Natural Regulations Of Animal Numbers:

The Natural Regulation of Animal Numbers David Lack, 1967 **Natural Regulation of Animal Populations** McLaren, *The Natural Regulation of Animal Numbers* David Lambert Lack, 1974 Natural Regulation of Animal Populations Ian A. McLaren, 2017-07-05 Surveying an area dense with conflicting observations and ideas this volume vividly depicts the current state of knowledge as well as the great diversity of opinion in the field of population ecology Ten papers by outstanding authorities focus on three main issues the effects of environment and population density on population dynamics the influence of animal behavior on population growth and the possibilities of genetic feedback or short term evolutionary change on control of animal populations An incisive introduction by the editor establishes a frame of reference and supplies succinct resolutions of some of the important controversies dealt with in these pages **The Natural Regulation of Animal Numbers** Gordon Greenwood, 1954 **The Life of David Lack** Ted Anderson, 2013-07-18 The first biography of David Lack the father of evolutionary ecology and an acclaimed ornithologist , **Population Dynamics** Bertram G. Jr. Murray, 2013-07-22 Population Dynamics Alternative Models provides a theoretical framework of population dynamics This book contains seven chapters that discuss the controversies surrounding discussions on the explicit view of the subject Chapters 1 and 2 present a general introduction to the terminology the mathematical background and the philosophical approach that lie behind the theoretical development Chapter 3 contains a series of models accounting for variations in population growth rates sizes and fluctuations while Chapter 4 examines a model accounting for the evolution of life history patterns A more detailed examination of the effects of predation on prey populations especially with respect to determining a prey population s maximum sustainable yield is explored in Chapter 5 Chapter 6 highlights the interspecific competition theory in terms of the population dynamics models presented in a previous chapter Chapter 7 summarizes the developments in the population dynamics research studies This work will be of great value to ecologists biologists and population dynamics researchers *A Place like No Other* Anthony R. E. Sinclair, 2021-10-19 From famed zoologist Anthony Sinclair an account of his decades long quest to understand one of Earth s most spectacular ecosystems With its rich biodiversity astounding wildlife and breathtaking animal migrations Serengeti is like no other ecosystem on the planet A Place like No Other is Anthony Sinclair s firsthand account of how he and other scientists discovered the biological principles that regulate life in Serengeti and how they rule all of the natural world When Sinclair first began studying this spectacular ecosystem in 1965 a host of questions confronted him What environmental features make its annual migration possible What determines the size of animal populations and the stunning diversity of species What factors enable Serengeti to endure over time In the five decades that followed Sinclair and others sought answers What they learned is that seven principles of regulation govern all natural processes in the Serengeti ecosystem Sinclair shows how these principles can help us to understand and overcome the challenges facing Serengeti today and how they can be used to repair damaged habitats

throughout the world Blending vivid storytelling with invaluable scientific insights from Sinclair's pioneering fieldwork in Africa *A Place like No Other* reveals how Serengeti holds timely lessons for the restoration and conservation of our vital ecosystems

The Moon in the Nautilus Shell Daniel B. Botkin, 2012-09-14 Why do we keep talking about so many environmental problems and rarely solve any? If these are scientific issues then why can't scientists solve them or at least agree on what to do? In his new book *The Moon in the Nautilus Shell* ecologist Daniel Botkin explains why. For one thing, although we live in a world of constantly changing environments and talk a lot about climate change, most of our environmental laws, policies, and scientific premises are based on the idea that the environment is constant, never changing except when people affect it. For another, we have lost contact with nature in personal ways. Disconnected from our surroundings, we lack the deep understanding and feelings about the environment to make meaningful judgments. The environment has become just another one of those special interests that interferes with our lives. Poised to be a core text of the twenty-first century environmental movement, *The Moon in the Nautilus Shell* challenges us to think critically about our role in nature.
