Ellis,Andrew W. Young,2017-07-14 Cognitive neuropsychology seeks to understand impairments of specific cognitive functions in relation to a model of normal cognitive processing The conclusions drawn from the study of abnormal processes are in turn used in the development and testing of theories of normal cognition First published in 1988 this seminal book represented an attempt to synthesize and systematize progress in the study of cognitive neuropsychology and therefore provides an important snapshot of the field at the time In addition to reviewing different forms of impairment and discussing their implications for theories of normal function this book also examines the empirical and theoretical foundations of the subject including the use of single case studies and the assumptions that must be made about the mind and brain This classic edition marks 25 years in print and includes a brand new introduction written by the authors Ellis and Young The Augmented Edition of Human Cognitive Neuropsychology published in 1997 is also still available This classic edition will be important reading for students of cognitive psychology cognitive neuroscience and neuropsychology      *Human Cognitive Neuropsychology* Andrew W. What's New puts innovation firmly back on the agenda of archaeological interpretation. This book revives interest in the process of innovation and reinterprets it by drawing on original work done in a variety of disciplines. It demonstrates that the study of the components of innovation, invention, acceptance, and the context in which they occur is essential if social change is to be better understood. The book contains detailed case studies that cover a broad geographical range in the prehistoric, historic, and modern world. It simulates and analyses the conditions of innovation and provides the necessary theoretical framework. The technologies involved are diverse: herding, fishing, pottery making, metalworking, and land management. Several important issues emerge from this diversity: it is the context of innovation that determines whether change will take place within hierarchical societies; ideology can both stimulate and deny innovation; and the potential for innovation, experimentation, and change in traditional societies is systematically underrated by the Western world, which is dominated by a narrow technological perspective. The contributors also study innovation in social and applied anthropology, industrial planning, and the natural sciences. What's New will provoke renewed discussion throughout the archaeological community about the process of innovation. Anthropologists, human geographers, and other social scientists will find it fascinating because it provides a time dimension for the study of the conditions of human and social change.

Multinational Corporations In Political Environments: Ethics, Values And Strategies Usha C V Haley, 2001-11-12

Multinational Corporations in Political Environments advances and tests a theory of why foreign corporations leave host states. Theories of international business have often ignored the complexity of corporate decisions about leaving foreign countries, generally assuming that the economic and competitive reasons that prompt multinational corporations to enter host states also explain their subsequent reasons for leaving. Alternatively, this book proposes a theory of how different stakeholders' values and ethics shape multinationals' strategic leaving behaviors. Tested in South Africa when US multinationals were facing diverse pressures from stockholders, governments, and consumers to leave, the research provides a prism to isolate how different stakeholders' actions influenced multinationals' behaviors. Detailed analyses of subsidiary-level archival data over a period of four crucial years revealed that the multinationals engaged in diverse forms of leaving, reflecting their involvements, strategies, and stakeholders' influences. The research is the first to test which stakeholders' strategies, including boycotts and sanctions, influenced multinationals and which did not, and to identify their effects on multinationals' behaviors. This has enormous implications for policy makers, managers, and social activists. The book also applies the findings and explores implications for recent stakeholders' attempts at influencing multinationals and governments, such as Nike in Asia and the Burmese government through sanctions, resolutions, and boycotts.
