Cody, 2005-06-27 The export of American architecture began in the nineteenth century as a disjointed set of personal adventures and commercial initiatives It continues today alongside the transfer of other aspects of American life and culture to most regions of the world Jeffrey Cody explains how why and where American architects planners building contractors and other actors have marketed American architecture overseas In so doing he provides a historical perspective on the diffusion of American building technologies architectural standards construction methods and planning paradigms Using previously undocumented examples and illustrations he shows how steel frame manufacturers shipped their products abroad enabling the erection of American style skyscrapers worldwide by 1900 and how this phase was followed by similar initiatives by companies manufacturing concrete components      **The Rise of an American Architecture, 1815-1915** Metropolitan Museum of Art (New York, N.Y.), 1970      *Architecture* Henry-Russell Hitchcock, 1987-01-01 This book examines a period which is far more than a prelude to the age of steel and concrete The first half century culminated in the bold iron and glass of the Crystal Palace There follows the creation of the modern styles of the era based on traditions of the past and finally in the 20th century Art Nouveau and the modern architects in their generations

Perret Wright Gropius Corbusier Mies van der Rohe and others in many parts of the world      Architecture Martin van der Linden, 2021-03-12 The question of what architecture is answered in this book with one sentence Architecture is space created for human activities The basic need to find food and water places these activities within a larger spatial field Humans have learned and found ways to adjust to the various contextual difficulties that they faced as they roamed the earth Thus rather than adapting humans have always tried to change the context to their activities Humanity has looked at the context not merely as a limitation but rather as a spatial situation filled with opportunities that allows through intellectual interaction to change these limitations Thus humanity has created within the world their own contextual bubble that firmly stands against the larger context it is set in The key notion of the book is that architecture is space carved out of and against the context and that this process is deterministic      **American Architect and Architecture** , 1899      **History of Architectural Theory** Hanno-Walter Kruft, 1994 As the first comprehensive encyclopedic survey of Western architectural theory from Vitruvius to the present this book is an essential resource for architects students teachers historians and theorists Using only original sources Kruft has undertaken the monumental task of researching organizing and analyzing the significant statements put forth by architectural theorists over the last two thousand years The result is a text that is authoritative and complete easy to read without being reductive      **Source Book of American Architecture** George Everard Kidder Smith, 1996 This survey provides a unique overview of 1 000 years of architectural development      Gotham Edwin G.
