Recent Advances In Geomathematics:

Recent Advances in Geomathematics 550.0151 MER. D. F. Merriam, *Recent Advances in geomathematics* Daniel Francis Merriam, 1978 Handbook of Mathematical Geosciences B.S. Daya Sagar, Qiuming Cheng, Frits Agterberg, 2018-06-25 This Open Access handbook published at the IAMG's 50th anniversary presents a compilation of invited path breaking research contributions by award winning geoscientists who have been instrumental in shaping the IAMG. It contains 45 chapters that are categorized broadly into five parts: i theory ii general applications iii exploration and resource estimation iv reviews and v reminiscences covering related topics like mathematical geosciences mathematical morphology geostatistics fractals and multifractals spatial statistics multipoint geostatistics compositional data analysis informatics geocomputation numerical methods and chaos theory in the geosciences **Geomathematical and Petrophysical Studies in Sedimentology** Dan Gill, Daniel F Merriam, 2015-12-04 *Computers Geology Volume 3* Geomathematical and Petrophysical Studies in Sedimentology presents a collection of papers concerned with interpretation of sediment properties from mechanical logs and seismic profiles. This book covers stimulation of groundwater flow atmospheric conditions bed thickness and stratigraphic data. Organized into 17 chapters, this volume begins with an overview of the FORTRAN program designed to duplicate and simplify the mental processes that lead to an interpretation of a depositional setting. This text then examines a simple stochastic sedimentation model of turbidite sequences that assumes a bed thickness corresponding to a waiting time between turbidity currents. Other chapters consider the study of a system's response to different disturbances. This book discusses as well the Monte Carlo model to reconstruct open array correlation matrices from coefficients drawn from closed percent systems. The final chapter deals with bivariate allometric equation. This book is a valuable resource for petroleum geologists and research workers Handbook of Geomathematics Willi Freeden, M. Zuhair Nashed, Thomas Sonar, 2010-08-13 During the last three decades geosciences and geo engineering were influenced by two essential scenarios. First the technological progress has changed completely the observational and measurement techniques. Modern high speed computers and satellite based techniques are entering more and more all geodisciplines. Second there is a growing public concern about the future of our planet its climate its environment and about an expected shortage of natural resources. Obviously both aspects viz efficient strategies of protection against threats of a changing Earth and the exceptional situation of getting terrestrial airborne as well as spaceborne data of better and better quality explain the strong need of new mathematical structures tools and methods. Mathematics concerned with geoscientific problems i.e Geomathematics is becoming increasingly important. The Handbook Geomathematics as a central reference work in this area comprises the following scientific fields: I observational and measurement key technologies II modelling of the system Earth geosphere cryosphere hydrosphere atmosphere biosphere III analytic algebraic and operator theoretic methods IV statistical and stochastic methods V computational and numerical analysis methods VI historical background and

future perspectives Microcomputer Applications in Geology 2 J.T. Hanley,D.F. Merriam,2013-10-22 The development and utilization of microcomputers is widespread and rapid in all scientific disciplines geology being no exception Microcomputers are becoming ubiquitous and indispensable in research and teaching as well as in the commercial sector The applications that are available to the geologic community today are increasingly dynamic and sophisticated although to date software has been the limiting factor This volume provides an excellent source of software and ideas on applications Papers cover a wide range of subjects both in geology and computer science The applications range from reconstructing fossil shells to reconstructing landscape terrains covering topics such as expert systems simulations database construction and data analysis and display **Geographic Information Systems for Geoscientists** Graeme F. Bonham-Carter,2014-05-18

Geographic Information Systems for Geoscientists Modelling with GIS provides an introduction to the ideas and practice of GIS to students and professionals from a variety of geoscience backgrounds The emphasis in the book is to show how spatial data from various sources principally paper maps digital images and tabular data from point samples can be captured in a GIS database manipulated and transformed to extract particular features in the data and combined together to produce new derived maps that are useful for decision making and for understanding spatial interrelationship The book begins by defining the meaning purpose and functions of GIS It then illustrates a typical GIS application Subsequent chapters discuss methods for organizing spatial data in a GIS data input and data visualization transformation of spatial data from one data structure to another and the combination analysis and modeling of maps in both raster and vector formats This book is intended as both a textbook for a course on GIS and also for those professional geoscientists who wish to understand something about the subject Readers with a mathematical bent will get more out of the later chapters but relatively non numerate individuals will understand the general purpose and approach and will be able to apply methods of map modeling to clearly defined problems

