Ontogeny Cell Differentiation And Structure Of Vascular Plants:

Ontogeny, Cell Differentiation, and Structure of Vascular Plants Roger Buvat, 2012-12-06 With improved microscope and preparation techniques studies of histological structures of plant organisms experienced a revival of interest at the end of the 19th century From that time histological data have substantially studies of the pioneers in botanical science From the beginning of the 20th century the microscope allowed research in cell structure the general functional unit of living beings Advances in cytology gradually influenced histology at first however rather timidly Only the new and spectacular progress in ultrastructural cytology and cytochemistry led to a great increase in modern work on the structures of vascular plants and the related ontogenical and physiological data thanks to the use of the electron microscope and the contribution of molecular biology Not only did new techniques lead to new approaches but achievements in general biology shifted the orientation of research linking investigation to the physiological aspects of cell and tissue differentiation Among these the demonstration of the general principles of development and the characterization of molecules common to plants and animals which control and govern the main basic functions of cells and tissues have widened the scope of modern research on plant structures Present trends in biological research show that it is necessary to know the structures thoroughly from the ultrastructural cytological scale to the scale of tissue and organ arrangement even for physiological research on either cells tissues or whole organs The study of growth factors differentiation or organogenesis can be mentioned as an example

Integrative Plant Anatomy William C. Dickison, 2000-03-10 Presents the basic concepts and terminology of plant anatomy with a special emphasis on its significance and applications to other disciplines This book also highlights the important contribution made by studying anatomy to the solutions of a number of problems It is illustrated with line drawings and photographs

Progress in Botany Karl Esser, 2012-12-06 This series keeps scientists and advanced students specialized on a particular subject informed of the latest developments and results in all different areas of botany The present volume includes reviews on structural botany physiology genetics taxonomy geobotany as well as a contribution treating seed dispersal

Genetic Engineering and Biotechnology Yves Tourte, 2019-03-29 Introductory text for students of genetics is general and the students of agronomy as the book gives numerous agronomic applications

Fluorescing World of Plant Secreting Cells V V Roshchina, 2008-01-01 This book summarizes information on autofluorescence of plant secretory cells as a phenomenon and the possibilities of the practical use of light emission by cell biologists biophysicists biochemists botanists and ecologists

Growth and Development in Plants (Textbook Series: 21st Century Biology and Agriculture) K.V. Krishnamurthy, 2015-06-01 The topic of the book is covered at the cellular tissue organ and organism levels and inputs from all these hierarchical levels of plant organization have been carefully integrated to get a holistic picture of growth and development in plants The book will be useful to undergraduate post graduate and research students and teachers of botany plant sciences plant biotechnology agriculture and forestry

Wood Structure and Environment

Fritz Hans Schweingruber, 2007-06-15 Dendrochronology and wood anatomy developed for decades as two independent scientific fields. It was only in the last decade that it was made clear that the dimension of time is the fourth dimension for both sciences and that it was demonstrated that wood anatomy and dendrochronology are perfect partners. The main aim of this book is to show the hidden ecological richness in stems and roots from trees, shrubs and herbs. It should encourage researchers to consider the anatomic microcosm of wood plants and use it as a retrospective source of information solving problems related to ecophysiology, competition, site conditions, population biology, earth science, wood quality and even human history.

The World's Construction Mechanism Jacques Barnouin, 2020-04-28 The interdisciplinarity between the biological and human sciences is here to serve a daring objective: to decipher by means of a logical chain the explanatory factors of human trajectories and imbalances between societies and nations. To do this, *The World's Construction Mechanism* is based on an unprecedented analysis of the dynamics of the human species, combining the contributions of anthropology, archeology, biology, climatology, economics, geography, history and sociology. This book analyzes the roots of societal disharmony and presents ways of realizing a clear-sighted human project that is in step with the general interest of humanity.

Comprehensive Natural Products II, 2010-03-05 This work presents a definitive interpretation of the current status of and future trends in natural products, a dynamic field at the intersection of chemistry and biology concerned with isolation, identification, structure elucidation and chemical characteristics of naturally occurring compounds such as pheromones, carbohydrates, nucleic acids and enzymes. With more than 1 800 color figures, *Comprehensive Natural Products II* features 100% new material and complements rather than replaces the original work 1999. Reviews the accumulated efforts of chemical and biological research to understand living organisms and their distinctive effects on health and medicine. Stimulates new ideas among the established natural products research community which includes chemists, biochemists, biologists, botanists and pharmacologists. Informs and inspires students and newcomers to the field with accessible content in a range of delivery formats. Includes 100% new content with more than 6 000 figures, 1 3 of these in color and 40 000 references to the primary literature for a thorough examination of the field. Highlights new research and innovations concerning living organisms and their distinctive role in our understanding and improvement of human health, genomics, ecology, environment and more. Adds to the rich body of work that is the first edition which will be available for the first time in a convenient online format giving researchers complete access to authoritative Natural Products content.

Stable Isotopes as Indicators of Ecological Change, 2011-09-21 The 20th century has experienced environmental changes that appear to be unprecedented in their rate and magnitude during the Earth's history. For the first time, *Stable Isotopes as Indicators of Ecological Change* brings together a wide range of perspectives and data that speak directly to the issues of ecological change using stable isotope tracers. The information presented originates from a range of biological and geochemical sources and from research fields within biological, climatological and physical disciplines covering time scales

from days to centuries Unlike any other reference editors discuss where isotope data can detect record trace and help to interpret environmental change Provides researchers with groundbreaking data on how to predict the terrestrial ecosystems response to the ongoing rapid alterations Reveals how ecosystems have responded to environmental and biotic fluctuations in the past Includes examples from research by a wide range of biological and physical scientists who are using isotopic records to both detect and interpret environmental change
