Real Time Programming 1999:

Real Time Programming 1999 A.H. Frigeri, W.A. Halang, S.H. Son, 1999 In 1999 the IFAC IFIP Workshop on Real Time Programming WRTP joined forces with the Workshop on Active and Real Time Database Systems ARTDB Both series of workshops provide an excellent forum for exchanging information on recent scientific and technological advances and practices in real time computing a field that is becoming an essential enabling discipline of both control engineering and computer science and engineering The annual Workshop on Real Time Programming and the bi annual Workshop on Active and Real time Databases Systems are intended as meetings of relatively small numbers of experts in their fields taking place as truly international events The 1999 Workshop maintained the outstanding quality of both series providing an opportunity to assess the state of the art to present new results and to discuss possible lines of future developments Primarily it focused on software development for real time systems real time operating systems and active and real time database systems In particular the technical programme of the Workshop covered latest research and developments in requirements engineering software engineering active and real time database systems communication and clock synchronisation embedded systems formal methods operating systems and scheduling Out of 58 submissions from 19 countries the International Programme Committee selected 26 regular papers and 8 reserve papers for presentation at the Workshop Contributions come from Europe North America Australia and the Far East In addition to these the programme also featured two world renowned keynote speakers and a discussion panel about the state of the art in the field of active real time database systems

Software Engineering - ESEC/FSE '99 Oskar Nierstrasz, Michel Lemoine, 1999-08-30 For the second time the European Software Engineering Conference is being held jointly with the ACM SIGSOFT Symposium on the Foundations of Software Engineering FSE Although the two conferences have different origins and traditions there is a significant overlap in intent and subject matter Holding the conferences jointly when they are held in Europe helps to make these thematic links more explicit and encourages researchers and practitioners to attend and submit papers to both events The ESEC proceedings have traditionally been published by Springer Verlag as they are again this year but by special arrangement the proceedings will be distributed to members of ACM SIGSOFT as is usually the case for FSE ESEC FSE is being held as a single event rather than as a pair of colocated events Submitted papers were therefore evaluated by a single program committee ESEC FSE represents a broad range of software engineering topics in mainly two continents and consequently the program committee members were selected to represent a spectrum of both traditional and emerging software engineering topics A total of 141 papers were submitted from around the globe Of these nearly half were classified as research papers a quarter as experience papers and the rest as both research and experience papers Twenty nine papers from five continents were selected for presentation and inclusion in the proceedings Due to the large number of industrial experience reports submitted we have also introduced this year two sessions on short case study presentations

Secure Internet Programming Jan Vitek, Christian D. Jensen, 2007-10-23 Large scale open distributed systems provide an infrastructure for assembling global applications on the basis of software and hardware components originating from multiple sources Open systems rely on publicly available standards to permit heterogeneous components to interact The Internet is the archetype of a large scale open distributed system standards such as HTTP HTML and XML together with the widespread adoption of the Java language are the cornerstones of many distributed systems This book surveys security in large scale open distributed systems by presenting several classic papers and a variety of carefully reviewed contributions giving the results of new research and development Part I provides background requirements and deals with fundamental issues in trust programming and mobile computations in large scale open distributed systems Part II contains descriptions of general concepts and Part III presents papers detailing implementations of security concepts **FM'99 - Formal Methods**

Jeannette M. Wing, Jim Woodcock, Jim Davies, 1999-09-13 Formal methods are coming of age Mathematical techniques and tools are now regarded as an important part of the development process in a wide range of industrial and governmental organisations A transfer of technology into the mainstream of systems development is slowly but surely taking place FM 99 the First World Congress on Formal Methods in the Development of Computing Systems is a result and a measure of this new found maturity It brings an impressive array of industrial and applications oriented papers that show how formal methods have been used to tackle real problems These proceedings are a record of the technical symposium of FM 99 also side the papers describing applications of formal methods you will find technical reports papers and abstracts detailing new advances in formal techniques from mathematical foundations to practical tools The World Congress is the successor to the four Formal Methods Europe Symposia which in turn succeeded the four VDM Europe Symposia This session reflects an increasing openness within the international community of researchers and practitioners papers were submitted covering a wide variety of formal methods and application areas The programme committee reflects the Congress's international nature with a membership of 84 leading researchers from 38 different countries The committee was divided into 19 tracks each with its own chair to oversee the reviewing process Our collective task was a difficult one there were 259 high quality submissions from 35 different countries

Design Methods and Applications for Distributed Embedded Systems Bernd Kleinjohann, Guang R. Gao, Hermann Kopetz, Lisa Kleinjohann, Achim Rettberg, 2006-04-11 The IFIP TC 10 Working Conference on Distributed and Parallel Embedded Systems DIPES 2004 brings together experts from industry and academia to discuss recent developments in this important and growing field in the splendid city of Toulouse France The ever decreasing price performance ratio of microcontrollers makes it economically attractive to replace more and more conventional mechanical or electronic control systems within many products by embedded real time computer systems An embedded real time computer system is always part of a well specified larger system which we call an intelligent product Although most intelligent products start out as stand alone units many of them are required to interact with other systems at a later stage At present many industries are in the middle of this transition from stand alone products to networked embedded systems This transition requires reflection and architecting The complexity of the evolving distributed artifact can only be controlled if careful planning and principled design methods replace the hoc engineering of the first version of many standalone embedded products
