Risk Analysis And Uncertainty In Flood Damage Reduction Studies:

Risk Analysis and Uncertainty in Flood Damage Reduction Studies National Research Council, Commission on Geosciences, Environment, and Resources, Water Science and Technology Board, Committee on Risk-Based Analysis for Flood Damage Reduction, 2000-10-20 Reducing flood damage is a complex task that requires multidisciplinary understanding of the earth sciences and civil engineering In addressing this task the U S Army Corps of Engineers employs its expertise in hydrology hydraulics and geotechnical and structural engineering Dams levees and other river training works must be sized to local conditions geotechnical theories and applications help ensure that structures will safely withstand potential hydraulic and seismic forces and economic considerations must be balanced to ensure that reductions in flood damages are proportionate with project costs and associated impacts on social economic and environmental values A new National Research Council report Risk Analysis and Uncertainty in Flood Damage Reduction Studies reviews the Corps of Engineers risk based techniques in its flood damage reduction studies and makes recommendations for improving these techniques Areas in which the Corps has made good progress are noted and several steps that could improve the Corps risk based techniques in engineering and economics applications for flood damage reduction are identified The report also includes recommendations for improving the federal levee certification program for broadening the scope of flood damage reduction planning and for improving communication of risk based concepts *Workshop on Risk-based Analysis for Flood Damage Reduction Studies, 18-21 October 1994, Omaha, Nebraska, 1994* *Upper Des Plaines River Flood Damage Reduction Study, 1999*

Water Resources Engineering Larry W. Mays, 2010-06-08 Environmental engineers continue to rely on the leading resource in the field on the principles and practice of water resources engineering The second edition now provides them with the most up to date information along with a remarkable range and depth of coverage Two new chapters have been added that explore water resources sustainability and water resources management for sustainability New and updated graphics have also been integrated throughout the chapters to reinforce important concepts Additional end of chapter questions have been added as well to build understanding Environmental engineers will refer to this text throughout their careers *Flood Risk Management in Europe* Selina Begum, Marcel J.F. Stive, Jim W. Hall, 2007-06-17 In recent years major floods have occurred across Europe causing serious damages and huge financial implications Flood risk and vulnerability is increasing with increased frequency of occurrence of extreme events due to climate change changes in land use encroachment into floodplains and increasing economic value of assets and businesses Human lives property environment and socio economics are at increasing risk due to flooding Recent alarming events in Central Europe UK and The Netherlands have provided renewed impetus to the development of improved policies and techniques for flood risk management across Europe Sharing of knowledge and understanding of the practical problems dilemmas and challenges will aid in the development and implementation of new technologies and strategies of the challenging issues of flood risk

management in Europe This valuable edition brings together 26 peer reviewed articles on technical socio economic environmental and policy aspects of flood risk management These articles contribute to the five sections with the general themes i flood risk management practice ii flood events and impacts iii flood analysis and modelling iv flood forecasting and v flood risk management policy Some emerging technologies are presented and several future challenges are identified Thus the book Flood Risk Management in Europe Innovation in Policy and Practice with a multi disciplinary combination of articles will form an excellent reference for the engineers scientists planners policy makers researchers insurance industry and all the practitioners involved in flood risk management and its sub disciplines in engineering hydrology environmental studies coastal management economics and public policy

Job,2022-05-29 Groundwater is a vitally important resource and as its use increases the available supply is depleted creating a ripple effect of impacts on both the environment and the economy that need to be disseminated to a larger audience of students and practitioners This second edition of Groundwater Economics accomplishes just that This two volume set is a comprehensive work focused on the economic values of groundwater resources and use and it reinforces the need for a strong economic rationale in decision making relating to that use This new edition includes a new chapter on sustainability as well as updating all chapters with a focus on sustainability It thoroughly explains the economic value of groundwater for sustainable use and needs with practical examples and includes thirteen new and updated case studies on the economics of groundwater data for decision making It also addresses both local and regional groundwater economic choices through a series of applications at an international level This set written by a sustainability professional with decades of experience in managing groundwater use and protection is written for other professionals as well as students who need to understand and evaluate water resources and manage their use from a variety of sustainable approaches Town of Bloomsburg, Columbia

County, Flood Damage Reduction Project, Integrated Feasibility Report ,2005 **Floods of the Tiber in Ancient Rome**
Gregory S. Aldrete,2007-03-05 A study of the impact of flooding on the ancient city during the classical period While the remains of its massive aqueducts serve as tangible reminders of Rome s efforts to control its supply of drinking water there are scant physical reminders that other waters sometimes raged out of control In fact floods were simply a part of life in ancient Rome where proximity to the Tiber left a substantial part of the city vulnerable to the river s occasional transgressions Here in the first book length treatment of the impact of floods on an ancient city Gregory S Aldrete draws upon a diverse range of scientific and cultural data to develop a rich and detailed account of flooding in Rome throughout the classical period Aldrete explores in detail the overflowing river s destructive effects drawing from ancient and modern written records and literary accounts analyses of the topography and hydrology of the Tiber drainage basin visible evidence

on surviving structures and the known engineering methods devised to limit the reach of rising water He discusses the strategies the Romans employed to alleviate or prevent flooding their social and religious attitudes toward floods and how the threat of inundation influenced the development of the city's physical and economic landscapes Floods of the Tiber in Ancient Rome is that rare thing in scholarship a work that genuinely fills a gap in the scholarly literature Professor Aldrete has brilliantly illuminated an aspect of ancient Rome that was ever present to the city's inhabitants but almost invisible to modern historians Stanley Burstein history teacher Raises important questions about the effects of flooding of the Tiber on the city of ancient Rome and its inhabitants and explores why Romans did not take more sweeping steps to reduce if not eliminate the dangers of urban flooding There is no comparable book length study of this topic so this work fills a real need It will be of interest not only to students of ancient history but to hydrologists and students of urban studies as well Certainly it will give us classicists much to think about in our assessment of urban life in ancient Rome Harry B Evans Fordham

Sakurai, Rajib Shaw, 2021-05-06 Technological advances have helped to enhance disaster resilience through better risk reduction response mitigation rehabilitation and reconstruction In former times it was local and traditional knowledge that was mainly relied upon for disaster risk reduction Much of this local knowledge is still valid in today's world even though possibly in different forms and contexts and local knowledge remains a shared part of life within the communities In contrast with the advent of science and technology scientists and engineers have become owners of advanced technologies which have contributed significantly to reducing disaster risks across the globe This book analyses emerging technologies and their effects in enhancing disaster resilience It also evaluates the gaps challenges capacities required and the way forward for future disaster management A wide variety of technologies are addressed focusing specifically on new technologies such as cyber physical systems geotechnology drone and virtual reality VR augmented reality AR Other sets of emerging advanced technologies including an early warning system and a decision support system are also reported on Moreover the book provides a variety of discussions regarding information management communication and community resilience at the time of a disaster This book's coverage of different aspects of new technologies makes it a valuable resource for students researchers academics policymakers and development practitioners Hydrologic Engineering in Planning, 1994
