Ring Close To Regular:

Rings Close to Regular A.A. Tuganbaev, 2013-03-09 Preface All rings are assumed to be associative and except for nilrings and some stipulated cases to have nonzero identity elements A ring A is said to be regular if for every element $a \in A$ there exists an element $b \in A$ with $aba = a$ Regular rings are well studied For example 163 and 350 are devoted to regular rings A ring A is said to be tr regular if for every element $a \in A$ there is an element $n \in A$ such that $anba = a$ for some positive integer n A ring A is said to be strongly tr regular if for every $a \in A$ there is a positive integer n with $n \geq 1$ $na^n \in A$ It is proved in 128 that A is a strongly tr regular ring if and only if for every element $a \in A$ there is a positive integer m with $m \geq 1$ $am \in A$ Every strongly tr regular ring is tr regular 38 If F is a division ring and M is a right vector F space with infinite basis e_i then $\text{End } M_F$ is a regular and tr regular ring that is not strongly tr regular The factor ring of the ring of integers with respect to the ideal generated by the integer 4 is a strongly tr regular ring that is not regular **Algebra and Coding**

Theory A. Leroy, S. K. Jain, 2023-05-01 This volume contains the proceedings of the Virtual Conference on Noncommutative Rings and their Applications VII in honor of Tariq Rizvi held from July 5-7 2021 and the Virtual Conference on Quadratic Forms Rings and Codes held on July 8 2021 both of which were hosted by the Universit  d Artois Lens France The articles cover topics in commutative and noncommutative algebra and applications to coding theory In some papers applications of Frobenius rings the skew group rings and iterated Ore extensions to coding theory are discussed Other papers discuss classical topics such as Utumi rings Baer rings nil and nilpotent algebras and Brauer groups Still other articles are devoted to various aspects of the elementwise study for rings and modules Lastly this volume includes papers dealing with questions in homological algebra and lattice theory The articles in this volume show the vivacity of the research of noncommutative rings and its influence on other subjects **Finite and Infinite Combinatorics in Sets and Logic** Norbert W Sauer, R.E.

Woodrow, B. Sands, 2012-12-06 This volume contains the accounts of papers delivered at the Nato Advanced Study Institute on Finite and Infinite Combinatorics in Sets and Logic held at the Banff Centre Alberta Canada from April 21 to May 4 1991 As the title suggests the meeting brought together workers interested in the interplay between finite and infinite combinatorics set theory graph theory and logic It used to be that infinite set theory finite combinatorics and logic could be viewed as quite separate and independent subjects But more and more those disciplines grow together and become interdependent of each other with ever more problems and results appearing which concern all of those disciplines I appreciate the financial support which was provided by the N A T O Advanced Study Institute programme the Natural Sciences and Engineering Research Council of Canada and the Department of Mathematics and Statistics of the University of Calgary 111 te meeting on Finite and Infinite Combinatorics in Sets and Logic followed two other meetings on discrete mathematics held in Banff the Symposium on Ordered Sets in 1981 and the Symposium on Graphs and Order in 1984 The growing inter relation between the different areas in discrete mathematics is maybe best illustrated by the fact that many of

the participants who were present at the previous meetings also attended this meeting on Finite and Infinite Combinatorics in Sets and Logic

Rings, Modules, and Closure Operations Jesse Elliott, 2019-11-30 This book presents a systematic exposition of the various applications of closure operations in commutative and noncommutative algebra In addition to further advancing multiplicative ideal theory the book opens doors to the various uses of closure operations in the study of rings and modules with emphasis on commutative rings and ideals Several examples counterexamples and exercises further enrich the discussion and lend additional flexibility to the way in which the book is used i e monograph or textbook for advanced topics courses

Smarandache Near-Rings W. B. Vasantha Kandasamy, 2002 Generally in any human field a Smarandache Structure on a set A means a weak structure W on A such that there exists a proper subset B in A which is embedded with a stronger structure S These types of structures occur in our everyday life that's why we study them in this book Thus as a particular case A Near Ring is a non empty set N together with two binary operations and such that N is a group not necessarily abelian N is a semigroup For all a, b, c in N we have $a(b c) = (a b) c$ A Near Field is a non empty set P together with two binary operations and such that P is a group not necessarily abelian $P \setminus \{0\}$ is a group For all $a, b, c \in P$ we have $a(b c) = (a b) c$ A Smarandache Near ring is a near ring N which has a proper subset P in N where P is a near field with respect to the same binary operations on N

Algebra II Ring Theory Carl Faith, 2012-12-06 ***Factorization in Integral Domains*** Daniel Anderson, 2017-11-13 The contents in this work are taken from both the University of Iowa's Conference on Factorization in Integral Domains and the 909th Meeting of the American Mathematical Society's Special Session in Commutative Ring Theory held in Iowa City The text gathers current work on factorization in integral domains and monoids and the theory of divisibility emphasizing possible different lengths of factorization into irreducible elements

