

Introduction

- The risks to human health posed by ionizing radiation are well known.
- Radon gas is by far the most important source of ionizing radiation among those that are of natural origin.
- It is a gas formed from radium (^{226}Ra), which is a decay product of Uranium (^{238}U), emanates from rocks and soils and tends to concentrate in enclosed spaces like underground mines or houses.

Risks From Radium And Thorotrast:

Annual Report National Cancer Institute (U.S.). Division of Cancer Etiology, 1989 **Journal of the National Cancer Institute** , 1992-07 Each issue is packed with extensive news about important cancer related science policy politics and people Plus there are editorials and reviews by experts in the field book reviews and commentary on timely topics **The Million Person Study of Low-Dose Radiation Health Effects** John D. Boice Jr, André Bouville, Lawrence T. Dauer, Ashley P. Golden, Richard Wakeford, 2024-11-25 This book presents original research findings of The Million Person Study of Low Dose Radiation Health Effects MPS the largest and most comprehensive epidemiologic study of its kind to investigate the health effects of low level chronic radiation exposure on American workers and veterans throughout the 20th century Since the early 1900s epidemiologists have studied the consequences of radiation exposures yet the health effects of low levels received gradually over time remain unresolved This uncertainty comes at a time when the public and workers are experiencing ever increasing levels of radiation exposure from advances in medical radiation imaging techniques e g CT scans frequent flying at high altitudes and environmental and occupational exposures The MPS is providing answers by studying 30 radiation exposed U S populations including workers at nuclear power plants radiologists workers at former Manhattan Project sites nuclear submariners nuclear weapons test participants atomic veterans industrial radiographers and radium dial painters Ongoing for more than 20 years and coordinated by the National Council on Radiation Protection and Measurements Vanderbilt University Medical Center and Memorial Sloan Kettering Cancer Center the MPS is a national effort supported by the Department of Energy National Aeronautics and Space Administration U S Navy Defense Threat Reduction Agency Nuclear Regulatory Commission Centers for Disease Control and Prevention and the Environmental Protection Agency Unparalleled in scope and quality the MPS provides an understanding of low dose health effects that is desperately needed for decision makers and the radiation protection community as society continues to increase the uses of radiation technologies Individual chapters were originally published in the International Journal of Radiation Biology

Ionizing Radiation Risk Assessment , 1991 **Energy Research Abstracts** , 1990 Medical Effects of Ionizing Radiation Fred A. Mettler, Arthur C. Upton, 1995 The new edition of this monograph features renowned experts who offer the most current information and reliable guidance on all aspects of the effects of radiation exposure on humans They provide the answers you need to effectively treat your patients who have been exposed to accidental occupational or medical radiation **BOOK JACKET** *Cancer Epidemiology and Prevention* David Schottenfeld, Joseph F. Fraumeni Jr., 2006-08-24 This much anticipated Third Edition provides a comprehensive presentation of the global burden and patterns of cancer occurrence along with new developments in our understanding of cancer causation and prevention Special attention is given to epidemiologic approaches that incorporate molecular biomarkers based on genomic and other emerging technologies providing new insights into the role of genetic predisposition and gene environment interactions in cancer induction In

addition new chapters are included on social class disparities in cancer incidence and mortality the role of obesity and physical inactivity in cancer etiology the potential effects of electromagnetic fields and radiofrequency radiation and the principles of cancer chemoprevention The textbook is organized into five sections Basic Concepts The Magnitude of Cancer The Causes of Cancer Cancer by Tissue of Origin Cancer Prevention and Control In this new edition Drs David Schottenfeld and Joseph F Fraumeni Jr have enlisted three distinguished Associate Editors Drs Jonathan Samet of Johns Hopkins University Graham Colditz of Harvard University and Alice Whittemore of Stanford University

