C. Layek, 2024-02-23 This book discusses continuous and discrete nonlinear systems in systematic and sequential approaches

The unique feature of the book is its mathematical theories on flow bifurcations nonlinear oscillations Lie symmetry analysis of nonlinear systems chaos theory routes to chaos and multistable coexisting attractors The logically structured content and sequential orientation provide readers with a global overview of the topic A systematic mathematical approach has been adopted featuring a multitude of detailed worked out examples alongside comprehensive exercises The book is useful for courses in dynamical systems and chaos and nonlinear dynamics for advanced undergraduate graduate and research students in mathematics physics and engineering The second edition of the book is thoroughly revised and includes several new topics center manifold reduction quasi periodic oscillations Bogdanov Takens periodbubbling and Neimark Sacker bifurcations and dynamics on circle The organized structures in bi parameter plane for transitional and chaotic regimes are new active research interest and explored thoroughly The connections of complex chaotic attractors with fractals cascades are explored in many physical systems Chaotic attractors may attain multiple scaling factors and show scale invariance property Finally the ideas of multifractals and global spectrum for quantifying inhomogeneous chaotic attractors are discussed

Time Travel David Wittenberg, 2016-01-01 This stimulating contribution to literary theory reveals the deeply philosophical concerns and developments behind popular time travel sci fi London Review of Books In Time Travel literary theorist David Wittenberg argues that time travel fiction is not mere escapism but a narrative laboratory where theoretical questions about storytelling and by extension about the philosophy of temporality history and subjectivity are presented in story form Drawing on physics philosophy narrative theory psychoanalysis and film theory Wittenberg links innovations in time travel fiction to specific shifts in the popularization of science from nineteenth century evolutionary biology to twentieth century quantum physics and more recent multiverse cosmologies Wittenberg shows how popular awareness of new science led to surprising innovations in the literary time machine which evolved from a vehicle used for sociopolitical commentary into a psychological device capable of exploring the temporal structure and significance of subjects viewpoints and historical events Time Travel draws on classic works of science fiction by H G Wells Edward Bellamy Robert Heinlein Samuel Delany and Harlan Ellison television shows such as The Twilight Zone and Star Trek and other popular entertainments These are read alongside theoretical work ranging from Einstein Schrödinger Stephen Hawking to Gérard Genette David Lewis and Gilles Deleuze Wittenberg argues that even the most mainstream audiences of popular time travel fiction and cinema are vigorously engaged with many of the same questions about temporality identity and history that concern literary theorists media and film scholars and philosophers
