Anti-Cancer Chemotherapy David Khayat, Gabriel N. Hortobagyi, 2013-11-27 This is the fourth volume of our series Progress in Anti cancer Therapy For the past four years we have taken the challenge to select each year some of the most interesting topics on the wide field of oncology As usual this volume continues the tradition and covers five cancers breast prostate bladder lymphoma and ovarian the role of HIV and HTLV in cancer as well as some developmental pharmacology and behavioral issues This year we have particularly focused our attention on one of the most common although rarely addressed cancer accounting for more than 315 000 newly diagnosed cases and 41 000 cancer related deaths annually Landis SH et al 1999 prostate cancer Five chapters address some of the issues concerning this disease The chapter by Schroder describes the hopes and pitfalls of early detection of prostate cancer It reviews the literature on screening studies that have been performed both in the US and in Europe These studies suggest that cancer mortality could be reduced by screening for prostate cancer mostly through PSA testing However the effectiveness of early detection still needs to be definitely confirmed and ongoing randomized studies are described the results of which will probably help the medical community determine

the worth of PSA based screening for prostate cancer On the same hand the paper from von Eschenbach is reviewing the clinical problems that are related this disease *Microbiome and Cancer* Erle S. Robertson, 2019-02-20 This book ventures into a new and exciting area of discovery that directly ties our current knowledge of cancer to the discovery of microorganisms associated with different types of cancers Recent studies demonstrate that microorganisms are directly linked to the establishment of cancers and that they can also contribute to the initiation as well as persistence of the cancers *Microbiome and Cancer* covers the current knowledge of microbiome and its association with human cancers It provides important reading for novices senior undergraduates in cancer and microbiology graduate students junior investigators residents fellows and established investigators in the fields of cancer and microbiology We cover areas related to known broad concepts in microbiology and how they can relate to the ongoing discoveries of the micro environment and the changes in the metabolic and physiologic states in that micro environment which are important for the ongoing nurturing and survival of the poly microbial content that dictates activities in that micro environment We cover the interactions of microorganisms associated with gastric carcinomas which are important for driving this particular cancer Additional areas include oral cancers skin cancers ovarian cancers breast cancers nasopharyngeal cancers lung cancers mesotheliomas Hodgkin s and non Hodgkin s lymphomas glioblastoma multiforme hepatocellular carcinomas as well as the inflammatory response related to the infectious agents in cancers This book covers the metabolic changes that occur because of infection and their support for development of cancers chronic infection and development of therapeutic strategies for detection and control of the infection The field of microbiome research has exploded over the last five years and we are now understanding more and more about the context in which microorganisms can contribute to the onset of cancers in humans The field of microbiome research has demonstrated that the human body has specific biomes for tissues and that changes in these biomes at the specific organ sites can result in disease These changes can result in dramatic differences in metabolic shifts that together with genetic mutations will produce the perfect niche for establishment of the particular infection programmes in that organ site We are just beginning to understand what those changes are and how they influence the disease state Overall we hope to bring together the varying degrees of fluctuations in the microbiome at the major organ sites and how these changes affect the normal cellular processes because of dysregulation leading to proliferation of the associated tissues
