practice and he is alert always to the wider philosophical practical and political implications of conflicting views These two volumes fully display the variety of his ideas and confirm the originality and significance of his work Realism, Rationalism and Scientific Method James Alfred Martin,1984 **Problems of Empiricism: Volume 2** Paul Feyerabend,1985-06-30 Volume 1 presents papers on the interpretation of scientific theories together with papers applying the views developed to particular problems in philosophy and physics The essays in volume 2 examine the origin and history of an abstract rationalism as well as its consequences for the philosophy of science and methods of scientific research **Scientific Realism** Stathis Psillos,2005-08-02 Scientific realism is the optimistic view that modern science is on the right track that the world really is the way our best scientific theories describe it In his book Stathis Psillos gives us a detailed and comprehensive study which restores the intuitive plausibility of scientific realism We see that throughout the twentieth century scientific realism has been challenged by philosophical positions from all angles from reductive empiricism to instrumentalism and to modern sceptical empiricism Scientific Realism explains that the history of science does not undermine the arguments for scientific realism but instead makes it reasonable to accept scientific realism as the best philosophical account of science its empirical success its progress and its practice Anyone wishing to gain a deeper understanding of the state of modern science and why scientific realism is plausible should read this book Scientific Realism and the Rationality of Science Howard Sankey,2016-04-01 Scientific realism is the position that the aim of science is to advance on truth and increase knowledge about observable and unobservable aspects of the mind independent world which we inhabit This book articulates and defends that position In presenting a clear formulation and addressing the major arguments for scientific realism Sankey appeals to philosophers beyond the community of typically Anglo American analytic philosophers of science to appreciate and understand the doctrine The book emphasizes the epistemological aspects of scientific realism and contains an original solution to the problem of induction that rests on an appeal to the principle of uniformity of nature **Kuhn's The Structure of Scientific Revolutions Revisited** Vasso Kindi,Theodore Arabatzis,2013-05-20 The year 2012 marks the 50th anniversary of the publication of Thomas S Kuhn's *The Structure of Scientific Revolutions* Up until recently the book's philosophical reception has been shaped for the most part by the debates and the climate in philosophy of science in the 1960s and 1970s this new collection of essays takes a renewed look at this work This volume concentrates on particular issues addressed or raised in light of recent scholarship and without the pressure of the immediate concerns scholars had at the time of the *Structure*'s publication There has been extensive research on all of the major issues concerning the development of science which are discussed in *Structure* work in which the scholars contributing to this volume have all been actively involved In recent years they have pursued novel research on a number of topics relevant to *Structure*'s concerns such as the nature and function of concepts the complexity of logical positivism and its legacy the relation of history to philosophy of science the character of scientific progress and rationality

and scientific realism all of which are brought together and given new light in this text In this way our book makes new connections and undertakes new approaches in an effort to understand the Structure s significance in the canon of philosophy of science *Theories of Scientific Method* Robert Nola,Howard Sankey,2014-12-18 What is it to be scientific Is there such a thing as scientific method And if so how might such methods be justified Robert Nola and Howard Sankey seek to provide answers to these fundamental questions in their exploration of the major recent theories of scientific method Although for many scientists their understanding of method is something they just pick up in the course of being trained Nola and Sankey argue that it is possible to be explicit about what this tacit understanding of method is rather than leave it as some unfathomable mystery They robustly defend the idea that there is such a thing as scientific method and show how this might be legitimated This book begins with the question of what methodology might mean and explores the notions of values rules and principles before investigating how methodologists have sought to show that our scientific methods are rational Part 2 of this book sets out some principles of inductive method and examines its alternatives including abduction IBE and hypothetico deductivism Part 3 introduces probabilistic modes of reasoning particularly Bayesianism in its various guises and shows how it is able to give an account of many of the values and rules of method Part 4 considers the ideas of philosophers who have proposed distinctive theories of method such as Popper Lakatos Kuhn and Feyerabend and Part 5 continues this theme by considering philosophers who have proposed naturalised theories of method such as Quine Laudan and Rescher This book offers readers a comprehensive introduction to the idea of scientific method and a wide ranging discussion of how historians of science philosophers of science and scientists have grappled with the question over the last fifty years