Radiation Pathology Luis Felipe Fajardo, Morgan Berthrong, Robert E. Anderson, 2001-01-25 Radiation Pathology is an up to date compendium of the effects of ionizing radiation on human tissues It will be of great value to radiation oncologists pathologists and other professionals The early chapters deal with basic science physics radiobiology genetics etc The circumstances of human exposures therapeutic accidental warfare are then considered in the light of extensive epidemiological data Acute radiation syndromes and radiation cardiogenesis are described in detail including recent information on mechanisms of oncogenesis For the benefit of readers who are not radiation oncologists two chapters outline the current uses of radiation in therapy and in diagnosis including the various applications of radionuclides The bulk of the text deals with radiopathology and its morphologic expression An overview orients the reader and classifies the main types of lesions The chapters on specific organs or organ systems are consistently divided into sections to facilitate rapid retrieval of information on normal structure tolerance doses experimental studies morphology and pathogenesis and clinical manifestations The authors lucid well organized descriptions will inform radiation oncologists about the types of injury to be expected and will guide pathologists in making differential diagnoses

Cancer Risks Peter Bannasch, 2012-12-06 A large body of information about possible causes of cancer has been accumulated by both clinical experience in man and observations in animal experiments There is general agreement that in most cases cancer is due to exogenous factors albeit the genetic disposition may also play an important part Three main categories of exogenous risk factors have been identified namely chemicals radiation and viruses In principle it should be possible to prevent cancer by eliminating such risk factors However in spite of the rapidly growing number of well established risk factors many shortcomings in our understanding of the causes of human cancer and in the introduction of effective preventive measures are evident In addition to obvious gaps in our scientific knowledge inadequacies in personal life style irresponsible handling of environmental contaminants and in some areas also deficiencies in political decisions seriously hamper the elimination of risk factors for cancer It was this background which prompted the Committee coordinating Cancer Research in the GroBforschungseinrichtungen in the Federal Republic of Germany to organize a conference on Strategies for the Elimination of Cancer Risks The conference was held in Heidelberg in June 1986 In areas which appeared to be especially pertinent

to public health authoritative speakers presented the state of the art and prepared the basis for the discussion Both the presentations of the speakers and the summaries of the discussions are contained in this book **Liver Cancer Risk from Internally-deposited Radionuclides** National Council on Radiation Protection and Measurements,2000 Assessing Risks of Exposure to Plutonium Helen A. Grogan,2000 Health Risks of Radon and Other Internally Deposited Alpha-Emitters National Research Council,Division on Earth and Life Studies,Commission on Life Sciences,Committee on the Biological Effects of Ionizing Radiations,1988-02-01 This book describes hazards from radon progeny and other alpha emitters that humans may inhale or ingest from their environment In their analysis the authors summarize in one document clinical and epidemiological evidence the results of animal studies research on alpha particle damage at the cellular level metabolic pathways for internal alpha emitters dosimetry and microdosimetry of radionuclides deposited in specific tissues and the chemical toxicity of some low specific activity alpha emitters Techniques for estimating the risks to humans posed by radon and other internally deposited alpha emitters are offered along with a discussion of formulas models methods and the level of uncertainty inherent in the risk estimates **Annual Report, Intramural Activities** National Cancer Institute (U.S.). Division of Cancer Etiology,1987 **Published Scientific Papers of the National Institutes of Health** National Institutes of Health (U.S.),1990 *Extrapolation of Radiation-induced Cancer Risks from Nonhuman Experimental Systems to Humans* National Council on Radiation Protection and Measurements,2005 **New Research Directions in DNA Repair** Clark Chen,2013-05-22 This book is intended for students and scientists working in the field of DNA repair Select topics are presented here to illustrate novel concepts in DNA repair the cross talks between DNA repair and other fundamental cellular processes and clinical translational efforts based on paradigms established in DNA repair The book should serve as a supplementary text in courses and seminars as well as a general reference for biologists with an interest in DNA repair **Study of Mortality Among Female Nuclear Weapons Workers** ,2000 Health Effects of Low-level Radiation Sohei Kondo,1993 **Liquid Metal Fast Breeder Reactor Program: Appendix.
