A Savanna Food Chain Rebecca Hogue Wojahn, Donald Wojahn, 2009-01-01 Describes food chains in the savanna beginning with carnivores such as a cheetah or a lion and ending with decomposers *Heaven's Eagle* Daniel O'Neil, 2013-10 Heaven's Eagle is a commentary on one of Scripture's most beloved passages Psalm 91 It examines how God dealt with Moses the author of the poem using the figure of an eagle to describe the ways of the Holy Spirit In Heaven's Eagle you'll learn many fascinating insights such as The eagle of Psalm 91 corresponds closely to the imagery of the Passover The cleft of the rock where God hid Moses is actually the place where eagles nest When Israel crossed the Red Sea they were preceded by tens of thousands of eagles The eyesight of an eagle demonstrates seven ways the Holy Spirit gives the believer vision The eagle's mastery of wind gives deep insight into the ways of the Spirit Tales in many cultures speak of eagles fighting dragons types of Satan and the Antichrist Eagles are raptors that carry away prey much as the Holy Spirit will rapture believers Heaven's Eagle is a valuable reference that will give you deeper understanding of Psalm 91 and other biblical passages that speak of the Holy Spirit in the metaphor of an eagle **The Species Problem** David N.

Stamos, 2003-03-17 In this provocative work David N Stamos tackles the problem of determining exactly what a biological species is in short whether species are real and the nature of their reality Although many have written on this topic The Species Problem is the only comprehensive single authored book on this central concern of biology Stamos critically considers the evolution of the three major contemporary views of species species nominalism species as classes and species as individuals Finally he develops his own solution to the species problem a solution aimed at providing a universal species concept worthy of the Modern Synthesis This book will be of interest to philosophers of biology and of science in general to historians of biology and to biologists concerned with one of the most significant and practical conceptual issues in their field

Edward O. Wilson, 1999 This classic by the distinguished Harvard entomologist tells how life on earth evolved and became diverse and now how diversity and life are endangered by us truly While Wilson contributed a great deal to environmental ethics by calling for the preservation of whole ecosystems rather than individual species his environmentalism appears too anthropocentric We should judge every scrap of biodiversity as priceless while we learn to use it and come to understand what it means to humanity And Signals abound that the loss of life's diversity endangers not just the body but the spirit This
