Poincare Seminar 2003 J. Dalibard, Bertrand Duplantier, Vincent Rivasseau, 2004 This volume contains the third and fourth Poincar Seminar both held in 2003 The third one is devoted to Bose Einstein Condensation it covers the physics of superfluid liquid helium as well as the recently discovered atomic Bose Einstein condensates Major experimental results are presented together with relevant theoretical approaches and remaining open questions The fourth one is devoted to Entropy giving a comprehensive account of the history and various realizations of this concept from thermodynamics to black holes and includes theoretical and experimental discussions of the corresponding fluctuations for mesoscopic systems near equilibrium

The Mathematics of the Bose Gas and its Condensation Elliott H. Lieb, Robert Seiringer, Jan Philip Solovej, Jakob Yngvason, 2005-06-16 This book contains a unique survey of the mathematically rigorous results about the quantum mechanical many body problem that have been obtained by the authors in the past seven years It addresses a topic that is not only rich mathematically using a large variety of techniques in mathematical analysis but is also one with strong ties to current experiments on ultra cold Bose gases and Bose Einstein condensation The book provides a pedagogical entry into an active area of ongoing research for both graduate students and researchers It is an outgrowth of a course given by the authors for graduate students and post doctoral researchers at the Oberwolfach Research Institute in 2004 The book also provides a coherent summary of the field and a reference for mathematicians and physicists active in research on quantum mechanics

Einstein, 1905-2005 Thibault Damour, Olivier Darrigol, Vincent Rivasseau, 2009-09-03 This book is the fourth in a series of lectures of the S eminaire Poincar e which is directed towards a large audience of physicists and of mathematicians The goal of this seminar is to provide up to date information about general topics of great interest in physics Both the theoretical and experimental aspects are covered with some historical background Inspired by the Bourbaki seminar in mathematics in its organization hence nicknamed Bourbaphi the Poincar e Seminar is held twice a year at the Institut Henri Poincar e in Paris with contributions prepared in advance Particular care is devoted to the pedagogical nature of the presentations so as to fulfill the goal of being readable by a large audience of scientists This volume contains the seventh such Seminar held in 2005 It is devoted to Einstein's 1905 papers and their legacy After a presentation of Einstein's epistemological approach to physics and the genesis of special relativity a central perspective is offered The geometry of

relativistic spacetime is explained in detail Single photon experiments are presented as a spectacular realization of Einstein's light quanta hypothesis A previously unpublished lecture by Einstein which presents an illuminating point of view on statistical physics in 1910 at the dawn of quantum mechanics is reproduced The volume ends with an essay on the historical physical and mathematical aspects of Brownian motion We hope that the publication of this series will serve the community of physicists and mathematicians at the graduate student or professional level Poincaré Seminar 2002 Vincent Rivasseau, 2003-04-24 The Poincaré Seminar is held twice a year at the Institut Henri Poincaré in Paris This volume contains the lectures of the 2002 seminars The main topic of the first one was the vacuum energy in particular the Casimir effect and the nature of the cosmological constant The second one concentrated on renormalization giving a comprehensive account of its mathematical structure and applications to high energy physics statistical mechanics and classical mechanics Students will find excellent introductions to the subjects with further lectures leading to the frontiers of experimental and theoretical research scientists will profit from contributions by outstanding experts **Entropy Methods for the Boltzmann Equation** Fraydoun Rezakhanlou, Cédric Villani, 2007-11-14 Featuring updated versions of two research courses held at the Centre M. Borel in Paris in 2001 this book describes the mathematical theory of convergence to equilibrium for the Boltzmann equation and its relation to various problems and fields It also discusses four conjectures for the kinetic behavior of the hard sphere models and formulates four stochastic variations of this model also reviewing known results for these

Bose-Einstein Condensation A. Griffin, D. W. Snoke, S. Stringari, 1995-04-06 This book is devoted to BEC as an interdisciplinary subject covering atomic and molecular physics laser physics low temperatures and astrophysics and it will serve as an in depth report on recent progress and will suggest promising research topics for graduate students and researchers in physics
