Optimal Automated Process Fault Analysis Richard J. Fickelscherer, Daniel L. Chester, 2012-11-27 Tested and proven strategy to develop optimal automated process fault analyzers Process fault analyzers monitor process operations in order to identify the underlying causes of operational problems Several diagnostic strategies exist for automating process fault analysis however automated fault analysis is still not widely used within the processing industries due to problems of cost and performance as well as the difficulty of modeling process behavior at needed levels of detail In response this book presents the method of minimal evidence MOME a model based diagnostic strategy that facilitates the development and implementation of optimal automated process fault analyzers MOME was created at the University of Delaware by the researchers who developed the FALCON system a real time online process fault analyzer The authors demonstrate how MOME is used to diagnose single and multiple fault situations determine the strategic placement of process sensors and distribute fault analyzers within large processing systems Optimal Automated Process Fault Analysis begins by exploring the need to automate process fault analysis Next the book examines Logic of model based reasoning as used in MOME MOME logic for performing single and

multiple fault diagnoses Fuzzy logic algorithms for automating MOME Distributing process fault analyzers throughout large processing systems Virtual SPC analysis and its use in FALCONEERTM IV Process state transition logic and its use in FALCONEERTM IV The book concludes with a summary of the lessons learned by employing FALCONEERTM IV in actual process applications including the benefits of intelligent supervision of process operations With this book as their guide readers have a powerful new tool for ensuring the safety and reliability of any chemical processing system *Process Plants* Trevor A. [Security and Environmental Sustainability of Multimodal Transport](#) Michael Bell, Solmaz Haji Hosseinloo, Urszula Kanturska, 2010-06-07 Not until the recent attacks on transport systems has transport security become a focus of public concern and academic research Various aspects of transport security have already been analysed under different agendas Some research was focused on the potential risk to the environment resulting from transport in particular from the transport of hazardous or dangerous goods while other research considered critical elements of transport networks or supply chains as vital lifelines in the case of natural disasters Recently new threats stimulated interest in transport security as a stand alone issue placing it at the forefront of political and academic agendas A NATO Advanced Research Workshop held at Imperial College London in January 2009 brought together those with expertise in the above mentioned fields in order to verify the current state of knowledge in the field and identify promising areas for future work The workshop concentrated on maritime and intermodal transport risk management and long term strategic planning

rather than on the details of monitoring or detection techniques This collection of papers emanates largely from that workshop While transport systems are widely recognized as terrorist targets complete protection of these systems is economically and practically infeasible The workshop looked at analytical methods to identify critical points in the transport infrastructure and the prioritization of defensive and mitigating measures given the limited resources available Deficiencies in methods for conducting such an assessment were identified and the need for cost effective mitigation measures was emphasized Proceedings of the 22nd International Conference on Industrial Engineering and Engineering Management 2015 Ershi Qi,Jiang Shen,Runliang Dou,2016-01-29 Being the premier forum for the presentation of new advances and research results in the fields of Industrial Engineering IEEM 2015 aims to provide a high level international forum for experts scholars and entrepreneurs at home and abroad to present the recent advances new techniques and applications face and face to promote discussion and interaction among academics researchers and professionals to promote the developments and applications of the related theories and technologies in universities and enterprises and to establish business or research relations to find global partners for future collaboration in the field of Industrial Engineering All the goals of the international conference are to fulfill the mission of the series conference which is to review exchange summarize and promote the latest achievements in the field of industrial engineering and engineering management over the past year and to propose prospects and vision for the further development This volume is the first of the two proceedings volumes from this conference
