Natural Laws In Scientific Practice:

Natural Laws in Scientific Practice Marc Lange, 2000-06-08 Philosopher of science Marc Lange aims to develop a new account of the roles that laws of nature play in scientific reasoning such as counterfactual conditionals inductive projections and scientific explanations and what those roles imply about the very nature of natural laws **Natural Laws in Scientific Practice** Marc Lange, 2000-06-08 It is often presumed that the laws of nature have special significance for scientific reasoning But the laws distinctive roles have proven notoriously difficult to identify leading some philosophers to question if they hold such roles at all This study offers original accounts of the roles that natural laws play in connection with counterfactual conditionals inductive projections and scientific explanations and of what the laws must be in order for them to be capable of playing these roles Particular attention is given to laws of special sciences levels of scientific explanation natural kinds ceteris paribus clauses and physically necessary non laws **The Decline of Natural Law** Stuart Banner, 2021 The law of nature The common law The adoption of written constitutions The separation of law and religion The explosion in law publishing The two sidedness of natural law The decline of natural law and custom Substitutes for natural law Echoes of natural law Laws in Nature Stephen Mumford, 2004-08-02 This book outlines a major new theory of natural laws and addresses questions currently being debated by metaphysicians How Scientific Practices Matter Joseph Rouse, 2002 How can we understand the world as a whole instead of separate natural and human realms Joseph T Rouse proposes an approach to this classic problem based on radical new conceptions of both philosophical naturalism and scientific practice Rouse begins with a detailed critique of modern thought on naturalism from Neurath and Heidegger to Charles Taylor Thomas Kuhn and W V O Quine He identifies two constraints central to a philosophically robust naturalism it must impose no arbitrarily philosophical restrictions on science and it must shun even the most subtle appeals to mysterious or supernatural forces Thus a naturalistic approach requires philosophers to show that their preferred conception of nature is what scientific inquiry discloses and that their conception of scientific understanding is itself intelligible as part of the natural world Finally Rouse draws on feminist science studies and other recent work on causality and discourse to demonstrate the crucial role that closer attention to scientific practice can play in reclaiming naturalism A bold and ambitious book How Scientific Practices Matter seeks to provide a viable yet nontraditional defense of a naturalistic conception of philosophy and science Its daring proposals will spark much discussion and debate among philosophers historians and sociologists of science *Natural Kinds and Classification in Scientific Practice* Catherine Kendig, 2015-12-22 This edited volume of 13 new essays aims to turn past discussions of natural kinds on their head Instead of presenting a metaphysical view of kinds based largely on an unempirical vantage point it pursues questions of kindness which take the use of kinds and activities of kinding in practice as significant in the articulation of them as kinds The book brings philosophical study of current and historical episodes and case studies from various scientific disciplines to bear on natural

kinds as traditionally conceived of within metaphysics Focusing on these practices reveals the different knowledge producing activities of kinding and processes involved in natural kind use generation and discovery Specialists in their field the esteemed group of contributors use diverse empirically responsive approaches to explore the nature of kindhood This groundbreaking volume presents detailed case studies that exemplify kinding in use Newly written for this volume each chapter engages with the activities of kinding across a variety of disciplines Chapter topics include the nature of kinds kindhood kinding and kind making in linguistics chemical classification neuroscience gene and protein classification colour theory in applied mathematics homology in comparative biology sex and gender identity theory memory research race extended cognition symbolic algebra cartography and geographic information science The volume seeks to open up an as yet unexplored area within the emerging field of philosophy of science in practice and constitutes a valuable addition to the disciplines of philosophy and history of science technology engineering and mathematics

Kant and the Systematicity of the Sciences Gabriele Gava, Thomas Sturm, Achim Vesper, 2025-04-29 This book provides the first comprehensive discussion regarding the role that Kant ascribes to systematicity in the sciences It considers not only what Kant has to say on systematicity in general but also how the systematicity requirement for science is specified in different fields of knowledge The chapters are divided into three thematic sections Part I is devoted to historical context The chapters explore precursors of Kant's account of the systematicity of the sciences Part II addresses the application of systematicity to the special sciences cosmology physics chemistry logic mathematics the life sciences and history Finally Part III explores the systematicity of philosophy Kant and the Systematicity of the Sciences will be of interest to scholars and advanced students working on Kant and the history and philosophy of science

Mapping Scientific Method Gita Chadha, Renny Thomas, 2022-07-19 This volume explores how the scientific method enters and determines the dominant methodologies of various modern academic disciplines It highlights the ways in which practitioners from different disciplinary backgrounds the humanities the natural sciences and the social sciences engage with the scientific method in their own disciplines The book maps the discourse within each of the disciplines that critiques the scientific method from different social locations in order to argue for more complex and nuanced approaches in methodology It also investigates the connections between the method and the structures of power and domination which exist within these disciplines In the process it offers a new way of thinking about the philosophy of the scientific method Part of the Science and Technology Studies series this volume is the first of its kind in the South Asian context to debate scientific methods and address questions by scholars based in the global south It will be useful to students and practitioners of science humanities social sciences philosophy of science and philosophy of social science Research scholars from these disciplines especially those engaging in interdisciplinary research will also benefit from this volume

Returning to Scientific Practice Xu Zhu, Wu Tong, 2019-05-17 This book is a result from a collective study on philosophy of scientific practice PSP which began around 2002 and still ongoing There is an apparently increasing interest in

scientific practice influenced by the historicistic philosophy of science and the sociology of scientific knowledge SSK Prof WU Tong and his research group believe that it is necessary for PSP to turn from the theory dominant position to the practice dominance PSP has also put forward the possibility of reinterpreting the epistemic status of local knowledge in Chinese tradition which provides the most significant motivation to participate this study In this book we have selected three main cases namely Chinese medicine Fengshui and Ethnobotany to examine the effect of PSP The aim of our collective study is not merely on theoretical construction of PSP but also to consider the various applications of PSP especially for re interpreting and demonstrating the variety of local knowledge from traditional China which seems to be a genuine contribution to the international enterprise of philosophy of science particularly made by Chinese scholars

Bodily Natures Stacy Alaimo, 2010-10-25 How do we understand the agency and significance of material forces and their interface with human bodies What does it mean to be human in these times with bodies that are inextricably interconnected with our physical world Bodily Natures considers these questions by grappling with powerful and pervasive material forces and their increasingly harmful effects on the human body Drawing on feminist theory environmental studies and the sciences Stacy Alaimo focuses on trans corporeality or movement across bodies and nature which has profoundly altered our sense of self By looking at a broad range of creative and philosophical writings Alaimo illuminates how science politics and culture collide while considering the closeness of the human body to the environment
