*Real Options in Capital Investment* Lenos Trigeorgis, 1995-01-24  
 This compilation integrates various new contributions to the growing real options literature. Recent developments in the valuation of capital investment opportunities seen as real options, e.g. to defer, expand, abandon, or switch, have provided the tools and unlocked the possibilities to revolutionize the field of capital budgeting. The resulting insights, strategies, and techniques enable quantifying the thus far elusive elements of managerial operating flexibility and strategic interactions. These are vital to successfully capitalize on favorable future investment opportunities or limit losses from adverse market developments. This book presents various models and operating strategies and a variety of applications ranging from acquisitions and divestitures to natural resource development and pollution compliance. It is intended for both the academic and the professional market. The book's contributions are divided into five parts covering sections on real options and alternative valuation paradigms for capital investment analysis, on the analysis of general exchange or switching options, and

interdependencies among multiple such options on strategic acquisitions infrastructure and foreign investment options on mean reversion alternative formulations in natural resource investments shipping and start up ventures and on other applications in pollution compliance land development flexible manufacturing and financial default options Both academic and practitioner interest in these developments is unusually high The book can serve as supplementary material for the academic market e g in advanced finance courses in option pricing or capital budgeting in doctoral seminars and as a library resource It may also be of interest to the professional market e g corporate planners and finance executives in the oil pharmaceutical auto and a variety of other industries academics from related areas e g decision analysts or economists as well as to international readers academics doctoral students and professionals

*Real Options and Corporate Strategy* Christian Berner, 2000-03-01 Inhaltsangabe Abstract Every investment for example new facilities new products or strategic partnerships is driven by the pursuit of creating values Major changes are going on in the valuation of investments Although the classic shareholder value concept is still a valuable source for identification of value drivers of strategic management it needs to be extended in terms of its ability to evaluate long term investment choices Far too long capital budgeting has only been considered under aspects of its contribution to an overall added economic value rather than focusing on a firm's resources Recent research emphasized the strategic value of resources leading to formulate the approach of a resource based view of a firm's activities Usually management tries to capture future development with static methods of capital budgeting i e future cash flows are discounted with a fixed risk adjusted discount rate However the finding of present values and capitalized values could produce pitfalls in investment decisions Strategic investment decisions are often characterized by a wide range of possibilities to react flexibly to the changing business environment This area of tolerance in investment decisions could not be captured with traditional instruments of investment evaluation In the 1970s the discounted cash flow analysis DCF emerged and proved its practicability This method assumes a now or never approach in undertaking a project Some authors suggest adding the theory of option prices to investment decisions as in the 1970s and the 1980s developments in the valuation of capital investment opportunities based on option pricing revolutionized capital budgeting Option pricing allows adaptation and revision of future decisions in order to capture managerial flexibility and to finally capitalize on any possible future development To incorporate these real options means to limit losses and offers a vital contribution to long term corporate success especially in those marketplaces characterized by uncertainty and rapid change This method also explains the value of waiting for the initial project and considers its value in comparison to the opportunity costs of waiting These costs are dictated by the behavior of competitors and loss of cash flow streams from the project Incorporating this method could possibly lead to a better understanding of the importance of resource allocation the value of strategic investments and
