Evaluation of Guidelines for Exposures to Technologically Enhanced Naturally Occurring Radioactive Materials National Research Council, Division on Earth and Life Studies, Commission on Life Sciences, Committee on Evaluation of EPA Guidelines for Exposure to Naturally Occurring Radioactive Materials, 1999-01-25 Naturally occurring radionuclides are found throughout the earth's crust and they form part of the natural background of radiation to which all humans are exposed Many human activities such as mining and milling of ores extraction of petroleum products use of groundwater for domestic purposes and living in houses alter the natural background of radiation either by moving naturally occurring radionuclides from inaccessible locations to locations where humans are present or by concentrating the radionuclides in the exposure environment Such alterations of the natural environment can increase sometimes substantially

radiation exposures of the public Exposures of the public to naturally occurring radioactive materials NORM that result from human activities that alter the natural environment can be subjected to regulatory control at least to some degree The regulation of public exposures to such technologically enhanced naturally occurring radioactive materials TENORM by the US Environmental Protection Agency EPA and other regulatory and advisory organizations is the subject of this study by the National Research Council's Committee on the Evaluation of EPA Guidelines for Exposures to Naturally Occurring Radioactive Materials **Reexamining the Scientific Basis for the Linear No-threshold Model of Low-dose Radiation** United States. Radioactive Waste Management ,1995-04 Man-Made and Natural Radioactivity in Environmental Pollution and Radiochronology Richard Tykva,Dieter Berg,2004-01-31 The goal of this book is to examine the complex state of radioactivity in the environment and to understand the interplay of its two principal sources man made and natural The text examines human contributions to release of radionuclides with an eye to future reductions and assesses natural occurrences in an evaluation of baseline radioactivity Human and Ecological Risk Assessment Dennis J. Paustenbach,2024-04-15 Understand the fundamentals of human risk assessment with this introduction and reference Human risk assessments are a precondition for virtually all industrial action or environmental regulation all the more essential in a world where chemical and environmental hazards are becoming more abundant These documents catalog potential environmental toxicological ecological or other harms resulting from a particular hazard from chemical spills to construction projects to dangerous workplaces They turn on a number of variables of which the most significant is the degree of human exposure to the

hazardous agent or process Human and Ecological Risk Assessment combines the virtues of a textbook and reference work to introduce and analyze these vital documents Beginning with the foundational theory of human health risk assessment it then supplies case studies and detailed analysis illustrating the practice of producing risk assessment documents Fully updated and authored by leading authorities in the field the result is an indispensable work Readers of the second edition of Human and Ecological Risk Assessment will also find Over 40 entirely new case studies reflecting the latest in risk assessment practice Detailed discussion of hazards including air emissions contaminated food and soil hazardous waste sites and many more Case studies from multiple countries to reflect diverse international standards Human and Ecological Risk Assessment is ideal for professionals and advanced graduate students in toxicology industrial hygiene occupational medicine environmental science and all related subjects

Radiation Protection Management ,1995 *Environmental Radiation Effects on Mammals* Olga A.

Smirnova,2010-12-17 Themonographisdevotedtothetheoreticalstudiesofradiationeffectsonmammals It summarizes the results obtained by the author over the past 30 years most of them being of high priority In the course of these studies a single approach to the modeling of radiation effects on mammals has been elaborated Specically in the framework of the developed deterministic mathematical models the effects of both acute and chronic irradiation in a wide range of doses and dose rates on vital body systems hematopoiesis small intestine and humoral immunity as well as on the development of autoimmune diseases are investigated The radiation effects on the mortality dynamics in homogeneous and nonhomogeneous in radiosensitivity mammalian populations are also studied by making use of the developed stochastic models The most appealing feature of these mortality models consists of the fact that they account for the intrinsic properties of the exposed organism Namely within these models the stochastic biometrical functions are calculated proceeding from statistical characteristics and dynamics of the respective critical body system hematopoiesis or small intestine The performed theoretical investigations contribute to the development of the system and quantitative approaches in radiation biology and ecology These studies elucidate the major regulatory mechanisms of the damage and recovery processes running in the vital body systems of exposed mammals and reveal the key parameters characterizing the processes

