**Risk Analysis and Reduction in the Chemical Process Industry** J.M. Santamaría Ramiro, P.A. Braña Aísa, 2012-12-06

Concern for the environment has become one of the big issues in modern society and one of the chief concerns is the environmental impact of modern industrial production. A particularly sensitive issue is the possibility of accidents in industries where there may be severe consequences for people, property and the environment. At one time the nuclear industry was seen as the most likely to be the cause of significant environmental damage but after the occurrence of several major accidents such as Seveso, Flixborough and Bhopal that concern extends to much of the chemicals industry. Pressure from society reflected by strong legislation coupled with a greater understanding of the impact that chemical processing operations can have has led to the adoption of higher profile safety and environmental management programs within the chemical industry. Under these programmes existing and new processes are rigorously examined to determine the possible causes and consequences of failure and the results used to improve the process to make failure less likely. Any process audit aimed at improving safety or lessening the environmental impact cannot be carried out using intuition or experience alone so the discipline of risk analysis has grown as a collection of tools and methods which can be utilized to give a quantitative assessment of the risks involved in operating any given process. In this new book the authors present risk analysis and reduction in a clear and unified way emphasizing the various different methods which can be used together in a global approach to risk analysis in the chemical process industries. Originally conceived as a text book for graduate level courses in chemical engineering the clear presentation and thorough coverage will ensure that anyone involved in risk assessment, environmental impact assessment or safety planning will find this book an invaluable source of reference.

**Risk Assessment and Risk Management for the Chemical Process Industry** Stone & Webster Engineering Corporation, 1991-09-03

The tragic incident at Bhopal, India made it clear that safety reviews for identification and control of accidents involving toxic chemicals must be more systematic. This guide shows how to integrate hazard identification, risk assessment, consequence analysis and risk mitigation into a formalized program for handling hazardous chemicals. Most of the 21 contributors are senior staff members at Stone Webster Engineering Corporation. They discuss how to perform and supervise safety studies for chemical, petrochemical, petroleum refining and other facilities. They discuss all aspects of detection, prevention and mitigation of risks associated with processing, handling and production of hazardous chemicals. Special attention is given to hazard identification and hazard assessment techniques ranging from simple screening checklists to highly structured Hazard and Operability (HAZOP) analysis. You are shown how to calculate potential consequences of identified hazards, quantify the likelihood of these events and combine equipment failure rate data and human reliability analysis with hazard assessment. You will also benefit from the book's rundowns of how to apply expert systems and artificial intelligence in risk management, instill safety oriented operating and maintenance procedures, train operators and emergency response.
