Shaping Our Selves Erik Parens, 2015 When bioethicists debate the ethics of using technologies like surgery and pharmacology to shape our selves they are debating what it means for human beings to flourish They are debating what makes animals like us truly happy and whether the technologies at issue will bring us closer to or farther from such happiness The positions that participants adopt in debates regarding such ancient and fundamental questions are often polarized and cannot help but be deeply personal It is no wonder that these debates are sometimes acrimonious How can critics of and enthusiasts about technological self transformation move forward in the midst of polarizing arguments Based on his experience as a scholar at The Hastings Center the oldest free standing bioethics research institute in the world Erik Parens proposes a habit of thinking which he calls Binocular thinking lets us benefit from the insights that are visible from the stance of the enthusiast who emphasizes that using technology to creatively transform our selves will make us happier and to benefit from the insights that are visible

from the stance of the critic who emphasizes that learning to let ourselves be will make us happier Because these debates ultimately entail critics and enthusiasts giving justifications for their own ways of being in the world they entail the exchange of more than just impartial reasons In the throes of our passion to make our case we exaggerate our insights and all too often fall into the conceptual traps that our languages constantly set for us Are human beings by nature creators or creatures Are technologies morally neutral or value laden Is disability a medical or a social phenomenon Indeed are we free or determined Parens explains how participating in these debates helped him articulate a habit of thinking which is better at benefiting from the insights embedded in both poles of those binaries than was the habit of thinking he brought

Coming to Our Senses Susan R. Barry, 2021-06-08 A neurobiologist reexamines the personal nature of perception in this groundbreaking guide to a new model for our senses We think of perception as a passive mechanical process as if our eyes are cameras and our ears microphones But as neurobiologist Susan R Barry argues perception is a deeply personal act Our environments our relationships and our actions shape and reshape our senses throughout our lives This idea is no more apparent than in the cases of people who gain senses as adults Barry tells the stories of Liam McCoy practically blind from birth and Zohra Damji born deaf in the decade following surgeries that restored their senses As Liam and Zohra learned entirely new ways of being Barry discovered an entirely new model of the nature of perception Coming to Our Senses is a celebration of human resilience and a powerful reminder that before you can really understand other people you must first recognize that their worlds are fundamentally different from your own

Rebuilt Michael Chorost, 2006-05-19 After Michael Chorost suddenly lost what was left of his hearing he took the radical step of having a cochlear implant a tiny computer installed in his head A technological marvel the device not only restored to him the world of sound but also could be routinely upgraded with new software Despite his initial fear of the technology s potentially dehumanizing effects Chorost s implant allowed him to connect with others in surprising ways as a cyborg he learned about love joined a writing group and formed deeper friendships More profoundly his perception of the world around him was dramatically altered Brimming with insight and written with charm and self deprecating humor Rebuilt unveils in personal terms the astounding possibilities of a new technological age

Philosophy of Emerging Media Juliet Floyd, James Everett Katz, 2016 The term emerging media responds to the big data now available as a result of the larger role digital media play in everyday life as well as the notion of emergence that has grown across the architecture of science and technology over the last two decades with increasing imbrication The permeation of everyday life by emerging media is evident ubiquitous and destined to accelerate No longer

are images institutions social networks thoughts acts of communication emotions and speech the media by means of which we express ourselves in daily life linked to clearly demarcated stable entities and contexts Instead the loci of meaning within which these occur shift and evolve quickly emerging in far reaching ways we are only beginning to learn and bring about This volume s purpose is to develop broaden and spark future philosophical discussion of emerging media and their ways of shaping and reshaping the habitus within which everyday lives are to be understood Drawing from the history of philosophy ideas of influential thinkers in the past intellectual path makers on the contemporary scene offer new philosophical perspectives laying the groundwork for future work in philosophy and in media studies On diverse topics such as identity agency reality mentality time aesthetics representation consciousness materiality emergence and human nature the questions addressed here consider the extent to which philosophy should or should not take us to be facing a fundamental transformation

The Animal Who Writes Marilyn M. Cooper,2019-02-15 Writing begins with unconscious feelings of something that insistently demands to be responded to acted upon or elaborated into a new entity Writers make things that matter treaties new species software and letters to the editor as they interact with other humans of all kinds As they write they also continually remake themselves In *The Animal Who Writes* Cooper considers writing as a social practice and as an embodied behavior that is particularly important to human animals The author argues that writing is an act of composing enmeshed in nature cultures and is homologous with technology as a mode of making

Musicophilia Oliver Sacks,2010-02-05 What goes on in human beings when they make or listen to music What is it about music what gives it such peculiar power over us power delectable and beneficent for the most part but also capable of uncontrollable and sometimes destructive force Music has no concepts it lacks images it has no power of representation it has no relation to the world And yet it is evident in all of us we tap our feet we keep time hum sing conduct music mirror the melodic contours and feelings of what we hear in our movements and expressions In this book Oliver Sacks explores the power music wields over us a power that sometimes we control and at other times don t He explores in his inimitable fashion how it can provide access to otherwise unreachable emotional states how it can revivify neurological avenues that have been frozen evoke memories of earlier lost events or states or bring those with neurological disorders back to a time when the world was much richer This is a book that explores like no other the myriad dimensions of our experience of and with music

Here Be Dragons Olle Häggström,2016-01-22 There is a widely held conception that

progress in science and technology is our salvation and the more of it the better. This however is an oversimplified and even dangerous attitude. While the future will certainly offer huge changes due to such progress it is far from certain that all of these changes will be for the better. The unprecedented rate of technological development that the 20th century witnessed has made our lives today vastly different from those in 1900. No slowdown is in sight and the 21st century will most likely see even more revolutionary changes than the 20th due to advances in science, technology and medicine. Particular areas where extraordinary and perhaps disruptive advances can be expected include biotechnology, nanotechnology and machine intelligence. We may also look forward various ways to enhance human cognitive and other abilities using e.g. pharmaceuticals, genetic engineering or machine brain interfaces perhaps to the extent of changing human nature beyond what we currently think of as human and into a posthuman era. The potential benefits of all these technologies are enormous but so are the risks including the possibility of human extinction. This book is a passionate plea for doing our best to map the territories ahead of us and for acting with foresight so as to maximize our chances of reaping the benefits of the new technologies while avoiding the dangers.

Battleground: Science and Technology Peter H. Denton, Sal Restivo, 2008-10-30

The modern world is filled with debate and controversy and science and technology the most characteristic features of the modern world are not immune. Science and technology are implicated in many if not all of the issues, troubles and problems students are likely to come across in their classes and in their everyday lives. Science and technology serve as a primary pathway to understanding front page headlines on everything from war to AIDS and from oil exploration to global warming. *Battleground: Science and Technology* examines the most hot button issues involving science and technology and provides a balanced assessment of the arguments on all sides of the often strident debates. The approximately 100 issues examined in *Battleground: Science and Technology* include topics in the brain sciences including the controversies over the cause of autism and the reliability of memory as well as the debates over parapsychology, debates surrounding information technology such as only privacy, the impact of video games on social behavior and the advent of virtual reality, the complexity over drugs and medications such as the testing of the efficacy of medications, the war on recreational drugs and the costs of pharmaceutical research and hot button topics that are constantly in the news such as evolution and creationism, DNA testing, stem cell research and genetically modified organisms. Each entry provides a list of accessible resources useful for further research.