Trace Elements in Terrestrial Environments Domy C. Adriano,2013-03-19 Knowledge is not to be sought for the pleasures of the mind or for contention or for superiority to others or for profit or fame or power or any of these inferior things but for the benefit and use of life Sir Francis Bacon Based on citations in the literature it is evident the first edition entitled Trace Elements in the Terrestrial Environment 1986 met its primary objective which was to provide students and professionals with a comprehensive book in many important aspects of trace elements in the environment Indeed the extent of its use has exceeded my

expectations As a result of its usefulness and encouragement by colleagues in the field I was compelled to write this edition following a similar format but including new chapters on biogeochemistry bioavailability environmental pollution and regulation ecological and human health effects and risk and risk management and expanding the coverage to include freshwater systems and groundwater where appropriate In addition to plants which was the main biota of emphasis in the earlier edition fish and wildlife and invertebrates both terrestrial and aquatic are discussed as necessary The ecological and human health effects of major environmental contaminants such as As Cd Cr Pb and Hg are also highlighted along with relevant information on potential risks to the ecology and human health

Risk Assessment for Neurobehavioral Toxicity Bernard Weiss, Jürg Elsner, 1997-07 After three decades of research neurobehavioral toxicity is now acknowledged as a significant outcome of chemical exposure Its health and economic costs may exceed those by cancer by substantial amounts This new perspective has been accompanied by efforts designed to explore the responsible mechanisms to design applicable risk assessment procedures and to determine the consequent policy implications This publication includes 25 papers from international experts and includes human neurobehavioral toxicity animal behavioral methods selected model compounds and risk assessment

Imaging Practice and Radiation Protection in Pediatric Radiology Michael Seidenbusch, Veronika Rösenberger, Karl Schneider, 2019-12-05 This book offers the reader sound advice on how to perform optimal conventional pediatric radiographs and how to obtain quick and easy organ dose estimates in order to improve the optimization process in pediatric imaging Clear guidelines are provided for minimization of the radiation exposure of children through optimization of the radiation exposure conditions and conversion coefficients are presented for calculation of the organ doses achieved in organs and tissues during conventional pediatric radiography taking into consideration both optimal and suboptimal radiation field settings Previously published conversion coefficients have failed to represent the variation in radiation field settings in daily clinical routine which has made it difficult for the pediatric radiologist to estimate the impact of the field settings on absorbed doses in organs and tissues The aim of this book co written by a pediatric radiologist a physician and physicist and a medical radiation technologist is to address this issue by providing for the first time a thorough overview of clinical radiation field settings and their implications for radiation protection An accompanying volume is devoted to fluoroscopy

Diagnostic Nuclear Medicine David I. Hamilton, 2013-11-11 In the development of many medical technologies the beginning is characterised by an emphasis on the basic scientific principles of the technology and the optimisation of the functional aspects of the technology As a technology matures there is a tendency for the underlying principles to be forgotten as the clinical applications begin to develop and the focus moves to an understanding of the clinical application This maturity brings with it new challenges for those involved in the use of the technology An acceptance of the methodology may lead to a scaling back of the basic training of staff into the fundamentals of the techniques and lead to a lack of questioning as to those issues which lead to the optimisation in clinical applications This lack of basic training may

ultimately lead to a stifling of research and development of the technology as a whole as trained staff becomes a scarce commodity Nuclear medicine is no exception to this development cycle As a medical specialty the discipline has matured The basic imaging technology has become more reliable in everyday use requiring less input from scientific staff Clinical procedures have become protocols which are often followed without due understanding of the basic principles underlying the imaging procedure This is clearly demonstrated when new radiopharmaceuticals are introduced into the marketplace
