q-series with Applications to Combinatorics, Number Theory, and Physics Bruce C. Berndt, Ken Ono, 2001 The subject of q series can be said to begin with Euler and his pentagonal number theorem In fact q series are sometimes called Eulerian series Contributions were made by Gauss Jacobi and Cauchy but the first attempt at a systematic development especially from the point of view of studying series with the products in the summands was made by E Heine in 1847 In the latter part of the nineteenth and in the early part of the twentieth centuries two English mathematicians L J Rogers and F H Jackson made fundamental contributions In 1940 G H Hardy described what we now call Ramanujan s famous $1 \text{ psi } 1$ summation theorem as a remarkable formula with many parameters This is now one of the fundamental theorems of the subject Despite humble beginnings the subject of q series has flourished in the past three decades particularly with its applications to combinatorics number theory and physics During the year 2000 the University of Illinois embraced The Millennial Year in Number Theory One of the events that year was the conference q Series with Applications to Combinatorics Number Theory and Physics This event gathered mathematicians from the world over to lecture and discuss their research This volume presents nineteen of the papers presented at the conference The excellent lectures that are included chart pathways into the

future and survey the numerous applications of q series to combinatorics number theory and physics **Blender**

Multichannel Optical Networks Peng-Jun Wan, 2000-09-30 The huge bandwidth of optical fiber was recognized back in the 1970s during the early development of fiber optics technology For the last two decades the capacity of experimental and deployed systems has been increasing at a rate of 100 fold each decade a rate exceeding the increase of integrated circuit speeds Today optical communication in the public communication networks has developed from the status of a curiosity into being the dominant

technology Various great challenges arising from the deployment of wavelength division multiplexing WDM have attracted much effort from many researchers Indeed optical networking has been a fertile ground for both theoretical research and experimental studies This monograph presents contributions from the author s past and ongoing research in the field of optical networking The ideas presented focus more on graph theoretical and algorithmic aspects of optical networks Although this book is limited to the author s own research there are many outstanding achievements made by other individuals which are cited throughout Without the inspiration of their efforts this monograph would never have been possible Audience Research workers and professionals from mathematics computer science and engineering with an interest in algorithms graph theory telecommunications networking and optical devices

Historical Instructional

Design Cases Elizabeth Boling,Colin M. Gray,Craig D. Howard,John Baaki,2020-11-26 Historical Instructional Design Cases presents a collection of design cases which are historical precedents for the field with utility for practicing designers and implications for contemporary design and delivery Featuring concrete and detailed views of instructional design materials

programs and environments this book's unique curatorial approach situates these cases in the field's broader timeline while facilitating readings from a variety of perspectives and stages of design work. Students, faculty, and researchers will be prepared to build their lexicon of observed designs, understand the real-world outcomes of theory application, and develop cases that are fully accessible to future generations and contexts. *Combinatorics, Algorithms, Probabilistic and Experimental Methodologies* Bo Chen, 2007-09-28. The First International Symposium on Combinatorics, Algorithms, Probabilistic and Experimental Methodologies was held in Hangzhou, China, in April 2007. The symposium provided an interdisciplinary forum for researchers to share their discoveries and approaches, search for ideas, methodologies, and tool boxes, find better, faster, and more accurate solutions, and develop a research agenda of common interest. This volume constitutes the refereed post-proceedings of the symposium. Inside you'll find 46 full papers. They represent some of the most important thinking and advancements in the field. The papers address large data processing problems using different methodologies from major disciplines such as computer science, combinatorics, and statistics.
