Next Generation Transport Networks Manohar Naidu Ellanti, Steven Scott Gorshe, Lakshmi G. Raman, Wayne D. Grover, 2005-12-05 Next Generation Transport Networks Data Management and Control Planes provides a tutorial and reference information for next generation telecommunication network technologies This insightful and accessible overview includes key technologies that comprise the backbone of the networking infrastructure such as access metro and long haul segments Written by industry veterans this work uniquely balances and blends three key perspectives on high speed networks fundamental to understanding transport mechanisms for potential implementation the data management and control planes Readers will readily learn how transport networks function how they are used how layers are managed and how standards guide developing technologies Included in this volume Industry standards from the ITU T G and M series ANSI ATIS and IEEE Future data plane trends in terms of

mapping Ethernet frames streams or IP packets into PoS and GFP for WAN transport virtual concatenation with LCAS of SONET DS1 DS3 E1 E3 and OTN signals optical transport including G 709 OTN and MAN WAN data access through IEEE 802 17 RPR Switching High speed circuit and packet switching using multi stage Clos as well as multi dimensional distributed switching approaches Control Plane SS7 ATM PNNI Automatic Switched Optical Transport Network Architecture G ASON G ASTN and protocols for routing and signaling GMPLS RSVP TE OSPF TE Transport Network architectures for access metro and long haul segments Self healing perspectives on protection and restoration across ring and mesh topologies discussion of new and emerging approaches for restoration such as p cycle SBPP PWCE Transport Network Management TMN layers transport network management requirements technologies SNMP SOAP XML TL1 and OSMINE The depth and breadth of coverage coupled with carefully chosen illustration e g of the complex frame formats and summary tables for quick reference make Next Generation Transport Networks Data Management and Control Planes valuable for telecommunications professionals as well as a handy reference for network researchers

Traffic Grooming for Optical Networks Rudra Dutta,Ahmed E. Kamal,George N. Rouskas,2008-08-06 The objective of this book is to provide timely and comprehensive coverage of the principles technology practice and future of traffic grooming in optical networks Traffic grooming considerations are already shaping new switch designs and standards including next generation Synchronous Optical Network Synchronous Digital Hierarchy SONET SDH and Generic Framing Procedure GFP are affecting future optical network technologies and are creating new business opportunities Yet information on the topic is scattered and there is a shortage of technical sources where relevant material can be accessed in a single location The motivation for this book was to bridge this gap by providing a single authoritative point of reference to the traffic grooming state of the art Traffic grooming is a complex subject involving a number of interrelated concepts standards and technologies It is also a rapidly growing field of study making it difficult for a single book to cover all aspects in detail To cope with this scope and complexity this book provides appropriate background information followed by an in depth study of a few key issues and challenges It has been our intention to bring together a broad range of perspectives from preeminent researchers in both academia and industry We believe that these multiple diverse points of view add considerable value and make the contents more interesting to the reader

Path Routing in Mesh Optical Networks Eric Bouillet,Georgios Ellinas,Jean-Francois Labourdette,Ramu Ramamurthy,2007-10-24 Transport networks evolved from DCS Digital Cross connect Systems based mesh architectures to SONET SDH Synchronous Optical Networking Synchronous Digital Hierarchy ring architectures in the 1990 s In the past few years technological advancements in optical transport switches have allowed service providers to support the same fast recovery in mesh networks previously available in ring networks while achieving better capacity efficiency and resulting in lower capital cost Optical transport networks today not only provide trunking capacity to higher layer networks such as inter router connectivity in an IP centric infrastructure but also support efficient routing and fast failure recovery of high bandwidth

services This is possible due to the emergence of optical network elements that have the intelligence required to efficiently control the network Optical mesh networks will enable a variety of dynamic services such as bandwidth on demand Just In Time bandwidth bandwidth scheduling bandwidth brokering and optical virtual private networks that open up new opportunities for service providers and their customers alike Path Routing in Mesh Optical Networks combines both theoretical as well as practical aspects of routing and dimensioning for mesh optical networks All authors have worked as technical leaders for the equipment vendor Tellium who implemented such capabilities in its product and whose product was deployed in service provider networks Path Routing in Mesh Optical Networks Presents an in depth treatment of a specific class of optical networks i e path oriented mesh optical networks Focuses on routing and recovery dimensioning performance analysis and availability in mesh optical networks Explains and analyses routing specifically associated with Dedicated Backup Path Protection DBPP and Shared Backup Path Protection SBPP recovery architectures As most of the core backbone networks evolve to mesh topologies utilizing intelligent network elements for provisioning and recovery of services Path Routing in Mesh Optical Networks will be an invaluable tool for both researchers and engineers in the industry who are responsible for designing developing deploying and maintaining mesh optical networks It will also be a useful reference book for graduate students and university professors who are interested in optical networks or telecommunications networking With a foreword by Professor Wayne D Grover author of the book Mesh Based Survivable Networks
