Rise Of The Luftwaffe 1918 1940:

The Rise of the Luftwaffe, 1918-1940 Herbert Molloy Mason, 1973 **The Rise of the Luftwaffe, 1918-1940** Herbert Mason, 2016-11-08 The campaign in Poland proved the Luftwaffe to be the Wehrmacht's loudest trumpet. The rest of the world was stunned at the overrunning of sixty thousand miles of courageously defended terrain in only twenty six days. In the winter of 1918 Germany's conquerors set about rendering the Reich forever incapable of waging war. The existing German Air Service of nearly 15 000 planes was to be scrapped; the treaty of Versailles would ensure that no military aircraft would ever be flown in Germany again. But less than a generation later Europe shook before the threat of the Luftwaffe believed to be the most powerful air force in the world. The Rise of the Luftwaffe tells how it happened. Denied warplane factories and flying schools in their homeland the Germans built them in Russia and it was there that they trained an elite pilot corps. At home state sponsored gliding schemes gave a new generation of pilots their first taste of the air and clandestine factories ostensibly making perambulators or washing machines turned out warplanes. As confidence grew and the actual restrictions on German aviation eased so a new dimension was added to the bluff. Germany's re-occupation of the Rhineland was carried out under cover of planes lacking guns and ammunition; the Luftwaffe's apparent capability was exaggerated by the use of stripped down versions of fighters in speed record attempts. Now instead of concealing the existence of their air power from the rest of Europe the Germans were concealing its limitations. Herbert Molloy Mason charts every step of the subterfuge and ingenuity by which the transformation was brought about. He describes the pioneering of new developments such as the Stuka dive bomber and the proving of this secretly trained and created air force first in the Spanish Civil War and later against Poland and France. At the same time he explodes some of the myths of German technical and organizational superiority: meddling by Hitler, bickering between designers and bureaucrats and ineptitude by the morphine addicted Goering cost the Luftwaffe a war winning strategic bomber force and jet fighters even before World War II began. Praise for Herbert Molloy Mason. Worth taking seriously. Earl F Ziemke. Herbert Molloy Mason 1927-2013 was a noted writer of military history and wrote sixteen books including *The Lafayette Escadrille* and *To Kill Hitler*. He lived in San Antonio Texas with his wife who was an artist. *The Beginnings of Strategic Air Power* Neville Jones, 2012-11-12 Using official records the author traces the origins and early development of strategic bombing and examines its organs in the operations and staff planning of the First World War. The experiences of the First World War should have been a valuable legacy to those who devised the counter offensive strategy in the years between the war. Unfortunately the lessons learnt were soon forgotten and many of the operational and technical problems which the planners had begun to tackle in 1918 were not even seen to exist by the Air Staff during the 1920s and early 1930s. **The Spanish Military and Warfare from 1899 to the Civil War** José Vicente Herrero Pérez, 2017-09-14 This book explores the attitudes of the Spanish army officer corps towards the evolution of warfare during the early decades of the twentieth century and their influence on the armies of the Spanish Civil War. It examines how

the Spanish military coped with technological innovations such as the machine gun and the tank how it adapted the army's battlefield doctrine to changes in warfare before the Civil War and the influence of this doctrine on the outcome of the conflict Of the different armed forces that fought in the Spanish Civil War it is paradoxically the Spanish army that remains most forgotten especially its military doctrine Scholarship on the Spanish military in this period focuses on its politics ideology and institutional reforms touching upon hard professional issues only superficially if at all Based on original research and using largely unstudied Spanish primary sources this book fills a major scholarly gap in the history of the Spanish army and the Spanish Civil War Military Deception and Strategic Surprise! John Gooch, Amos Perlmutter, 2012-11-12 Published in 2004 Military Deception and Strategic Surprise is a valuable contribution to the field of Military and Strategic Studies Flying Man Richard Byers, 2016-11-17 Hugo Junkers 1859-1935 was a German engineer and aircraft designer generally credited as the pioneer of all metal airplanes His company Junkers Flugzeug und Motorenwerke AG more commonly referred to simply as Junkers became a major German aircraft manufacturer based in Dessau From humble beginnings producing boilers and radiators by World War II the company was producing some of the most successful Luftwaffe planes including the Ju 88 the primary bomber of the German air force Hugo Junkers himself however was a socialist pacifist who saw aviation as a way to unify the world Soon after the Nazi party came to power in 1933 Junkers was forced to surrender his patents found his holdings seized by the state and was placed under house arrest He died in 1935 a tortured genius exiled from his life's work but perhaps fortunately spared from seeing his inventions destructively unleashed across Europe No biography of Junkers has been published to date Author Richard Byers now fills that void with this compelling narrative of a man and his machines Flying Man is a contribution not only to the history of aviation but also adds to our understanding of the consolidation of power in Germany's march toward World War II *The Race for Hitler's X-Planes* John Christopher, 2012-10-01 During World War 2 Hitler's engineers had pioneered an incredible array of futuristic secret weapons from the Me 262 the first operational jet fighter to the deadly V2 intercontinental ballistic missile With the Third Reich shattered and lying in ruins in the summer of 1945 the Allies launched a frantic race to grab what they saw as the justifiable spoils of war The Americans and Russians in particular were anxious to secure not only the aircraft and the research and production facilities but also the key German scientists and engineers This Nazi technology would define the balance of power in the phoney peace of the Cold War era launching an arms race that shaped our modern world for decades to come But what of Britain's role in this supermarket sweep The Race for Hitler's X-Planes tells the untold story of the British mission to Germany Aces of the Legion Condor Robert Forsyth, 2012-01-20 For Germany the Spanish Civil War proved a perfect testing ground for new technologies and tactics During the war some 19 000 German volunteers formed an aviation group called the Legion Condor in support of the fascists Originally flying He 51s they were soon upgraded to 109s These fighters proved dominant in the Spanish skies and many members of the legion scored five or more

