8th International Andrei Ershov Memorial Conference on Perspectives of System Informatics PSI 2011 held in Akademgorodok Novosibirsk Russia in June July 2011 The 18 revised full papers and 10 revised short papers presented were carefully reviewed and selected from 60 submissions The volume also contains 5 invited papers covering a range of hot topics in computer science and informatics The papers are organized in topical sections on foundations of program and system development and analysis partial evaluation mixed computation abstract interpretation compiler construction computer models and algorithms for bioinformatics programming methodology and software engineering information technologies knowledge based systems and knowledge engineering On the Ambiguity of Erasing Morphisms Johannes C. Schneider, 2012 This book discusses a very basic and fundamental phenomenon in combinatorics on words namely the ambiguity of morphisms A morphism h is called ambiguous for a word w provided that there is another morphism g which satisfies $g w h w$ If such another morphism does not exist h is called unambiguous for w Furthermore there are different types of restricted ambiguity which make additional demands on the other morphism g The examination of the ambiguity of morphisms is not only of intrinsic interest but due to the simplicity of the concept also shows various connections to other topics in theoretical computer science and discrete mathematics pattern languages and various other concepts as fixed points of morphisms avoidable patterns and word equations This book is the first comprehensive study of the ambiguity of erasing morphisms i e morphisms that are allowed to map symbols in the word to the empty word

Applied Algebra, Algorithmics and Error-Correcting Codes Alain Poli, 1986-07 *Acceleration of Biomedical Image Processing with Dataflow on FPGAs* Frederik Grüll, Udo Keschull, 2016-06-30 Short compute times are crucial for timely diagnostics in biomedical applications but lead to a high demand in computing for new and improved imaging techniques In this book reconfigurable computing with FPGAs is discussed as an alternative to multi core processing and graphics card

accelerators Instead of adjusting the application to the hardware FPGAs allow the hardware to also be adjusted to the problem Acceleration of Biomedical Image Processing with Dataflow on FPGAs covers the transformation of image processing algorithms towards a system of deep pipelines that can be executed with very high parallelism The transformation process is discussed from initial design decisions to working implementations Two example applications from stochastic localization microscopy and electron tomography illustrate the approach further Topics discussed in the book include Reconfigurable hardware Dataflow computing Image processing Application acceleration

Generative Programming and Component Engineering Frank Pfenning, Yannis Smaragdakis, 2003-11-19 This volume constitutes the proceedings of the second International Conference on Generative Programming and Component Engineering GPCE 2003 held September 22-25 2003 in Erfurt Germany sponsored by the NetObjectDays German industrial software development event in cooperation with the ACM SIGPLAN and SIGSOFT societies GPCE was created as an effort to bring together researchers working on both the programming languages and the software engineering side of program generation and component engineering The common theme of program generation and component engineering is the domain specific nature of both approaches Depending on the characteristics of a domain either a generative or a compositional technical solution may be appropriate In just its second year GPCE has shown a lot of promise for building a strong community The response to the call for papers was excellent with 62 submissions to the technical program 2 of which were later withdrawn Each paper received between three and five reviews many of them quite thorough and hopefully valuable to all authors The electronic meeting allowed for depth discussion of all submissions often to a much greater extent than possible in a physical PC meeting As a result 21 papers were selected for presentation at the conference and are included in this volume together with abstracts for the invited talks by Olivier Danvy and Peri Tarr Of the accepted papers 3 are co-authored by PC members from a total of 5 PC submissions We tried hard to ensure fairness and hold PC submissions to a high standard The EDAS conference submission system was used to manage the paper submissions Our EDAS installation was supported by Blair MacIntyre who was particularly helpful in resolving technical issues with the system

Logics of Programs Rohit Parikh, 1985-06 **Project Factorisations in Partial Evaluation** John

Launchbury, 1991-10-24 This thesis covers the theory and practice behind practical evaluation It explores how programmers write programs in a highly interpretive style without paying the price in efficiency
