**Methods** Marie-Claude Gaudel,Jim Woodcock,1996-03-06 This book presents the refereed proceedings of the Third International Symposium of Formal Methods Europe FME 96 held in Oxford UK in March 1996 FME 96 was co sponsored by IFIP WG 14 3 and devoted to the application and demonstrated industrial benefit of formal methods their new horizons and strengthened foundations The 35 full revised papers included were selected from a total of 103 submissions also included are three invited papers The book addresses all relevant aspects of formal methods from the point of view of the industrial R D professional as well as from the academic viewpoint and impressively documents the significant progress in the use of formal methods for the solution of real world problems Software Reuse: Advances in Software Reusability William B.

Frakes,2004-02-02 This book constitutes the refereed proceedings of the 6th International Conference on Software Reuse ICSR 6 held in Vienna Austria in June 2000 The 26 revised full papers presented were carefully reviewed and selected from numerous submissions The book is divided into topical sections on generative reuse and formal description languages object oriented methods product line architectures requirements reuse and business modeling components and libraries and design patterns **Model-Based Engineering of Embedded Real-Time Systems** Holger Giese,Gabor Karsai,Edward A.

Lee, Bernhard Rumpe, Bernhard Schätz, 2010-10-09 The topic of Model Based Engineering of Real Time Embedded Systems brings together a challenging problem domain real time embedded systems and a solution domain model based engineering. It is also at the forefront of integrated software and systems engineering as software in this problem domain is an essential tool for system implementation and integration. Today real time embedded software plays a crucial role in most advanced technical systems such as airplanes, mobile phones and cars and has become the main driver and catalyst for innovation. Development, verification, configuration and maintenance of embedded and distributed software nowadays are often serious challenges as drastic increases in complexity can be observed in practice. Model based engineering in general and model based software development in particular advocates the notion of using models throughout the development and life cycle of an engineered system. Model based software engineering reinforces this notion by promoting models not only as the tool of abstraction but also as the tool for verification, implementation, testing and maintenance. The application of such model based engineering techniques to embedded real time systems appears to be a good candidate to tackle some of the problems arising in the problem domain.

Dependable Computing EDCC-4 Fabrizio Grandoni, 2003-08-02 It was with great pleasure that on behalf of the entire organizing committee I welcomed participants to EDCC 4 the Fourth European Dependable Computing Conference held for the first time in France. The fourth issue of EDCC carried on the traditions established by the previous conferences in this series. EDCC 1 was held in Berlin, Germany in October 1994, EDCC 2 in Taormina, Italy in October 1996 and EDCC 3 in Prague, Czech Republic in September 1999. EDCC evolved from a merger of two other conference series at the moment when the Iron Curtain fell. One of these known as the International Conference on Fault Tolerant Computing Systems was organized during the period 1982-1991 by the German Technical Interest Group Fault Tolerant Computing Systems. The other series known as the International Conference on Fault Tolerant Systems and Diagnostics was organized during the period 1975-1990 in the former Czechoslovakia, Poland, Bulgaria and the former GDR. The composition of the EDCC steering committee and the organizing committees of the successive issues of the conference have mirrored the East-West unification character of the conference series. The EDCC conference is becoming a unique meeting point for researchers and practitioners from all over the world in the field of Dependable Systems. It is organized by the SEE Working Group Dependable Computing in France, the GI/ITG/GMA Technical Committee on Dependability and Fault Tolerance in Germany and the AICA Working Group Dependability of Computer Systems in Italy. Furthermore, committees of several global professional organizations such as IEEE and IFIP support the conference.
