conjugate to a subgroup of the finite group A counterexample to the conjecture of Zassenhaus that group basis are rationally conjugate is presented in the semilocal situation Scott Roggenkamp To this end an extended version of Clifford theory for p adic integral group rings is presented Moreover several examples are given to demonstrate the complexity of the isomorphism problem The second part of the book is concerned with various aspects of the structure of rings of integers as Galois modules It begins with a brief overview of major results in the area thereafter the majority of the text focuses on the use of the theory of Hopf algebras It begins with a thorough and detailed treatment of the required foundational material and concludes with new and interesting applications to cyclotomic theory and to elliptic curves with complex multiplication
