Corporate Risk and National Security Redefined Karen Lund Petersen,2012-02-06 Contemporary security policy is no longer a matter of protecting borders or fighting an identified foreign enemy With counterterrorism high on the security agenda private citizens and

companies have all come to be seen as central to the aim of providing security. Situated within the debate on terrorism risk and security, *Corporate Risk and National Security Redefined* offers a detailed analysis of the role of private companies in American and Danish counter terrorism policies. The book shows that a responsabilization strategy is central to both the American and Danish security policy, a strategy which tends to portray security as a duty rather than the right that it traditionally has been considered as. The study however finds that such strategies have been received very differently in the business communities of the two countries. The book brings the corporate understandings of the relation between corporate risk and national security to the fore and let the reader in on a constant conceptual battle and negotiation on the meaning of national security and corporate risk. *Corporate Risk and National Security Redefined* will be of interest to students and scholars of international relations, critical security, business and terrorism.

Insurability of Emerging Risks Baris Soyer, Özlem Gürses, 2025-01-23. This book brings together leading experts in the fields of insurance and the law of obligations to consider how insurance law is attempting to deal with emerging risks. Emerging risks pose significant challenges for the insurance industry. Apart from difficulties in quantifying such risks, the availability of insurance capacity is often a concern. The book looks at these issues from philosophical, economic and actuarial perspectives. It asks how far existing private law rules can cope with emerging risks and in so far as they cannot, how the law should be developed by courts and lawmakers to deal with the emerging legal issues. The book questions the suitability of the current insurance business models in insuring climate related risks, autonomous systems, insurance of fines and penalties as well as how mass or systemic risks, eg pandemics or cyber risks, can be made insurable through add on coverages to the conventional insurance policies. It also evaluates governments' roles to encourage insurers to provide cover for such risks and discusses how a balance can be struck between the need to regulate and the insurance markets' dynamics. The book will be of academic interest to anyone working in the field of insurance and also relevant for market participants, policy makers and regulators.