Geographical Information Systems Theory, Applications and Management Cédric Grueau,Robert Laurini,Lemonia Ragia,2021-05-17 This book constitutes selected revised and extended papers of the 6th International Conference on Geographical Information Systems Theory Applications and Management GISTAM 2020 held in Prague Czech Republic May 2020 Due to the COVID 19 pandemic the conference was held online The 9 revised full papers presented were carefully reviewed and selected from 62 submissions The papers are centered on urban and regional planning water information systems geospatial information and technologies spatio temporal database management decision support systems energy information systems GPS and location detection **Interpretation of Geophysical Fields in Complicated Environments**

B.E. Khesin,V.G. Alexeyev,Lev Eppelbaum,2013-04-17 Books published during recent years in the field of applied geo physics can be in general divided into two main types The first type covers such multiaspect books as Introduction to Geophysics while the second special works on fundamental theoretical problems with an elaborate mathematical description The books of the first type are mainly intended for beginner students and specialists in adjacent fields The books of the second type may

be useful for teachers and theorists However there are also books of another third type These books describe the experience in geophysical investigation under specific conditions or propose solutions to concrete geological problems being a methodological guide for geophysicists and concentrating ideas both for advanced students and researchers Authors hope to give the readers a book of this kind Interpretation of geophysical fields is a complex consistent process Its successful realization requires a knowledge of geological regularities and geological situation b availability of petrophysical support c mathematical methods of solving direct and inverse problems of geophysics i e computation of geophysical fields from a known source and determination of source characteristics from known fields d application of statistical and logical informational procedures to the analysis and synthesis of observation results for revealing desired objects and peculiarities of the geological structure

Computer Applications in Resource Estimation G. Gaal,D.F. Merriam,2013-10-22 Quantitative resource assessment methods play an increasing role in exploration for petroleum water and minerals This volume presents an international review on the state of the art of the computerized methodology in resource exploration The papers taken from those presented at the symposium are classified to either techniques i e trend analysis classification techniques geostatistics image analysis expert systems artificial intelligence inventories tomography and others or to resources i e petroleum water metals and non metals

Mechanisms of Deformation and Fracture K. E. Easterling, 2013-10-22 Mechanisms of Deformation and Fracture contains the proceedings of the Interdisciplinary Conference on the Mechanisms of Deformation and Fracture held at the University of Lule in Sweden on September 20-22, 1978. The papers explore the mechanisms underlying deformation and fracture of materials such as pearlite, metals, quartz, soils, and rocks. Results of theoretical and experimental studies on topics ranging from electromagnetic detection of low cycle fatigue to stress and strain distribution in two phase systems are presented. This book is comprised of 37 chapters and begins with a discussion on the interrelationships among solid mechanics, earth sciences, and material sciences. Subsequent chapters focus on the low cycle behavior of case hardened steel, deformation and shear of normally consolidated flocculated kaolin, analytical modeling in inelasticity, creep mechanisms in clay, and initiation of crack growth at full plasticity. Plastic flow mechanisms and the rheological properties of the Earth's mantle are also examined along with the fracture of glassy thermoplastics. The final chapter presents a thermodynamic model of consolidation in cohesive soils. This monograph will be a valuable resource for students and practitioners of mechanical engineering, metallurgy, materials science, and earth sciences.

Predictive Geology Ghislain De Marsily, Daniel F Merriam, 2013-10-22 Predictive Geology With Emphasis on Nuclear Waste Disposal covers the proceedings of papers presented at sessions sponsored by the International Association for Mathematical Geology. The topics that this book tackles are issues relevant to nuclear waste disposal. The first chapter discusses the use of plate tectonics as a catastrophe theoretic model and the second chapter covers geologic predictions and radioactive waste disposal. Chapter 3 also talks about radioactive waste disposal with emphasis on the application of predictive geology. Chapter 4 discusses salt domes and Chapter 5 tackles the use of fault tree analysis for probabilistic assessment of radioactive waste segregation. The sixth chapter covers predictive geology in nuclear waste management while the seventh chapter tackles nuclear power on unstable ground. The eighth chapter deals with long term thermohydrologic behavior of nuclear waste repositories. Chapter 9 discusses the influence of faulting on groundwater flow and contaminant transport while chapter 10 covers the influence of microfissures in crystalline rock on radionuclide migration. The eleventh chapter tackles the long term prediction of the fate of nuclear waste deeply buried in granite and the twelfth chapter talks about the use of quantitative evaluation of the contribution of geologic knowledge in exploration for petroleum. The last chapter deals with resource estimation models and predicted discovery. Researchers and professionals concerned with the effects of radioactive materials to the environment will find this book a great source of information.
