## **Risk And Medical Decision Making:**

Risk and Medical Decision Making Louis Eeckhoudt, 2002-04-30 For people interested in risk management medical activity represents a stimulating field of study and thought On the one hand progress in medical knowledge and technology tends to reduce the risks to survival that individuals would face in the absence of appropriate diagnostic or therapeutic instruments On the other hand new medical technologies simultaneously create their own specific risks sometimes simply because their effects are less well known than those of established ones In a sense any medical progress simultaneously generates new risks while destroying old ones Moreover unlike many financial risks that can be either divided or transferred to others e g through diversification insurance or social security the personal aspects of medical risks are by essence indivisible and non transferable As a result they are in a sense more threatening than financial risks for risk averse patients These two facts explain and justify the growing interest in risk economics for the fields of medical decision making and health economics In Risk and Medical Decision Making part 1 is developed inside the expected utility E U model and analyses how comorbidity risks affect the well known test treatment thresholds Part 2 is devoted to a specific non E U model with the same purpose how would one define a threshold in this context and how would one value a diagnostic test In each of these two parts both diagnostic and therapeutic risks are considered

**Encyclopedia of Medical Decision Making** Michael W. Kattan, 2009-08-15 Decision making is a critical element in the field of medicine that can lead to life or death outcomes yet it is an element fraught with complex and conflicting variables diagnostic and therapeutic uncertainties patient preferences and values and costs Together decisions made by physicians patients insurers and policymakers determine the quality of health care quality that depends inherently on counterbalancing risks and benefits and competing objectives such as maximizing life expectancy versus optimizing quality of life or quality of care versus economic realities Broadly speaking concepts in medical decision making MDM may be divided into two major categories prescriptive and descriptive Work in the area of prescriptive MDM investigates how medical decisions should be done using complicated analyses and algorithms to determine cost effectiveness measures prediction methods and so on In contrast descriptive MDM studies how decisions actually are made involving human judgment biases social influences patient factors and so on The Encyclopedia of Medical Decision Making gives a gentle introduction to both categories revealing how medical and healthcare decisions are actually made and constrained and how physician healthcare management and patient decision making can be improved to optimize health outcomes Key Features Discusses very general issues that span many aspects of MDM including bioethics health policy and economics disaster simulation modeling medical informatics the psychology of decision making shared and team medical decision making social moral and religious factors end of life decision making assessing patient preference and patient adherence and more Incorporates both quantity and quality of life in optimizing a medical decision Considers characteristics of the decisionmaker and how those characteristics influence their decisions Presents outcome measures to

judge the quality or impact of a medical decision Examines some of the more commonly encountered biostatistical methods used in prescriptive decision making Provides utility assessment techniques that facilitate quantitative medical decision making Addresses the many different assumption perspectives the decision maker might choose from when trying to optimize a decision Offers mechanisms for defining MDM algorithms With comprehensive and authoritative coverage by experts in the fields of medicine decision science and cognitive psychology and healthcare management this two volume Encyclopedia is a must have resource for any academic library

**Medical Decision Making** Stefan Felder, Thomas Mayrhofer, 2011-07-22

This textbook offers a comprehensive theory of medical decision making under uncertainty combining informative test theory with the expected utility hypothesis The book shows how the parameters of Bayes theorem can be combined with a value function of health states to arrive at informed test and treatment decisions The authors distinguish between risk neutral risk averse and prudent decision makers and demonstrate the effects of risk preferences on physicians decisions They analyze individual tests multiple tests and endogenous tests where the test result is determined by the decision maker Finally the topic is examined in the context of health economics by introducing a trade off between enjoying health and consuming other goods so that the extent of treatment and thus the potential improvement in the patient's health become endogenous

**Data Mining to Determine Risk in Medical Decisions** Patricia B. Cerrito, 2011-11-15

Decisions regarding the risks involved in medical treatments must belong to patients and their physicians after all it is the patient's health and life which is at stake But patients will not be equipped for this decision making process if they cannot be given some idea as to the risks and benefits of treatment Such risks are generally estimated by a consensus panel of specialist physicians using supporting medical literature Unfortunately this literature does not always provide a good estimate of risk particularly in the case of rare occurrences This book demonstrates statistical techniques that can be used to investigate matters of risk These include kernel density estimation predictive modeling association rules and text analysis It also shows through example how these techniques can provide meaningful results and examines current methods discussing some of the flaws in models which may lead to misleading results After a general introduction to the concept of medical risk the subjects covered include the process by which rare occurrences are investigated in drugs or treatments the trade offs between risks and benefits extrapolation of clinical trial results and the cost of healthcare in relation to risks It also examines problems such as competing risks error and the use of group identities as well as looking at the issue of futility The book concludes with a chapter providing a general discussion and summary and an appendix shows some of the processes for using SAS Enterprise Miner to perform some of the models used in the text

**Medical Decision Making** Alan Schwartz, George Bergus, 2008-05-26

Decision making is a key activity perhaps the most important activity in the practice of healthcare Although physicians acquire a great deal of knowledge and specialised skills during their training and through their practice it is in the exercise of clinical judgement and its application to individual patients that the outstanding physician is distinguished This has become even

more relevant as patients become increasingly welcomed as partners in a shared decision making process This book translates the research and theory from the science of decision making into clinically useful tools and principles that can be applied by clinicians in the field It considers issues of patient goals uncertainty judgement choice development of new information and family and social concerns in healthcare It helps to demystify decision theory by emphasizing concepts and clinical cases over mathematics and computation