Scientific Concepts and Investigative Practice Uljana Feest,Friedrich Steinle,2012-10-30 Recent philosophy and history of science has seen a surge of interest in the role of concepts in scientific research Scholars working in this new field focus on scientific concepts rather than theories as units of analysis and on the ways in which concepts are formed and used rather than on what they represent They analyze what has traditionally been called the context of discovery rather than or in addition to the context of justification And they examine the dynamics of research rather than the status of the finished research results This volume provides detailed case studies and general analyses to address questions raised by these points such as Can concepts be clearly distinguished from the sets of beliefs we have about their referents What if any sense can be made of the separation between concepts and theories Can we distinguish between empirical and theoretical concepts Are there interesting similarities and differences between the role of concepts in the empirical sciences and in mathematics What underlying notion of investigative practice could be drawn on to explicate the role of concept in such practice From a philosophical point of view is the distinction between discovery and justification a helpful frame of reference for inquiring into the dynamics of research From a historiographical point of view does a focus on concepts face the danger of falling back into an old fashioned history of ideas The Politics and Rhetoric of Scientific Method J. Schuster,R.R. Yeo,2012-12-06 The

institutionalization of History and Philosophy of Science as a distinct field of scholarly endeavour began comparatively early though not always under that name in the Australasian region. An initial lecturing appointment was made at the University of Melbourne immediately after the Second World War in 1946 and other appointments followed as the subject underwent an expansion during the 1950s and 1960s similar to that which took place in other parts of the world. Today there are major Departments at the University of Melbourne, the University of New South Wales and the University of Wollongong and smaller groups active in many other parts of Australia and in New Zealand. Australasian Studies in History and Philosophy of Science aims to provide a distinctive publication outlet for Australian and New Zealand scholars working in the general area of history, philosophy and social studies of science. Each volume comprises a group of essays on a connected theme edited by an Australian or a New Zealander with special expertise in that particular area. Papers address general issues however rather than local ones; parochial topics are avoided. Further more though in each volume a majority of the contributors is from Australia or New Zealand contributions from elsewhere are by no means ruled out. Quite the reverse in fact they are actively encouraged wherever appropriate to the balance of the volume in question.

Mapping Scientific Method Gita Chadha, Renny Thomas, 2022-07-19. This volume explores how the scientific method enters and determines the dominant methodologies of various modern academic disciplines. It highlights the ways in which practitioners from different disciplinary backgrounds—the humanities, the natural sciences and the social sciences—engage with the scientific method in their own disciplines. The book maps the discourse within each of the disciplines that critiques the scientific method from different social locations in order to argue for more complex and nuanced approaches in methodology. It also investigates the connections between the method and the structures of power and domination which exist within these disciplines. In the process it offers a new way of thinking about the philosophy of the scientific method. Part of the Science and Technology Studies series, this volume is the first of its kind in the South Asian context to debate scientific methods and address questions by scholars based in the global south. It will be useful to students and practitioners of science, humanities, social sciences, philosophy of science and philosophy of social science. Research scholars from these disciplines, especially those engaging in interdisciplinary research, will also benefit from this volume.

Kuhn's Intellectual Path K. Brad Wray, 2021-09-30. Thomas Kuhn's *The Structure of Scientific Revolutions* offers an insightful and engaging theory of science that speaks to scholars across many disciplines. Though initially widely misunderstood, it had a profound impact on the way intellectuals and educated laypeople thought about science. K. Brad Wray traces the influences on Kuhn as he wrote *Structure*, including his Aristotle epiphany, his interactions and his studies of the history of chemistry. Wray then considers the impact of *Structure* on the social sciences, on the history of science and on the philosophy of science, where the problem of theory change has set the terms of contemporary realism/anti-realism debates. He examines Kuhn's frustrations with the Strong Programme, sociologists' appropriations of his views and debunks several popular claims about what influenced Kuhn as he

wrote *Structure of Science*. His book is a rich and comprehensive assessment of one of the most influential works in the modern sciences.

