Clague,Douglas Stead,2012-08-23 A comprehensive one stop synthesis of landslide science for researchers and graduate students in geomorphology engineering geology and geophysics      *Landslide Hazard and Risk* Thomas Glade,Malcolm G. Anderson,Michael J. Crozier,2006-01-04 With the increasing need to take an holistic view of landslide hazard and risk this book overviews the concept of risk research and addresses the sociological and psychological issues resulting from landslides Its integrated approach offers understanding and ability for concerned organisations landowners land managers insurance companies and researchers to develop risk management solutions Global case studies illustrate a variety of integrated approaches and a concluding section provides specifications and contexts for the next generation of process models      *Landslide Risk Assessment* David Cruden,2018-05-02 The 25 papers collected together in this volume present comprehensive coverage of all major aspects of landslide risk assessment including the risk assessment framework and methods for estimating probability of landsliding vulnerability and risk      *Mountain Risks: From Prediction to Management and Governance* Theo Van Asch,Jordi Corominas,Stefan Greiving,Jean-Philippe Malet,Simone Sterlacchini,2013-09-30 This book offers a cross disciplinary treatment of the rapidly growing field of integrated approaches in risk assessment in mountainous areas All major aspects related to hazard and risk assessment risk management and governance are illustrated with a wide range of case studies The first part of the book focuses on new techniques for assessing the natural hazards of different types of mass movements State of the art techniques for morphological characterization and monitoring of displacements are described Computational advances are covered to explain the process systems and to quantify the hazards of fast and slow moving landslides In the second part of the book methodologies are included for assessing the impact of these natural hazards on the society in terms of risks In this part methodologies for defining the vulnerability of the elements at risk are shown and the use of run out models for risk assessment of the dangerous rapid mass movements are evaluated The third part of the book focuses on the response of society towards the problems of hazard and risk It highlights the role of spatial planning early warning systems and evacuation plans for risk management It establishes practical thresholds for acceptable and tolerable risks and emphasizes the importance of education and communication to society Audience The book is of interest to a wide range of experts from related disciplines practitioners and stakeholders to demonstrate the importance of an integrated approach for all aspects of risks in mountainous areas      **Numerical Methods for Reliability and Safety Assessment** Seifedine Kadry,Abdelkhalak El Hami,2014-09-30 This book offers unique insight on structural safety and reliability by combining computational methods that address multiphysics problems involving multiple equations describing different physical phenomena and multiscale problems involving discrete sub problems that together describe important aspects of a system at multiple scales The book examines a range of engineering domains and problems using dynamic analysis nonlinear methods

Geomorphological Hazards and Disaster Prevention Irasema Alcántara-Ayala, Andrew S. Goudie, 2010-03-04 Human activities have had a huge impact on the environment and landscape through industrialisation and land use change leading to climate change deforestation desertification land degradation and air and water pollution These impacts are strongly linked to the occurrence of geomorphological hazards such as floods landslides snow avalanches soil erosion and others Geomorphological work includes not only the understanding but the mapping and modelling of Earth's surface processes many of which directly affect human societies In addition geomorphologists are becoming increasingly involved with the dimensions of societal problem solving through vulnerability analysis hazard and risk assessment and management The work of geomorphologists is therefore of prime importance for disaster prevention An international team of geomorphologists have contributed their expertise to this volume making this a scientifically rigorous work for a wide audience of geomorphologists and other Earth scientists including those involved in environmental science hazard and risk assessment management and policy

**Advances in Hydroinformatics** Philippe Gourbesville, Guy Caignaert, 2022-09-16 This book includes a collection of extended papers based on presentations given during the SIMHYDRO 2021 conference held in Sophia Antipolis in June 2021 with the support of French Hydrotechnic Society SHF It focused on Models for complex and global water issues Practices and expectations The water field is continuously mobilizing models for addressing complex issues and new challenges Within the context of the climate change the water issues are exacerbated with the competition among uses The limited water resources request from the modern societies to review some of the historical paradigms traditionally used and to promote new approaches for a sustainable management The combined complexity and vulnerability of large urban environments request a deep understanding of water uses and environmental synergy At the same time water related natural hazards are contentiously straightening modern societies that must adapt and implement a more resilient environment In parallel in the industrial sector the search for a high level of efficiency for hydraulic machinery requests to simulate complex processes Under all these situations the models currently used represent only partly the physical phenomena involved the scale of the processes the hypothesis included within the different numerical tools etc The design and the operation of relevant models represent a challenging task for the modeller who is responsible of the knowledge part of a global system that is dedicated to support the decision makers The book explores both the limitations and performance of current models and presents the latest developments based on new numerical schemes high performance computing multi physics and multi scales methods and better interaction with field or scale model data It addresses the interests of practitioners stakeholders

**2016GUIDELINES FOR INVESTIGATING GEOLOGIC HAZARDS AND PREPARING ENGINEERING-GEOLOGY REPORTS, WITH A SUGGESTED APPROACH TO GEOLOGIC-HAZARD ORDINANCES IN UTAH** Steve D. Bowman, William R. Lund, 2016-09-21 The purpose of these guidelines for investigating geologic hazards and preparing engineering geology reports is to provide recommendations for appropriate minimum investigative techniques standards and report content to ensure adequate geologic site characterization and geologic hazard investigations to protect public safety and facilitate risk reduction Such investigations provide important information on site geologic conditions that may affect or be affected by development as well as the type and severity of geologic hazards at a site and recommend solutions to mitigate the effects and the cost of the hazards both at the time of construction and over the life of the development The accompanying suggested approach to geologic hazard ordinances and school site investigation guidelines are intended as an aid for land use planning and regulation by local Utah jurisdictions and school districts respectively Geologic hazards that are not accounted for in project planning and design often result in

additional unforeseen construction and or future maintenance costs and possible injury or death      **Monitoring, Early Warning and Mitigation of Natural and Engineered Slopes, volume III** Wen Nie,Haijun Qiu,Afshin Asadi,2024-08-20

Natural and engineered slopes are widely distributed worldwide including mountain slopes highway slopes mine slopes reservoir dams etc These slopes could become unstable due to natural factors or human activities causing catastrophic loss of life and infrastructure destruction Therefore these slopes require constant monitoring to provide early warning and enable mitigation Advanced monitoring equipment information technology and multidisciplinary interaction theories have created new opportunities and challenges in this discipline Recently advanced monitoring devices information technologies and multidisciplinary intersection theories have contributed to the monitoring early warning and mitigation of natural and engineered slopes However effective and efficient monitoring precise early warning low cost and low time consuming remediation and reliable risk assessment remain obstacles This Research Topic aims to present the most recent innovative advancements and state of the art natural and engineered slope monitoring early warning mitigation and risk assessment
