Thinking Psychologically About Children Who Are Looked After and Adopted Kim S. Golding, Helen R. Dent, Ruth Nissim, Liz Stott, 2006-02-22

Assessment intervention and living with children who are looked after or adopted all require an understanding of psychology and its application. This innovative collection makes thinking psychologically about looked after and adopted children accessible and in doing so provides an insight into the world of these children. Informed by research practice and psychological theory, this volume provides an overview of the area and considers the context for helping children change and develop. It goes on to describe in detail the techniques and approaches used by clinicians and explains how interventions can be developed and adapted for children and young people living in residential foster and adoptive care. Careful consideration is also given to carers and families living with these children. With its multi-disciplinary approach, *Thinking Psychologically About Children Who Are Looked After and Adopted* will appeal to all professionals involved in the care and education of placed children. It will also be of interest to policy makers and lecturers and students of social work.

*Growth and Risk in Infancy* Stephen Briggs, 1997

This book is based on detailed weekly observations of infants in their home environment from shortly after birth until two years. Each infant's interactions, relationships, physical, emotional and cognitive development are systematically studied. The focus of the study is on vulnerable infants and problems in their development encountered in the course of observations are carefully assessed in terms of risk and resilience. The aims of the book are to explore first how far these observations can contribute to the development of a new methodology for studying infancy, second how this approach leads to the emergence of new theoretical concepts and third how this study can influence professionals in the field. The book demonstrates that these observations can combine theoretical perspectives from psychoanalysis and child development psychology and can extend both kinds of theory. Comparisons between the infants leads to the development of a theoretical model and this is demonstrated throughout the five case studies. The findings from the study concentrate on continuity and change in infant development and how the model facilitated conceptualisations and comparisons of infant development. The

book ends with considered conclusions about risk in infancy and the scope for further research The book will be essential for all engaged in the study of infancy and for professionals working with infants young children and their families Infant Mortality, Oversight United States.
