Natural Killer Cell:

Natural Killer Cells Michael T. Lotze, Angus W. Thomson, 2009-11-12 *Natural Killer Cells* explains the importance of killer cells and how they are produced. It mentions that the most likely explanation for killer cell production is that they serve as a complementary system for T cells as a primary defense against viruses. However, these cells defend against certain viruses only, such as herpes viruses and influenza viruses. The book also explains the primary functions of killer cells and discusses how these cells help recognize damaged tissues, limit further damage to tissues, and regenerate damaged tissues. It discusses how these cells mature and develop and covers the different isolation culture and propagation methods of these cells. Furthermore, it focuses on the different killer cells that are present in various parts of the human body. The book concludes by explaining that natural killer cells are utilized for clinical therapy of malignancies and that they have led to positive outcomes in the field of biology and medicine. Provides a broad, detailed coverage of the biology and interactions of NK cells for students, fellows, scientists, and practitioners. Includes figures, histologic sections, and illustrations of the ontogeny of NK cells. *The Natural Killer Cell* Claire E. Lewis, 1992. The ability of an organism to combat infection by foreign particles and microbial pathogens is essential for its survival and evolutionary success. Such efforts at immunity can take two forms. A considerable number of works have been published which focus on the central role of antigen recognition and antibody structure and function in the host response to infection. This volume, however, discusses the recent shift in focus towards the natural or innate immune system, which consists of various cell types and factors. These cells and factors can take part in immune responses without prior sensitization and have important modulatory effects on later specific responses. This work reviews the biology and function of the natural killer cell, covering such topics as the molecular basis of natural killer cell function and its role in viral infection, tumor biology, and transplantation. Graduate students and researchers in immunology, cell biology, and medicine will find this work a valuable resource on current research in this exciting field.

Natural Killer Cells Eric Vivier, James Di Santo, Alessandro Moretta, 2016-02-15. To celebrate the 40th anniversary of the discovery of Natural Killer (NK) cells, this volume focuses on the recent advances in our understanding of NK cell development and differentiation and their acquisition of functional properties, as well as the latest models for NK cell analysis in mice and applications in clinical medicine. NK cells have travelled a circuitous path from their initial description as spontaneous killers for some, simply an experimental artifact, to being a bona fide subset of innate lymphoid cells with a complementary mode of action in immune defense and an important mediator of immune reactivity in health and disease. Together, these reviews provide a timely and concise picture of the evolution of NK cells as essential agents in immunity and as potent weapons against disease. This book offers an appealing and insightful resource for scientists and clinicians. [Natural Killer Cells in Tissue Compartments](#) Massimo Vitale, Simona Sivori, Michael A. Immunobiology of Natural Killer Cell Receptors Eric

Vivier, Marco Colonna, 2005-12-20 Natural Killer NK cells are large granular lymphocytes of the innate immune system They are widespread throughout the body being present in both lymphoid organs and non lymphoid peripheral tissues NK cells are involved in direct innate immune reactions against viruses bacteria parasites and other triggers of pathology such as malignant transformation all of which cause stress in affected cells Importantly NK cells also link the innate and adaptive immune responses contributing to the initiation of adaptive immune responses and executing adaptive responses using the CD16 FcγRIIIA immunoglobulin Fc receptor Such responses are mediated through two major effector functions the direct cytotoxicity of target cells and the production of cytokines and chemokines The authors focus here on the nature of recognition events by NK cells and address how these events are integrated to trigger these distinct and graded effector functions
