Dhawan, H. K.

Huang, Dae-Shik Kim, 2008 Computerized medical imaging and image analysis have been the central focus in diagnostic radiology. They provide revolutionizing tools for visualization of physiology as well as the understanding and quantitative measurement of physiological parameters. This book provides a unique depth of knowledge from the principles to recent advanced methods in medical imaging instrumentation and techniques as well as multidimensional image analysis and classification methods for research education and applications in computer aided diagnostic radiology. Internationally renowned researchers and experts in their respective areas provide detailed description of the basic foundation as well as the most recent developments in medical imaging. This book helps readers to understand theoretical and advanced concepts for important research and clinical applications. **Recent Advances in Diagnostic Neuroradiology** Ph.

Demaerel, 2013-12-20 Diagnostic neuroradiology is undergoing such rapid change that standard texts are quickly becoming outdated in important respects. **Recent Advances in Diagnostic Neuroradiology** is designed to complement the general textbooks of neuroradiology by documenting and discussing the progress that has been achieved. Following six introductory chapters 26 important topics in brain and spinal imaging are discussed in detail with appropriate illustrations and a review of the most recent literature. Each of these topics has specifically been chosen in order to summarize recent developments and to document the state of the art in the field. This book written by acknowledged experts in the field will be of relevance and importance to all with an interest in neuroradiology. **Recent Advances in Diagnosis and Treatment of Brain Tumors: From Pediatrics to Adults** John Bianco, Dimitrios N. Kanakis, Cesare Zoia, Archya Dasgupta, Majaz Moonis, 2025-06-12 In the last few years an impressive development has been achieved in the arena of new diagnostic and therapeutic approaches for brain tumors both in children and adults. This has in turn led to the recognition of new tumour entities as well as to better categorization of the existing ones. The recent WHO classification of the CNS tumors 2021 has been entirely revised and the term integrated diagnosis has been since then applied which refers to a combination of the classical histopathological diagnosis with the accompanying molecular results of some of the most common tumors. In addition a lot of progress has been made in the field of imaging with the invention of more accurate methods and the improvement of previously established diagnostic modalities. As a result of the aforementioned achievements in the diagnosis of brain tumors new treatment options have been introduced which respond more successfully to the handling of the several tumor entities. Due to the immense progress not only in the field of diagnosis but also in the treatment of brain tumors it is of utmost importance to present the newly identified biomarkers and innovative techniques which allow on the one hand a more accurate diagnosis and on the other hand a more precise therapeutic intervention. Since a lot of research is conducted at present with this

regard the result of these investigations should be shared with the broader research community in order to improve thereafter both the available diagnostic methods in the fields of histopathology and imaging and the therapeutic techniques in the areas of neurosurgery and chemo radiotherapy Undoubtfully this will contribute substantially in the accomplishment of the target of personalized medicine in the public The current Research Topic aims to bring together new discoveries in the diagnosis and therapy of pediatric and adult brain tumors In this context there is an open invitation to all the researchers and clinicians who are involved in this area to participate actively by contributing their valuable results and experiences with research focused on primary brain tumors Moving towards our actual goal as medical society which is not other than the implementation of personalized medicine our actual topic could be of particular value in the accomplishment of some of its fundamentals namely i precise diagnosis ii personalized intervention iii patient s participation iv prediction and prevention of the disease and v supportive care neurorehabilitation Manuscripts that are primarily in silico bioinformatics based including prognostic algorithms using large databases and do not have sufficient validation in an independent cohort of patients from one or more institutions rather than using another database and or functional validation in at least two acceptable tumor cell lines in vitro in vivo will not be considered

Recent Advances in Arthroplasty Samo Fokter, 2012-01-27 The purpose of this book was to offer an overview of recent insights into the current state of arthroplasty The tremendous long term success of Sir Charnley s total hip arthroplasty has encouraged many researchers to treat pain improve function and create solutions for higher quality of life Indeed and as described in a special chapter of this book arthroplasty is an emerging field in the joints of upper extremity and spine However there are inborn complications in any foreign design brought to the human body First in the chapter on infections we endeavor to provide a comprehensive up to date analysis and description of the management of this difficult problem Second the immune system is faced with a strange material coming in huge amounts of micro particles from the tribology code Therefore great attention to the problem of aseptic loosening has been addressed in special chapters on loosening and on materials currently available for arthroplasty