Advances in Commutative Ring Theory David Dobbs, 2023-08-25 Presents the proceedings of the recently held Third International Conference on Commutative Ring Theory in Fez Morocco Details the latest developments in commutative algebra and related areas featuring 26 original research articles and six survey articles on fundamental topics of current interest Examines wide ranging developments in commutative algebra together with connections to algebraic number theory and algebraic geometry

Algebraic, Number Theoretic, and Topological Aspects of Ring Theory Jean-Luc Chabert, Marco Fontana, Sophie Frisch, Sarah Glaz, Keith Johnson, 2023-07-07 This volume has been curated from two sources presentations from the Conference on Rings and Polynomials Technische Universität Graz Graz Austria July 19-24 2021 and papers intended for presentation at the Fourth International Meeting on Integer valued Polynomials and Related Topics CIRM Luminy France which was cancelled due to the pandemic The collection ranges widely over the algebraic number theoretic and topological aspects of rings algebras and polynomials Two areas of particular note are topological methods in ring theory and integer valued polynomials The book is dedicated to the memory of Paul Jean Cahen a coauthor or research collaborator with some of the conference participants

and a friend to many of the others This collection contains a memorial article about Paul Jean Cahen written by his longtime research collaborator and coauthor Jean Luc Chabert

Ideal Theoretic Methods in Commutative Algebra Daniel Anderson, Ira J. Patrick, 2019-05-07 Includes current work of 38 renowned contributors that details the diversity of thought in the fields of commutative algebra and multiplicative ideal theory Summarizes recent findings on classes of going down domains and the going down property emphasizing new characterizations and applications as well as generalizations for commutative rings with

Commutative Algebra Marco Fontana, Sophie Frisch, Sarah Glaz, 2014-07-15 This volume presents a multi dimensional collection of articles highlighting recent developments in commutative algebra It also includes an extensive bibliography and lists a substantial number of open problems that point to future directions of research in the represented subfields The contributions cover areas in commutative algebra that have flourished in the last few decades and are not yet well represented in book form Highlighted topics and research methods include Noetherian and non Noetherian ring theory as well as integer valued polynomials and functions Specific topics include Homological dimensions of Prüfer like rings Quasi complete rings Total graphs of rings Properties of prime ideals over various rings Bases for integer valued polynomials Boolean subrings The portable property of domains Probabilistic topics in Integral Domains Closure operations in Zariski Riemann spaces of valuation domains Stability of domains Non Noetherian grade Homotopy in integer valued polynomials Localizations of global properties of rings Topics in integral closure Monoids and submonoids of domains The book includes twenty articles written by many of the most prominent researchers in the field Most contributions are authored by attendees of the conference in commutative algebra held at the Graz University of Technology in December 2012 There is also a small collection of invited articles authored by those who did not attend the conference Following the model of the Graz conference the volume contains a number of comprehensive survey articles along with related research articles featuring recent results that have not yet been published elsewhere

Topological Rings S. Warner, 1993-07-07 This text brings the reader to the frontiers of current research in topological rings The exercises illustrate many results and theorems while a comprehensive bibliography is also included The book is aimed at those readers acquainted with some very basic point set topology and algebra as normally presented in semester courses at the beginning graduate level or even at the advanced undergraduate level Familiarity with Hausdorff metric compact and locally compact spaces and basic properties of continuous functions also with groups rings fields vector spaces and modules and with Zorn's Lemma is also expected

Rings of Quotients B. Stenström, 2012-12-06 The theory of rings of quotients has its origin in the work of J. Ore and K. Asano on the construction of the total ring of fractions in the 1930's and 40's But the subject did not

really develop until the end of the 1950 s when a number of important papers appeared by R E Johnson Y Utumi A W Goldie P Gabriel J Lambek and others Since then the progress has been rapid and the subject has by now attained a stage of maturity where it is possible to make a systematic account of it which is the purpose of this book The most immediate example of a ring of quotients is the field of fractions Q of a commutative integral domain A It may be characterized by the two properties i For every $q \in Q$ there exists a non zero $s \in A$ such that $qs \in A$ ii Q is the maximal over ring of A satisfying condition i The well known construction of Q can be immediately extended to the case when A is an arbitrary commutative ring and S is a multiplicatively closed set of non zero divisors of A In that case one defines the ring of fractions $Q_A(S)$ as consisting of pairs (a, s) with $a \in A$ and $s \in S$ with the declaration that $(a, s) = (b, t)$ if there exists $u \in S$ such that $uta = usb$ The resulting ring Q satisfies i with the extra requirement that $s \in S$ and ii
