Rise Of American Research Universities Elites And Challengers In The Postwar Era:

The Rise of American Research Universities Hugh Davis Graham, Nancy Diamond, 1997-01-08 Before the Second World War few universities in the United States had earned high respect among the international community of scholars and scientists. Since 1945 however the distinctive attributes of American higher education—decentralized administration, pluralistic and research-minded faculties, and intense competition for government funding—have become world standard. Whether measured by Nobel and other prizes, international applications for student admissions and faculty appointments, or the results of academic surveys, America's top research universities are the best in the world. *The Rise of American Research Universities* provides a fresh historical interpretation of their ascendancy and a fresh comprehensive estimate of their scholarly achievement. Hugh Davis Graham and Nancy Diamond question traditional methods of rating the reputation and performance of universities; they offer instead an empirical analysis of faculty productivity based on research grants received, published research, and peer approval of that work. Comparing the research achievements of faculty at more than 200 institutions, they differ with most studies of higher education in measuring performance in every academic field from medicine to humanities, and in analyzing data on research activity in terms of institutional size. In this important and timely work, Graham and Diamond reassess the success of American universities as research institutions and the role of public funding in their development from the expansionist golden years of the 1950s and 60s through the austerity measures of the 1970s and the entrepreneurial ethos of the 1980s to the budget crises universities face in the 1990s. *The Rise of American Research Universities* Hugh Davis Graham, Nancy Diamond, 2004-09-27 In this important and timely work, Graham and Diamond reassess the success of American universities as research institutions and the role of public funding in their development from the expansionist golden years of the 1950s and 60s through the austerity measures of the 1970s and the entrepreneurial ethos of the 1980s to the budget crises universities face in the 1990s. [A People's History of American Higher Education](#) Philo A. Hutcheson, 2019-06-19 This pathbreaking textbook addresses key issues which have often been condemned to exceptions and footnotes if not ignored completely in historical considerations of U.S. higher education: particularly race, ethnicity, gender, and class. Organized thematically, this book builds from the ground up, shedding light on the full, diverse range of institutions including small liberal arts schools, junior and community colleges, black and white women's colleges, black colleges, and state colleges that have been instrumental in creating the higher education system we know today. *A People's History of American Higher Education* surveys the varied characteristics of the diverse populations constituting or striving for the middle class through educational attainment, providing a narrative that unites often divergent historical fields. The author engages readers in a powerful, revised understanding of what institutions and participants beyond the oft-cited elite groups have done for American higher education. *A People's History of American Higher Education* focuses on those participants who may not have been members of elite groups yet who helped push elite institutions and the country as a

whole Hutcheson introduces readers to both social and intellectual history providing invaluable perspectives and methodologies for graduate students and faculty members alike This essential history of American higher education brings a fresh perspective to the field challenging the accepted ways of thinking historically about colleges and universities

Dr. Nurse Dominique A. Tobbell, 2022-12-28 An analysis of the efforts of American nurses to establish nursing as an academic discipline and nurses as valued researchers in the decades after World War II Nurses represent the largest segment of the U S health care workforce and spend significantly more time with patients than any other member of the health care team Dr Nurse probes their history to examine major changes that have taken place in American health care in the second half of the twentieth century The book reveals how federal and state health and higher education policies shaped education within health professions after World War II Starting in the 1950s academic nurses sought to construct a science of nursing distinct from that of the related biomedical or behavioral sciences that would provide the basis for nursing practice Their efforts transformed nursing s labor into a valuable site of knowledge production and proved how the application of their knowledge was integral to improving patient outcomes Exploring the knowledge claims strategies and politics involved as academic nurses negotiated their roles and nursing s future Dr Nurse highlights how state supported health centers have profoundly shaped nursing education and health care delivery

Technocapitalism Luis Suarez-Villa, 2012-08-03 A new version of capitalism grounded in technology and science is spawning new forms of corporate power and organization that will have major implications for the twenty first century Technological creativity is thereby turned into a commodity in new corporate regimes that are primarily oriented toward research and intellectual appropriation This phenomenon is likely to have major social economic and political consequences as the new corporatism becomes ever more intrusive and rapacious through its control over technology and innovation In his provocative book Technocapitalism Luis Suarez Villa addresses this phenomenon from the perspective of radical political economy and social criticism Grounded in the premise that relations of power influence how human creativity and technology are exploited by the new corporatism the author argues that new forms of democratic participation and resistance are needed if the social pathologies created by this new version of capitalism are to be checked Considering the

new sectors affected by technocapitalism such as biotechnology nanotechnology bioinformatics and genomics Suarez Villa deciphers the common threads of power and organization that drive their corporatization These new sectors and the corporate apparatus set up to extract profit and power through them are imposing standards creating business models molding social governance and influencing social relations at all levels The new reality they create is likely to affect most every aspect of human existence including work health life and nature itself

Fischer,Josef Fröhlich,2013-11-27 In recent years there has been growing scientific interest in the triangular relationship between knowledge complexity and innovation systems The concept of innovation systems carries the idea that innovations do not originate as isolated discrete phenomena but are generated through the interaction of a number of actors or agents This set of actors and interactions possess certain specific characteristics that tend to remain over time Such characteristics are also shared by national regional sectoral and technological interaction systems They can all be represented as sets of institutional actors and interactions whose ultimate goal is the production and diffusion of knowledge The major theoretical and policy problem posed by these systems is that knowledge is generated not only by individuals and organisations but also by the often complex pattern of interaction between them To understand how organisations create new products new production techniques and new organisational forms is important An even more fundamental need is to understand how organisations create new knowledge if this knowledge creation lies in the mobilisation and conversion of tacit knowledge Although much has been written about the importance of knowledge in management little attention has been paid to how

knowledge is created and how the knowledge creation process is managed The third component of the research triangle concerns complexity

community colleges evolved Tuition and technology soared as did the number of first generation minority and women students These changes radically transformed the American system of postsecondary education Today that system is in trouble Its aging professoriate prepares for retirement but low academic salaries can no longer attract the best minds to replace them A flood of corporate dollars funds commercial research but money for basic research the seedbed of American scientific preeminence has dried up Colleges and universities also face heated competition with for profit education providers for students faculty and external financial support along with the costs of providing remedial education to growing numbers of students who are unprepared for postsecondary education Higher Education in the United States provides a comprehensive analysis of these issues and others that scholars and practitioners of higher education study discuss and grapple with on a daily basis
