## Nature Of Some Of Our Physical Concepts:

**The Nature of Some of Our Physical Concepts, by P.W. Bridgman** Percy Williams Bridgman, 1952 Ideas for a Hermeneutic Phenomenology of the Natural Sciences Joseph J. Kockelmans, 1993-07-31 I have always had a great interest in the philosophy of science At first this interest led to reflections on the mathematical sciences I later my focus shifted to the natural sciences 2 during the past twenty years or so my interest has also included the behavioral social and historical sciences From the very start my interest was always combined with a concern for the history of the sciences In philosophy of science proper my main interest was not in logical methodological or even epistemological issues although I obviously studied and taught the most important insights proposed in the leading publications in this large field of study My concern has always been predominantly ontological and in that area I have approached the relevant issues from a 4 phenomenological perspective For what follows it is perhaps of some importance to mention here that I came to phenomenology in a rather indirect way through the philosophy of Nicolai Hartmann Yet it was mainly the influence of Herman Van Breda and Alphonse De Waelhens which led me directly to Husserl's phenomenology At first I focused almost exclusively on Husserl's phenomenology Later I moved in the direction of the philosophy of Merleau Ponty and 1 Cf Joseph J Kockelmans Philosophy of Mathematics in the Middle Ages in Dutch Langemark Vonksteen 1953 On the Mode of Being of Mathematical Entities in Dutch in Tijdschrift voor Philosophie 16 1954 pp 289 331 2 Joseph J Kockelmans On Time and Space

causation part 2 from 1870-1899 includes chapters by Hermann Von Helmholtz on the origin and significance of geometrical axioms William Stanley Jevons on the philosophy of inductive inference John Bernard Stallo on the kinetic theory of gasses and the conditions of the validity of scientific hypotheses Ernst Mach on the economical nature of physical inquiry Karl Pearson on perceptual and conceptual space Emile Boutroux on mechanical laws Heinrich Hertz on the appropriateness correctness and permissibility of scientific theories and Ludwig Boltzmann on the fundamental principles and basic equations of mechanics The third part covering the first decade of the twentieth century includes chapters by Henri Jules Poincare on science and reality Charles Peirce on Induction Pierre Marie Duhem on the laws of physics William Ostwald on energetism and mechanics Emile Meyerson on identity of thought and nature as the final goal of science Ernst Cassirer on functional concepts of natural science part 4 from 1910-1927 includes chapters by Charles Dunbar Broad on phenomenalism Alfred North Whitehead on time space and material Bertrand Russell on the world of physics and the world of sense Norman Robert Cambbell on the meaning of science Moritz Schlick on basic issues of the philosophy of natural science and Percy Williams Bridgman on the concepts of space time and causality Philosophy of Science provides a concise single volume text to the discipline and enables students to understand and evaluate the various trends in our contemporary philosophy of science Joseph J Kockelmans is professor emeritus of philosophy at the Pennsylvania State Unvers *Working Knowledge* Joel Isaac, 2012-06-11 Isaac explores how influential thinkers in the mid twentieth century understood the relations among science knowledge and the empirical study of human affairs He places special emphasis on the practical local manifestations of their complex theoretical ideas particularly the institutional milieu of Harvard University *The Nature of the Chemical Concept* Keith S Taber, 2022-06-29 This book offers a step by step analysis and discussion of just why some students find chemistry difficult by examining the nature of chemistry concepts and how they are communicated and learnt **Nature of the Chemical Concept** Keith S Taber, 2019-04-29 The features of chemistry that make it such a fascinating and engaging subject to teach also contribute to it being a challenging subject for many learners Chemistry draws upon a wide range of abstract concepts which are embedded in a large body of theoretical knowledge As a science chemistry offers ideas that are the products of scientists creative imaginations and yet which are motivated and constrained by observations of natural phenomena Chemistry is often discussed and taught largely in terms of non observable theoretical entities such as molecules and electrons and orbitals which probably seem as familiar and real to a chemistry teacher as Bunsen burners and yet comprise a realm as alien and strange to many students as some learners own alternative conceptions misconceptions may appear to the teacher All chemistry teachers know that chemistry is a conceptual subject especially at the upper end of secondary school and at university level and that some students struggle to understand many chemical ideas This book offers a step by step analysis and discussion of just why some students find chemistry difficult by examining the nature of chemistry concepts and how they are communicated and learnt The book considers the idea of concepts itself draws upon case studies

of how canonical chemical concepts have developed explores how chemical concepts become represented in curriculum and in classroom teaching and discusses how conceptual learning and development occurs This book will be invaluable to anyone interested in teaching and learning and offers guidance to teachers looking to make sense of and respond to the challenges of teaching chemistry    The Nature of Ideas Philosophical Union of the University of California,1926    The Nature of Some

of Our Physical Concepts Percy Williams Bridgman,1980    *The Concept of Nature* Alfred North Whitehead,2015-10-07

When *The Concept of Nature* by Alfred North Whitehead was first published in 1920 it was declared to be one of the most important works on the relation between philosophy and science for many years and several generations later it continues to deserve careful attention Whitehead explores the fundamental problems of substance space and time and offers a criticism of Einstein's method of interpreting results while developing his own well known theory of the four dimensional space time manifold With a specially commissioned new preface written by Michael Hampe this book is presented in a fresh series livery for the twenty first century for a new generation of readers
