Nature Yearbook Of Science And Technology 2002:

The Nature Yearbook of Science and Technology Declan Butler, 2002, *China's Scientific Elite* Cong Cao, 2004-07-31 China's Scientific Elite is a study of those scientists holding China's highest academic honour membership of the Chinese Academy of Sciences. Having carried out extensive systematic data collection of CAS members, Cao examines the social stratification system of the Chinese science community and the way in which politics and political interference has effected the stratification. The book then goes on to compare the Chinese system to the stratification of the US scientific elite. The conclusions are fascinating not least because one national elite resides in a democratic liberal social system and the other in an authoritarian social system.

Large-Scale Biomedical Science National Research Council, Division on Earth and Life Studies, Institute of Medicine, National Cancer Policy Board, Committee on Large-Scale Science and Cancer Research, 2003-07-19 The nature of biomedical research has been evolving in recent years. Technological advances that make it easier to study the vast complexity of biological systems have led to the initiation of projects with a larger scale and scope. In many cases, these large scale analyses may be the most efficient and effective way to extract functional information from complex biological systems. *Large Scale Biomedical Science: Exploring Strategies for Research* looks at the role of these new large scale projects in the biomedical sciences. Though written by the National Academies Cancer Policy Board, this book addresses implications of large scale science extending far beyond cancer research. It also identifies obstacles to the implementation of these projects and makes recommendations to improve the process. The ultimate goal of biomedical research is to advance knowledge and provide useful innovations to society. Determining the best and most efficient method for accomplishing that goal, however, is a continuing and evolving challenge. The recommendations presented in *Large Scale Biomedical Science* are intended to facilitate a more open, inclusive, and accountable approach to large scale biomedical research which in turn will maximize progress in understanding and controlling human disease.

[The New Walford Guide to Reference Resources](#) Ray Lester, 2005 *The New Walford* highlights the best resources to use when undertaking a search for accurate and relevant information, saving you precious time and effort. For those looking for a selective and evaluative reference resource that really delivers on its promise, look no further. In addition to print sources, *The New Walford* naturally covers an extensive range of e-reference sources such as digital databanks, digital reference services, electronic journal collections, meta-search engines, networked information services, open archives, resource discovery services, and websites of premier organizations in both the public and private sectors. But rather than supplying a list of all available known resources, as a web search engine might, *The New Walford* subject specialists have carefully selected and evaluated available resources to provide a definitive list of the most appropriate and useful. With an emphasis on quality and sustainability, the subject specialists have been careful to assess the differing ways that information is framed and communicated in different subject areas. As a result, the resource evaluations in each subject area are prefaced by an introductory overview of the structure of

the relevant literature This ensures that The New Walford is clear easy to use and intuitive Publisher **Current British Directories** ,2003 Yearbook of Science and Technology, Taiwan ROC. ,2009 **Science and Technology Policies for the Anti-Terrorism Era** A.D.
