Kaufman, 2009-08-15 Plant biotechnology applies to three major areas of plants and their uses 1 control of plant growth and development 2 protection of plants against biotic and abiotic stresses and 3 expansion of ways by which specialty foods biochemicals and pharmaceuticals are produced The topic of recent advances in plant biotechnology is ripe for consideration because of the rapid developments in this eld that have revolutionized our concepts of sustainable food production cost effective alt native energy strategies environmental bioremediation and production of pla derived medicines through plant cell biotechnology Many of the more traditional approaches to plant biotechnology are woefully out of date and even obsolete

Fresh approaches are therefore required To this end we have brought together a group of contributors who address the most recent advances in plant biotechnology and what they mean for human progress and hopefully a more sustainable future Achievements today in plant biotechnology have already surpassed all previous expectations These are based on promising accomplishments in the last several decades and the fact that plant biotechnology has emerged as an exciting area of research by creating unprecedented opportunities for the manipulation of biological systems In connection with its recent advances plant biotechnology now allows for the transfer of a greater variety of genetic information in a more precise controlled manner The potential for improving plant productivity and its proper use in agriculture relies largely on newly developed DNA biotechnology and molecular markers

Recent Advances in Understanding Plant Hormone Transporters Markus Geisler, 2020-04-24 Since the first postulation of auxin function by the Darwins many other plant hormones have been identified and most of them have been found to be synthesized at different sites from their places of action Hormone transport and thus the responsible hormone transporters are therefore essential for a precise regulation of plant hormone action which has been repeatedly supported by severe developmental and physiological phenotypes reported for hormone transporter loss of function mutants Plant transporters have been shown to be involved in short and long distance transport of hormones Short distance transport between cells seems to be sufficient for a local hormone action in some tissues such as seeds which seem to require exporter and importer proteins in adjacent cells as shown for example for abscisic acid During long distance transport with the transpiration stream or in the phloem demonstrated for many but not all plant hormones including auxins abscisic acid cytokinins gibberelins strigolactones and salicylic acid transporters are thought to function in loading and unloading processes Similarly in cases where long distance transport is achieved by cell to cell transport such as for auxins the highly coordinated action of import and export transporters at the contact surfaces of neighboring cells is apparently needed however all these processes are far from being understood on the molecular level Currently it appears

that many hormones are transported by members of distinct transporter classes ranging from primary active pumps that couple hormone translocation to direct ATP hydrolysis antiporters and symporters that use the proton motive force to create hormone concentration gradients and to facilitators Among those the ATP binding cassette ABC family and the Nitrate transport1 Peptide transporter family NPF seem to be dominant but currently it is unclear how individual transporters cooperate to achieve a systemic level of transport Furthermore in most cases several pairs of importers and exporters are required but how these are correctly allocated in order to guarantee the function of a complex hormonal network is unknown While remarkable progress has been made on hormone transporter regulation on the transcription and post transcriptional level for transporters involved in long distance transport such as auxin regulation of transporter trafficking stability and activity is less understood for other hormones
