Natures Geography:

Nature's Geography Karl S. Zimmerer, Kenneth R. Young, 1998 Developing countries in Africa Asia and Latin America are increasingly influenced by human induced environmental changes It is crucial that sustainable development be based on insights into these expanding processes conservation as well as deterioration Nature s Geography offers a new perspective on the geographical nature of these changes The book reveals how human environment relations must be understood at multiple scales and time frames Editors Karl S Zimmerer and Kenneth R Young have forged an exciting group of case studies from distinguished geographers focusing on high mountains tropical forests and lowlands as well as humid and arid semiarid landscapes Each chapter analyzes the implications for meshing environmental protection and sound resource use with development The case studies evaluate three topics spatial habitat fragmentation and forest dynamics disturbances in mountain ecosystems and the major activities of settled areas chiefly farming livestock raising and forestry Included are analyses of interactions involving wildlife such as primates and wild pandas assessment of fire impacts and road building long term forest management as well as recent techniques and the role of environmental variation and ecosystem properties in agriculture and rangeland Nature s Geography demonstrates the vital importance of advancing a new approach to geography This definitive study of landscape change and environmental dynamics will have wide appeal for those interested in geography ecology environmental studies conservation biology and development studies *Geography of Natural Resources* Mr. Rohit Manglik, 2024-05-24 Studies the spatial distribution classification and sustainable management of natural resources like minerals water and forests within a geographical framework *Nature's Matrix* Ivette Perfecto, John Vandermeer, Angus Wright, 2009-09-18 Landscapes are frequently seen as fragments of natural habitat surrounded by a sea of agriculture But recent ecological theory shows that the nature of these fragments is not nearly as important for conservation as is the nature of the matrix of agriculture that surrounds them Local extinctions from conservation fragments are inevitable and must be balanced by migrations if massive extinction is to be avoided High migration rates only occur in what the authors refer to as high quality matrices which are created by alternative agroecological techniques as opposed to the industrial monocultural model of agriculture The authors argue that the only way to promote such high quality matrices is to work with rural social movements Their ideas are at odds with the major trends of some of the large conservation organizations that emphasize targeted land purchases of protected areas They argue that recent advances in ecological research make such a general approach anachronistic and call rather for solidarity with the small farmers around the world who are currently struggling to attain food sovereignty Nature s Matrix proposes a radically new approach to the conservation of biodiversity based on recent advances in the science of ecology plus political realities particularly in the world s tropical regions *Nature* Noel Castree, 2005 Exploring the shifting ways in which geographers have studied nature this book emphasizes the relationships and differences between human geography physical geography and resource

and hazards geography The first to consider the topic of nature in modern geography as a whole this distinctive text looks at all its major meanings from the human body and psyche through to the non human world and develops the argument that student readers should abandon the idea of knowing what nature is in favour of a close scrutiny of what agendas lie behind competing conceptions of it It deals with amongst others the following areas the idea of nature the nature of geography de naturalization and re naturalization after nature As everything from global warming to GM foods becomes headline news the use and abuse of nature is on the agenda as never before Synthesizing a wealth of diverse and complex information this text makes the significant theories debates and information on nature accessible to students of geography environmental studies sociology and cultural studies *Restoring Nature* , Using a recent controversy over ecological restoration efforts in Chicago as a touchstone for discussion Restoring Nature explores the difficult questions that arise during the planning and implementation of restoration projects in urban and wildland settings Natural Resources and Conflict in Africa Abiodun Alao,2007 The first comprehensive account of the linkage between natural resources and political and social conflict in Africa
