Leaves of Healing, 1929 *Worlds without End* Mary-Jane Rubenstein, 2014-01-28 A religion professor elucidates the theory of the multiverse its history and its reception in science philosophy religion and literature Multiverse cosmologies imagine our universe as just one of a vast number of others Beginning with ancient Atomist and Stoic philosophies Mary Jane Rubenstein links contemporary models of the multiverse to their forerunners and explores the reasons for their recent appearance One concerns the so called fine tuning of the universe nature s constants are so delicately calibrated that it seems they have been set just right to allow life to emerge For some thinkers these fine tunings are evidence of the existence of God for others however and for most physicists God is an insufficient scientific explanation Hence the multiverse s allure if all possible worlds exist somewhere then like monkeys hammering out Shakespeare one universe is bound to be suitable for life Of course this hypothesis replaces God with an equally baffling article of faith the existence of universes beyond before or after our own eternally generated yet forever inaccessible to observation or experiment In their very efforts to sidestep metaphysics theoretical physicists propose multiverse scenarios that collide with it and even produce counter theological narratives Far from invalidating multiverse hypotheses Rubenstein argues this interdisciplinary collision actually secures their scientific viability We may therefore be witnessing a radical reconfiguration of physics philosophy and religion in the modern turn to the multiverse Rubenstein s witty thought provoking history of philosophy and physics leaves one in awe of just how close Thomas Aquinas and American physicist Steven Weinberg are in spirit as they seek ultimate answers Publishers Weekly A fun mind stretching read clear and enlightening San Francisco Book Review