Mary B. Hesse (1924–2016): *Metaphors, Models, and the Growth of Scientific Knowledge* Pietro Gori, 2025-08-20 This volume explores the work of Mary B. Hesse (1924–2016), a pivotal figure in twentieth-century philosophy of science. At a time when the foundations of an integrated approach to the history and philosophy of science were being established, Hesse, as a female philosopher, offered a distinctive and influential contribution grounded in a post-empiricist understanding of the natural sciences. Central to her thought was a focus on the metaphorical and analogical value of scientific language in contrast to views assessing its literal significance. Hesse also departed from traditional hypothetico-deductive accounts of scientific methodology and theory structure, advancing instead perspectives rooted in both historical and contemporary scientific practices. To mark the centenary of her birth, this book brings together an international group of scholars to re-examine and engage with Hesse's intellectual legacy. The chapters address the central themes of her work and situate them within her broader philosophical context. Each contribution adopts a cross-disciplinary perspective, highlighting the continued relevance of Hesse's ideas to current debates in the philosophy of science. This volume will be of particular interest to scholars in the history and philosophy of science as well as those engaged in gender studies and the study of women in philosophy.

Managing and Engineering in Complex Situations Samuel F. Kovacic, Andres Sousa-Poza, 2013-02-15 With so many terms available to define the same thing, it would seem nearly irresponsible to introduce yet another term: complex situation. To describe a phenomenological state of such as a system. However, a complex situation infers both a broader meaning and imposes a different perspective. Complex, in this context, is dependent on understanding and reality rather than observer and knowledge. Situation imposes a gestalt that cannot be characterized within a singular perspective that relegates paradox to a superior-subordinate hierarchy. This also infers that complex situation has no monotonic definition or each definition is by default incomplete. Therefore, the perennial derivations for systems such as complex systems, system of systems, federation of systems, is no longer a sufficient descriptor for complex situation. Ergo, system and its genealogy lack the constitution to define complex situations. The book's intent is to explore this pathology through a series of papers written by authors that work in complex situations and have dealt with the limitations of the status quo systems.

Scientific Theories and Philosophical Stances Claus Beisbart, Michael Frauchiger, 2024-05-20 Since the publication of his seminal monograph *The Scientific Image*, Bas van Fraassen is a key figure in philosophy of science. In this book, other philosophers with various outlooks critically discuss his work on theories, empiricism, and philosophical stances. The book starts with a new article by van Fraassen on his preferred account of theories, the so-called semantic view. This account is now 50 years old, and van Fraassen takes this anniversary as an opportunity to review the account, its history, and the philosophical discussion about it. In the main part of the book, Nancy Cartwright, Finnur Dellsén, Matthias Egg, Steven French, Michael Friedman, Milena Ivanova, and Michela Massimi discuss van Fraassen's contributions to philosophy. Three chapters focus on his engagement

with realism French Friedman Ivanova Others study his voluntarism Cartwright and his view on representation Massimi Finally there are contributions about his elaboration of empiricism Dells n and his proposal to consider philosophical positions as stances Egg The volume includes a laudatio written by Steven French and finishes with a reply by van Fraassen to his critics

Economics and the Philosophy of Science Deborah A. Redman, 1991 Economists and other social scientists in this century have often supported economic arguments by referring to positions taken by philosophers of science This important new book looks at the reliability of this practice and in the process provides economists social scientists and historians with the necessary background to discuss methodological matters with authority Redman presents an accurate critical yet neutral survey of the modern philosophy of science from the Vienna Circle to the present focusing particularly on logical positivism sociological explanations of science Polanyi Fleck Kuhn the Popper family and the history of science She then deals with economic methodology in the twentieth century looking at a wide range of methodological positions especially those supported by positions from the philosophy of science