kills during the fighting

Courage: The U.S. Army Air Forces in World War II, **Military Air Power in Europe Preparing for War** Norman Ridley, 2023-01-24 The First World War had seen the mechanization of warfare Battle fronts had become immobilized in the grip of machine guns and heavy artillery leading to slaughter on an unprecedented scale The end of the war saw exhausted governments extricating themselves from the carnage but some leaders were concerned that sooner or later another major war would follow As France's Marshal Foch put it the Treaty of Versailles was only a twenty year truce The overriding concern was to find ways in future of avoiding the kind of static battle fronts that had consumed so many in such futile efforts Military aviation was seen as the one great innovation that had the potential to do this by revolutionizing warfare It would not only augment the effectiveness of ground forces in a tactical role but it also had the means of reaching out strategically beyond the battlefronts to strike at the enemy's trade supplies communications and industrial production All through the war military aviation had been firmly under the control of army commanders but there was soon a fierce debate over the way it should develop The development of an air doctrine within each of the major European powers was fraught with difficulty as the nascent air arms struggled with varying degrees of success to free themselves from army control to find a new independent identity This book examines the way in which these air arms competed for prominence within the military structures of six major European nations Germany Britain France Soviet Union Poland and Italy with different resources ambitions and philosophies in the years from the beginning of aviation right up to the start of the Second World War *The Luftwaffe* James S. Corum, 1997 This study provides an appraisal of Germany's air forces from the post World War I era through the early stages of World War II The author demolishes several myths surrounding the Luftwaffe including the belief that they had no ideas beyond the support of ground forces **Enduring the Whirlwind** Gregory Liedtke, 2016-09-19 Despite the best efforts of a number of historians many aspects of the ferocious struggle between Nazi Germany and the Soviet Union during the Second World War remain obscure or shrouded in myth One of the most persistent of these is the

notion largely created by many former members of its own officer corps in the immediate postwar period that the German Army was a paragon of military professionalism and operational proficiency whose defeat on the Eastern Front was solely attributable to the amateurish meddling of a crazed former Corporal and the overwhelming numerical superiority of the Red Army. A key pillar upon which the argument of German numerical weakness vis vis the Red Army has been constructed is the assertion that Germany was simply incapable of providing its army with the necessary quantities of men and equipment needed to replace its losses. In consequence as their losses outstripped the availability of replacements German field formations became progressively weaker until they were incapable of securing their objectives or eventually of holding back the swelling might of the Red Army. This work seeks to address the notion of German numerical weakness in terms of Germany's ability to replace its losses and regenerate its military strength and assess just how accurate this argument was during the crucial first half of the Russo German War June 1941 June 1943. Employing a host of primary documents and secondary literature it traces the development and many challenges of the German Army from the prewar period until the invasion of the Soviet Union in June 1941. It continues on to chart the first two years of the struggle between Germany and the Soviet Union with a particular emphasis upon the scale of German personnel and equipment losses and how well these were replaced. It also includes extensive examinations into the host of mitigating factors that both dictated the course of Germany's campaign in the East and its replacement and regeneration capabilities. In contrast to most accounts of the conflict this study finds that numerical weakness being the primary factor in the defeat of the Ostheer specifically as it relates to the strength and condition of the German units involved has been overemphasized and frequently exaggerated. In fact Germany was actually able to regenerate its forces to a remarkable degree with a steady flow of fresh men and equipment and German field divisions on the Eastern Front were usually far stronger than the accepted narratives of the war would have one believe.

[The Blitzkrieg Legend](#) Karl-Heinz Frieser, 2013-04-11. Here for the first time in English is an illuminating new German perspective on the decisive Blitzkrieg campaign of 1940. Karl Heinz Frieser's account provides the definitive explanation for Germany's startling success and the equally surprising and rapid military collapse of France and Britain on the European continent. In a little over a month Germany decisively defeated the Allies in battle a task that had not been achieved in four years of brutal fighting during World War I. First published in 1995 as the official German history of the 1940 campaign in the west the book goes beyond standard explanations to show that German victory was not inevitable and French defeat was not preordained. Contrary to the usual accounts of the campaign Frieser illustrates that the military systems of both Germany and France were solid and that their campaign planning was sound. The key to victory or defeat he argues was the execution of operational plans both preplanned and ad hoc amid the eternal Clausewitzian combat factors of friction and the fog of war. Frieser shows why on the eve of the campaign the British and French leaders had good cause to be confident and why many German generals were understandably concerned that disaster was looming for them. This study

explodes many of the myths concerning German Blitzkrieg warfare and the planning for the 1940 campaign A groundbreaking new interpretation of a topic that has long interested students of military history it is being published in cooperation with the Association of the U S Army **The Sources of Military Doctrine** Barry Posen,1984 Barry R Posen explores how military doctrine takes shape and the role it plays in grand strategy that collection of military economic and political means and ends with which a state attempts to achieve security Posen isolates three crucial elements of a given strategic doctrine its offensive defensive or deterrent characteristics its integration of military resources with political aims and the degree of military or operational innovation it contains He then examines these components of doctrine from the perspectives of organization theory and balance of power theory taking into account the influence of technology and geography Looking at interwar France Britain and Germany Posen challenges each theory to explain the German Blitzkrieg the British air defense system and the French Army s defensive doctrine often associated with the Maginot Line This rigorous comparative study in which the balance of power theory emerges as the more useful not only allows us to discover important implications for the study of national strategy today but also serves to sharpen our understanding of the origins of World War II **Catalog of Copyright Entries.
