Geomorphology in Deserts Ronald U. Cooke,Andrew Warren,2023-11-15 This book examines the landforms soils and geomorphological processes of deserts which cover over 20% of Earth s land surface Despite their vastness and the significant body of literature on the topic deserts remain underrepresented in comprehensive geomorphological surveys with notable exceptions like Walther s *Das Gesetz der Wiistenbildung* 1924 Cotton s *Climatic Accidents in Landscape Making* 1942 and Tricart and Cailleux s *Le Model des R gions S ches* 1961 Our study builds on these works incorporating our field experiences in deserts across North America South America North Africa and Pakistan while primarily drawing on English language research and emphasizing contemporary geomorphological systems at different scales By focusing on present processes shaping landforms and soils we have given less attention to regional chronologies of landform development a consequence of our selective approach The field of desert geomorphology still grapples with speculative theories such as parallel slope retreat and pervasive wind erosion which often overshadow empirical evidence We aim to provide grounded generalizations clarify contested ideas and pose meaningful questions to establish a baseline for future research hoping to contribute to a deeper understanding of the dynamic processes shaping desert landscapes This title is part of UC Press s Voices Revived program which commemorates University of California Press s mission to seek out and cultivate the brightest minds and give them voice reach and impact Drawing on a backlist dating to 1893 Voices Revived makes high quality peer reviewed scholarship accessible once again using print on demand technology This title was originally published in 1973
