Nature In The Urban Landscape A Study Of City Ecosystems:

Nature in the Urban Landscape Don Gill, Penelope Bonnett, 1973 A discussion of city ecosystems planning for urban wildlife and management of urban wildlife habitats Studies on Los Angeles and its coyotes and London and its wildlife habitats are described **EPA-600/5** , 1974-02 Natura Urbana Matthew Gandy, 2022-03-08 A study of urban nature that draws together different strands of urban ecology as well as insights derived from feminist posthuman and postcolonial thought Postindustrial transitions and changing cultures of nature have produced an unprecedented degree of fascination with urban biodiversity The other nature that flourishes in marginal urban spaces at one remove from the controlled contours of metropolitan nature is not the poor relation of rural flora and fauna Indeed these islands of biodiversity underline the porosity of the distinction between urban and rural In *Natura Urbana* Matthew Gandy explores urban nature as a multilayered material and symbolic entity through the lens of urban ecology and the parallel study of diverse cultures of nature at a global scale Gandy examines the articulation of alternative and in some cases counterhegemonic sources of knowledge about urban nature produced by artists writers scientists as well as curious citizens including voices seldom heard in environmental discourse The book is driven by Gandy's fascination with spontaneous forms of urban nature ranging from postindustrial wastelands brimming with life to the return of such predators as wolves and leopards on the urban fringe Gandy develops a critical synthesis between different strands of urban ecology and considers whether urban political ecology broadly defined might be imaginatively extended to take fuller account of both the historiography of the ecological sciences and recent insights derived from feminist posthuman and postcolonial thought **The Routledge Handbook of Urban Ecology** Ian Douglas, P M L Anderson, David Goode, Michael C. Houck, David Maddox, Harini Nagendra, Puay Yok Tan, 2020-12-15 This second edition covers recent developments around the world with contributors from 33 different countries It widens the handbook's scope by including ecological design consideration of cultural dimensions of the use and conservation of urban nature the roles of government and civil society and the continuing issues of equity and fairness in access to urban greenspaces New features include an emphasis on the biophilic design of homes and workplaces demonstrating the value of nature in order to counter the still prevalent attitude among many developers that nature is a constraint rather than a value The volume explores great practical achievements that have occurred since the first edition with many governments increasingly recognizing and legislating on urban nature and green infrastructure matters since cities play a major role in adapting to change particularly to climate crisis New topics such as the ecological role of light at night and human microbiota in the urban ecosystem are introduced Additional attention is given to food production in cities particularly the multiple roles of urban agriculture and household gardens in different contexts from wealthy communities to the poorest informal settlements in deprived communities The emphasis is on demonstrating what can be achieved and what is already being done The book aims to help scholars and graduate students by providing an invaluable and up to date guide

to current urban ecological thinking across the range of disciplines such as geography ecology environmental science studies planning and urban studies that converge in the study of towns and cities and urban design and living It will also assist practitioners and civil society members in discovering the ways different specialists and thinkers approach urban nature
